In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

CONTENTS

PREFACE	7
INTRODUCTION AND SUMMARY	10
I EVOLUTION OF HELIUM STARS: A SELF-CONSISTENT DETERMINATION OF THE BOUNDARY OF A HELIUM BURNING CONVECTIVE CORE.	13
1 Introduction	
2 The equations describing stellar evolution	
3 Starting model for the Henyey iterations	
4 Results	
5 Discussions	
Appendix	
II ROCHE-LOBE OVERFLOW IN X-RAY BINARIES	25
1 Introduction	
2 Refined considerations concerning Roche-lobe overflow	
3 Calculated rates of mass transfer	
4 Evidence for the occurrence of Roche-lobe overflow in X-ray binaries derived from the spin-up rates of Her X-1 and Cen X-3	
5 Concluding remarks	
Appendix I: Relation between the radius excess of the contact star and the mass transfer rate	72
Appendix II: The outer boundary conditions of the contact star	
Appendix III: The critical radius and the variations of the orbital parameters	
Figures 1 to 11	81
III ON THE ROTATIONAL HISTORY OF THE PULSARS IN MASSIVE X-RAY BINARIES	89
1 Introduction	
2 Types of tidal forces possible in the presupernova binary	
3 Application to helium stars	
4 Other slow-down mechanisms for neutron stars in massive close binaries	

IV THE EVOLUTIONARY HISTORY OF X-RAY BINARIES

93

1 Summary and introduction

2 Mass transfer mechanisms in X-ray binaries

3 Evolutionary information derived from the slow pulsars

4 Refinements in the evolutionary scenario of massive X-ray
binaries

5 Tidal evolution

SAMENVATTING
