Acknowledgements

Many people have played encouraging and supportive roles during the years in which this thesis was written, and I would like to thank them all. I am extremely grateful to my thesis supervisors, Stuart Blume and Nelly Oudshoorn. I thank Stuart Blume for his genuine interest in my work, and for his stimulating vision of user-technology relations. Being supervised by Nelly Oudshoorn has been an enormous privilege. I have learned a great deal from her sharp analytical insight, her expertise in the field of reproductive technology, and her contagious enthusiasm about research. I am sure that we will stay in touch.

I wish to thank all of my colleagues at the Institute for Science and Technology Studies for providing a pleasant working environment. Silvia Manuputhy, Paulette Röring, and Thea Valkenhoef have provided valuable technical support and sympathy. I thank Frank Wamelink and Leen Dresen for being pleasant office-mates. I am grateful to the members of the Medical Group who helped me to clarify and rethink many aspects of this project. I especially thank Olga Amsterdamska for her rigorous scholarship, her thoughtful comments in all stages of my work, and for her wit. I have had great fun with Anne Beaulieu, my travelling-companion along the long and winding road of writing a dissertation.

This research would not have been possible without the generous collaboration of some of the main actors involved in the development of anti-fertility vaccines. I would like to thank James Catterall, Jane Cottingham, David Griffin, Anita Hardon, Gary Hunnicutt, Preeti Kirbat, Patrick Rowe, Faye Schrater, Beatrijs Stemerding, Vernon Stevens, Kalyan Sundaram, and Pran Talwar for granting me interviews. Vernon Stevens and David Griffin were so kind as to comment extensively on draft chapters. I owe very special thanks to Faye Schrater, whose professional candidness and heartwarming hospitality have been extremely valuable to me.

I am grateful for the travel grants that I received from NWO, WTMC, EASST, and the Center for Bioethics in Philadelphia. Thanks go also to Gene Moore for his editing of the manuscript.
Participating in the Advisory Board of the Women’s Health Action Foundation was an important way to supplement my academic work with an awareness of the need for action in the field of women’s health worldwide. Thanks to the members of the former Advisory Board for their inspiring company and insight: Jannemieke Hanhart, Jyotsna Gupta, Gunilla Kleiverda, Barbara Mintzes, Floor Rikken, and Prisca Zwanikken. I especially thank Annemarie Jurg for attentively sending me the latest news on anti-fertility vaccines. The Women’s Health Action Foundation and the Women’s Global Network for Reproductive Rights granted me access to their archives, for which I am deeply grateful.

One of the very nicest phenomena in the subfield of Gender Studies is the tendency of its scholars to share their thoughts and experiences in networks. I thank all the members of the Network for Gender Studies, Biology and Medicine: Diane Alewijnse, Christien Brouwer, Marta Kirejczyk, Ineke Klinge, Carla Koomen, Nelly Oudshoorn, Irma van der Ploeg, and Lidy Schoon. It was marvelous to learn from you, and to have a platform to try out my unfinished ideas. The Gender and Methodology Network met my need for such an environment in the final year. The Reading Group on Gender and Technology of the Belle van Zuylen Institute provided intellectual support as well. Ruth Oldenziel and her thought-provoking course on "Gender and Technology in Daily Use" have played a larger role than she might imagine in getting me firmly on the track of users and technology.

I wish also to thank the colleagues and friends that I have come to know through the courses of WTMC and at international conferences and workshops for their critical reflections and for being supportive readers. I am thankful to Adele Clarke, Irma van der Ploeg, and Ann Saetnan for making me feel a part of the sparkling community of Science and Technology researchers in reproductive technology. Many other bright colleagues and friends have encouraged me and stimulated me with their comments. Of these I can only mention a few: John Abraham, Adrienne van den Bogaard, Ruth Bensschop, Ken Green, Anita Hardon, Preeti Kirbat, Marta Kirejczyk, Rudi Künzel, Amade M’Charek, Peter Mollinga, Jenny Reardon, Arie Rip, and Jane Summerton.

Thanks to my father, Ab van Kammen, for his trust in me and for good discussions, and to my mother, Anne Ruth Wertheim, for her persistent interest in my work, her insight, and for the invaluable support that she provides. And, finally, to my beautiful daughters, Mayte and Lucien, and to Gabriel Sanchez Cano, por supuesto.

Amsterdam, 2-2-2000.
