Acknowledgements
This thesis is the result of research in the development of a dental diagnostic terminology. These acknowledgments recognize the help, friendship, cooperation and collaboration of everyone involved in making this thesis and the research a reality.

The starting point of this study was a request by the EHR implementation team at the Harvard School of Dental Medicine, led by Mrs. Mary Cassesso, to include diagnostic terms into the electronic health record. Mary, thank you for your unwavering support that diagnosis should inform treatment, in dentistry as in medicine.

Prof. dr. Albert J. Feilzer. Albert you recognized the importance of the early research and encouraged the involvement of ACTA as one of the research sites. Thank you for believing in me, your friendship and the excellent support you have provided me as my promoter. Our many conversations over the months have been enlightening and provocative. I look forward to continuing the HSDM ACTA relationship.

Prof. R. Bruce Donoff. Dear Bruce, thank you for functioning as my co-promoter and providing ongoing encouragement. As domain expert and early user of the EZCodes you tirelessly offered suggestions for improvement and I truly appreciate your support of and belief in moving dentistry to becoming diagnostic centric.

Dr. Rachel B. Ramoni. Dear Rachel, we met during the first week I started at HSDM and we never stopped writing (and receiving) grants since. Your exceptional intelligence, analytical skills, and ability to develop a concise, exceptional scientific proposal is unmatched by most and assures that it takes our research to the next level. Your friendship and support means a lot to me. It is such a pleasure introducing you to the Dutch dissertation process as my paranimf.

Prof. Joel M. White. Dear Joel, the research team wouldn’t be the same without you. Your real-world clinical insights keep the research team focused on creating a practical terminology. Your warmth and friendship were indispensable for the development of the team and your counsel means a lot to me.

Dr. Muhammad F. Walji. Dear Muhammad, the world of dental informatics is so lucky to have you. You are the kindest and at the same time super smart bio-medical informatician I know and the research project benefitted greatly from your knowledge. It is an absolute pleasure working with you.
Dr. Maxim D. Lagerweij. Dear Maxim, in your own quiet way you are able to bring up important issues the research team might otherwise not have considered. I truly appreciate that. Thank you for translating my Dutch summary into real Dutch. I guess I have to finally admit that Dutch is not my primary language anymore.

Additional members of the research team, Drs. Bunmi Tokede, Drs. Nici Kimmens, Drs. Ram Vaderhobli, Prof.dr. Paul Stark, Ted de Vries, Ryan Brandon and the research assistants who participated for weeks or months at a time. Thank you all for your hard work, support and putting up with me. Bunmi, you are amazing. Your tenaciousness made the terminology the best it could be. Nici, your in-depth clinical knowledge was invaluable for our clinical scenario development. Your upbeat disposition made even the most tedious job seems doable. Ram, you kept us on even keel. Paul, your statistical expertise is amazing. Ted and Ryan, if only all EHR vendors were like you.

Prof.dr. G.H.W. Verrips, Prof.dr. D. Wismeyer, Prof. J.M. White, Prof.dr. F.R. Rozema, and Prof.dr. G.J.M.G. van der Heijden. As Members of the Doctorate Committee I thank you for the critical review of my thesis. Prof.dr. J.M. ten Cate thank you for acting as chair of my thesis committee.

The (former) students and faculty members of HSDM, ACTA and UCSF. Thank you for participating in our research project. Your cooperation and feedback were invaluable to the success of this research project.

Drs. Caroline Hoving-Boot. Dear Caroline, as one of my oldest and dearest girlfriends I am delighted you are my paranimf. Thank you for your friendship through all these years and across the miles.

Deidre and Josh. You are my steadfast fans, always telling me that I can do what I put my mind to. Thank you for your love, interest and genuine concern when the workload became a bit much. Dee, you did a yeoman’s job changing my English into proper English, and teaching me many of the language rules along the way. I will try to remember them. Josh, thank you for your sweet texts and unexpected calls, just when I needed them most.

Dear Jerry, I could not have done it without you. You made it possible for me to work long hours, supporting me every step of the way, including moving our house all by
yourself. I look forward spending my newly found time truly enjoying our new home together.
And the day came
When the risk
To remain tight in
A bud
Was more painful
Than the risk it took
To blossom

Anais Nin
