Advances in endoscopic resection and radiofrequency ablation of early esophageal neoplasia
van Vilsteren, F.G.I.

Citation for published version (APA):
van Vilsteren, F. G. I. (2013). Advances in endoscopic resection and radiofrequency ablation of early esophageal neoplasia
Introduction and outline

PART ONE: ENDOSCOPIC RESECTION

Chapter 1 Learning endoscopic resection of esophageal neoplasia is associated with significant complications even in a structured training program. Endoscopy. 2012 Jan;44(1):4-12.

Chapter 2 Do’s and don’t of endoscopic resection: lessons learned from a structured training program.

PART TWO: RADIOFREQUENCY ABLATION

Chapter 8 Simplifying radiofrequency ablation of Barrett’s esophagus containing dysplasia: a randomized multicenter trial comparing three treatment regimens for circumferential ablation. Clin Gastroenterol Hepatol. Accepted, Dec 2012.

Chapter 9 A simplified regimen for focal radiofrequency ablation of Barrett’s mucosa using the HALO90 system: a randomized multicenter trial comparing the two ablation regimens. Gastrointest Endosc. Accepted, Feb 2013.
Chapter 10  A prospective multicenter study to identify predictive markers for initial treatment response after circumferential radiofrequency ablation for Barrett’s esophagus with early neoplasia. Endoscopy. Accepted, Jan 2013.

PART THREE: SINGLE SESSION RFA AND ER

Chapter 11  Safety of simultaneous use of endoscopic resection and radiofrequency ablation in an esophageal porcine model. Submitted.
