Acknowledgments.

Coming to the final end of this period, I cannot but realise what a great time I have spent during my PhD. This is, of course, a result of the great group I joined in 2009. A great group of great personalities and a lot of variety that has not only made me learn chemistry, but has given me lessons for life.

Bas, I have no words to show how grateful I feel for your guidance. From the beginning when you trusted me to join your group, until the very last details of my thesis, you have been a real mentor and it will never stop to surprise me how you can turn my very difficult questions into very simple answers. I admire you for your courage and enthusiasm to do science, but the most important is that during this time I have had the opportunity and the pleasure to work with a very human person. I would like to thank you for all the fruitful discussions and advises about my questions, issues and other problems (including the existential ones). Thanks for being a leader, more than only my boss, and thanks for giving me the opportunity of having one of the most important experiences in my life, my PhD in Amsterdam.

Joost, thanks for giving your critical point of view on my research. From the “mini-meetings” to the thesis, your comments were very useful to ponder upon conclusions. I really admire your way of motivating people and keeping our group colourful (referring to personalities); silence is your confronting weapon; I definitely have learned a lot from you.

Jarl, although at first sight I did not work directly with you, you contributed in great part to my research. Always with the funny and sometimes sarcastic comments, your sharp sense of humour has contributed to my work, but also to my way of thinking. I appreciate all the talks in the coffee corner; it was always so easy for me to talk to you. Thanks also for the great job with the corrections and for being part of my committee.

I would also like to thank Kees Elsevier, Evert Jan Meijer, Koop Lammertsma, and Sven Schneider for the great honour of being part on my promotion committee.

Piluka, ¿cómo agradecerte todo lo que me has dado? Creo que de todo, lo que más aprecio es que me enseñaste a ser joven de corazón, vivir la vida de forma positiva y que me brindaste tu compañía y amistad cuando llegué a mi aventura en el otro continente. Gracias por las aventuras en Diemen (algún día te haré que te guste andar en bici). Pero la historia no se acaba ahí, fue un placer ser compañeras de piso y qué buenos momentos pasamos en Plantage (como en familia). Espero que nuestra amistad nunca se acabe, porque estoy en deuda...
contigo. Gracias por abrirme las puertas de tu casa, pero sobre todo las de tu corazón. Ahh y por cierto, gracias por ser mi Paranymp!

Pawel, my other Paranymp, it was a real pleasure to share the free PhD time. I still remember that when you joined the group, you looked so innocent! Somehow, without talking much, we shared opinion and point of view of different topics, I appreciate and admire your pragmatic way of thinking and I am glad we shared so many science and life adventures. Thanks for all nice moments with the dinners in Plantage and going out (even though we were always ending up at “cocos”) with the French party buddies, Julien and Yann. I really think you are going to continue having fun and success in Germany. (But, don’t forget, I am still interested in the Polish guided tour.)

Sander, I am very glad we shared so many train talks (and saté krokets). I really appreciate your strong opinion and your will to give arguments, without all that our conversations about things in life could have not been so insightful, and of course funny. I guess, most of it, I enjoy your youthful way of seeing life and probably I saved many hours working in the lab because of your useful chemistry advises. I appreciate I found a real friend in you.

Fred, you are a very sweet but though guy that I am glad I met. I really admire your patience and dedication, but I also enjoyed a lot the nights of delicious dinners and game playing with you and Jacques. Tati, of course you deserve my gratitude, you always manage to listen to all my existential issues very early in the morning, I am glad we shared the quiet mornings talking about life. Rafa, aunque ya no fue tanto tiempo el que coincidimos en el lab, te convertiste en un amigo, gracias por escucharme todas las locuras y opiniones que siempre tengo que decir. Yasemin, I whish we could have gotten closer since you arrived, you are a really nice girl and definitely a person I like to talk to (you always have patience with my cultural curiosity). Markus, I enjoyed so much talking to you, always offering a different, but very human, point of view. Your funny remarks were always so much true, but besides you as human, I really admired you as a chemist, I think you are very good at looking at science.

