1 INTRODUCTION  
1.1 Is transition just a historical concept?  
1.2 What drives economic growth?  
1.3 Have trade and FDI helped transition countries?  
1.4 The key to the difference: institutions

2 GROWTH IN TRANSITION: RE-EXAMINING THE ROLE OF FACTOR INPUTS AND GEOGRAPHY  
2.1 Summary  
2.2 Introduction  
2.3 Literature review  
2.4 The need for spatial economic models  
2.5 Data  
2.6 Estimation strategy  
2.7 Results  
2.8 Discussion

3 TECHNOLOGY TRANSFERS THROUGH FDI AND IMPORTS AND LABOUR PRODUCTIVITY IN THE CENTRAL AND EASTERN EUROPEAN COUNTRIES  
3.1 Introduction  
3.2 Literature review  
3.3 Choice of the theoretical model  
3.3.1 Solow-type model  
3.3.2 Endogenous growth model  
3.3.3 Bilaterally-weighted model (Coe and Helpman type model)  
3.4 Long-run vs. short-run relationships  
3.5 Estimation and data  
3.5.1 Econometric methodology  
3.6 Data  
3.7 Results  
3.8 Discussion and conclusions

4 RENT-SEEKING, STATE CAPTURE AND INSTITUTIONAL REFORM IN TRANSITION COUNTRIES  
4.1 Summary  
4.2 Introduction  
4.3 Rent-seeking and state capture in transition  
4.3.1 General considerations  
4.3.2 The case of Bulgaria
4.4 Related literature and modeling considerations ........................................ 48
  4.4.1 Political influence and lobbying .......................................................... 48
  4.4.2 Administrative corruption, lobbying and state capture .............................. 50
  4.4.3 Agent heterogeneity ............................................................................. 51
  4.4.4 Rent-seeking as a separate economic sector ........................................... 51
4.5 Stylized facts .............................................................................................. 52
  4.5.1 State capture index and Hellman’s stylized facts ....................................... 52
  4.5.2 Stylized facts with institutional measures ............................................... 53
  4.5.3 Inequality ............................................................................................... 54
4.6 The model setup ........................................................................................... 56
  4.6.1 The ﬁrms ............................................................................................... 56
  4.6.2 The households ...................................................................................... 58
    4.6.2.1 Workers ........................................................................................... 58
    4.6.2.2 Rent-seekers .................................................................................... 59
    4.6.2.3 Double rent-seeking ........................................................................ 60
    4.6.2.4 Double work .................................................................................... 60
    4.6.2.5 Rent-seek ﬁrst, work afterwards ...................................................... 60
  4.6.3 The equilibrium ...................................................................................... 61
    4.6.3.1 Arbitrage conditions ........................................................................ 61
    4.6.3.2 Capital market .................................................................................. 61
    4.6.3.3 Labor market .................................................................................... 62
    4.6.3.4 Prices ............................................................................................... 62
4.7 Endogenizing institutions ............................................................................. 64
4.8 Parameterization ......................................................................................... 66
4.9 Comparative statics .................................................................................... 68
  4.9.1 Initial institutional level .......................................................................... 69
  4.9.2 Initial capital ......................................................................................... 70
  4.9.3 Total factor productivity ....................................................................... 71
  4.9.4 Costs of political inﬂuence ..................................................................... 73
  4.9.5 Reform step .......................................................................................... 74
  4.9.6 Explanation of the stylized facts ............................................................. 75
  4.9.7 Rent-seeking ability S and the measure of potential rent-seekers ............. 76
4.10 Conclusions and discussion ....................................................................... 76

5 SUMMARY OF THE FINDINGS ..................................................................... 78
  5.1 On growth determinants............................................................................ 78
  5.2 On international economic linkages............................................................. 78
  5.3 and the role of institutions ........................................................................ 79

  5.3.1 What is left unexplained? ....................................................................... 80

APPENDICES
A. A short review of the cross-sectional spatial econometric models ............... 82
  A.1. Basic spatial dependence models ............................................................. 82
  A.2. Estimation methods ............................................................................... 83