Wojciech, thanks for being part of my committee. I think you are a chemist that has a talent, I am sure if you continue working as hard as you do, you will continue collecting success in your career, and please, never lose the charming smile you have (as when Piluka used to flatter you). Jana, it was really nice to share all the free time during the moving to Science Park, you were always so energetic and positive. Thanks also for the excellent guided Berlin tour, such an honour. I enjoyed our conversations a lot and I learned a lot from you. Vladi, I had the opportunity to share more time with you and Marija, than the time we spent in the lab.
During these great 4 years, there have been many people that I’ve met and all of you deserve my thanks too. Starting with the conversations on the balcony (such great view, and lots of wind), when Max managed to make Piluka talk in English and not in Spanish. Fabri, you were also my officemate, my hood neighbour and later my flatmate, thanks for your friendship. The Sardinian trip was awesome. Guillaume, you were always kind to help me and I learned a lot from you (I also learned from you that I love cats and I wanted to have one 😊). Tendai, my other Diemen buddy, I enjoyed your sense of humour and never ending stories. I really miss your entertaining conversation, I hope you have a very good life Zimbabwe, where there is sun and, I am sure, good weather. Leszek, your geeky knowledge was always helpful, but also nice to have you around in party time. Rosalba, I whish you the best, I am sure with your dedication you will get it. In my first office: Tehila (always helping me with dutch culture/language), Samir, Dennis (always in for the borrel and BBQs), and Gennady, thanks for making a quiet but enjoyable office. In the old building coffee corner, Johanneke, Erika, Jeroen, Tehila, all of you speaking dutch (this language that at that time sounded scary, now just impossible 😊) but always happy to share lunch time with everybody. The people in the 9.16 lab, Pierre-Alain, Quinten, Chrétien, Alessandra. The 7th floor people (btw, for about a month I had no clue where was that mysterious lab) Jurjen, Fred P, Ronald, Sumesh. Annemarie, the happy singer, I really thank you for all. Since the very beginning you were always so active and interested to help us adapting to your country (you even introduce us to the marvellous town of Almere!). I appreciate your friendship a lot, and I am definitely glad I had the opportunity to share the office with you (at least for a short period of time), it is nice to have you around. Coming to the new building, my new office mates Nicole (thanks for all the polymer cheerful conversations), Bart (I really like your accent in Spanish, always nice to talk to you), Rick, Avi, Esther S.; Sandra, you were also in my lab and I had the pleasure to share some music and interesting conversations with you, I guess you are a good example of mixture between fun and discipline (I never managed to pair them). In my latest office, Nanda, Eleonora, Shin, Massimo (young) thanks for the conversations.

In the lab 1.34, many fun moments, like when the girls (Sandra, Sara M., Sara A. and Carien) decided to terrorise me with the Dutch Disney movies music day! Perhaps it was my bill for always playing my music, which might not be on the taste of everybody. Carien, it was a pleasure to be you hood neighbour, I got to know a really nice person and I love your capacity of getting amazed for the good and simple things in life. Matthias, the funny German, your
crazy remarks were always interesting, which definitely made it much more enjoyable to work in the lab. Zhou, Martin, Vincent, Linda, thanks for your will to have a better lab.

Vova, you were also in my lab, but I guess when I really got to know you, was during our collaborations. I guess you are a very good chemist and a very good colleague, thanks for all the discussions and hard work that contributed a lot to this thesis. Of course, I have to thank my students. All three of you had your very distinct ways, but made learn a lot. I know I am not the smiling person but I do appreciate our collaborations. Olivia, you were so enthusiastic even though your focus was not entirely on the lab work. I hope you learned something from this time and continue having success in your career, either as athlete or as a chemist. Sara, no fue nuestro mejor momento para trabajar juntas, pero creo que eso es lo que mas me ha enseñado como guiar a alguien. Dicen que de los errores se aprende y yo aprendí mucho contigo. Espero que te vaya muy bien en la vida y creo que no te tengo que desear buena suerte, porque se que tendrás éxito, tienes muchas cualidades y sabes como luchar por lo que quieres. Esther, I think you’ve learned a lot as a chemist, but also as a person. I hope you also learned something from me. Dealing with two supervisors is not the easiest thing to do, but you managed to get through it on time and with good results, that says a lot about your value as a person.

The newer homkat generations, Pierre, Sander O., Stefan, Rene, Ricardo, Fenna, Danny, Andrei, Paul, Monalisa (I wish you would’ve joined the group before), Ping, .

I want to thank also to our team of technicians that were always there for me: Erik, Taasje, Fatna, Lidy; always so helpful with the lab issues and my own experimental issues. The NMR department that is almost part of our own group. Thanks to Jan Geenevaassen for the infinite talks about Dutch integration while helping me with the NMR’s. Jan Meine, thanks for helping also when I needed it and showing how easy was to solve my problems with the equipment. Incat, I did not work directly with you guys, but we still shared great moments. Zohar, you are a unique person that always has something to say. Remko, also nice to talk to you (and special thanks for all that mornings that you opened the door).

 Também quero agradecer a minha família e amigos, a los que de una u otra forma contribuyeron durante mi PhD. Gracias a mis padres, porque desde siempre lucharon para que yo pudiera llegar hasta aquí. Con cariño, y un poco de disciplina, lograron que yo empezará y terminará mi doctorado; simplemente no tengo palabras para agradecerles todo lo que han hecho por mi. Mis hermanos, quienes me han apoyado incondicionalmente con una palabra de aliento o una llamada, han logrado sostenerme para que no extrañe México y que la vida en Holanda se hiciera cada día más cotidiana. Mis amigos, quienes han sobrevivido a mis periodos de
olvido, pero que cuando los necesito están ahí para escucharme y compartir, aunque solo sea por mensajes o por teléfono.

Imelda en Hans, bedank voor de fijne tijd samen. Jullie zorgen goed voor me, en maken dat ik me welkom voel in Nederland. Dit heeft veel geholpen tijdens mijn promotie.

Finally, I have to thank to who has become my light every day. I love you and I know you have been the fundamental piece for me to accomplish my PhD. Ik hou van jou and hartelijk bedankt for alles Ivje.

Alma I.
Leiden, April 25th.
