ACKNOWLEDGEMENTS

I remember those who provided early guidance in my education when I had no idea what/whom I was going to become. I recall my teachers in primary school particularly Mr. Okakwu and Mrs. Eagan. Messrs Segun Aderinokun for kindling my interest in Integrated Science and later Biology; Tony Laleye for making sure I learnt to speak and write hopefully what is now passable English, Henry Owa for opening up the world to us in Geography lessons. I have fond memories of Professors Akinyemi Araoye, Gbenga Mokuolu, Ayo Soladoye and Bode Bojuwoye from my undergraduate medical training. The late Dr. Duze; Drs. Opadijo, Abdulrahman, Olaoye and Adesina also made their mark in my development. My teachers during my residency in Paediatrics-Professors Iroha, Akinsulie, Temiye, Grange and others who taught me; and endured numerous discussions and exchanges with me that I drew inspiration from. I have enjoyed and appreciated the friendship and sustained interest of Prof. Christy Okoromah in me and my development.

I have been blessed in finding mentors everywhere I have been; Professor Afolabi Lesi at Lagos University Teaching Hospital, and here at the MRC- Philip Hill, Martin Ota and Richard Adegbola who showed interest in moulding me, contributing and participating in my development. Their words of encouragement, support and willingness to engage at all times have been instrumental to my development. They inspired me with excellent examples of how to be a successful clinician/consultant, scientist, manager and man. I appreciate Dr. Ota for going beyond just being my manager, senior colleague and mentor to becoming my “big brother” and confidant.

I acknowledge the MRC unit director, Prof. Tumani Corrah who took me under his wing from the time I arrived here and continues to support me with advice, admonition and encouragement in his official and personal capacities. Prof. Umberto d’Allesandro on his arrival lent his voice and support in the final push to make sure I complete this thesis. In addition, Prof. Brabin who has a long-standing commitment to help budding scientists by providing opportunities for PhDs, gently continued to remind me to meet what I inadvertently turned into flexible deadlines for completion and submission of this thesis.

This body of work would have been impossible to execute without my TB clinic and field team who worked so hard to help me recruit and follow-up study participants- Monica Davies, Babou Faye, Abdoulie Tunkara, Kairaba Kanyi, Bajen Drammeh, Alhagie Bah, Omar Ceesay, Rohey Jallow, Massané Ceesay, Pa Camara, Mustapha Bah, Kutubo Secka, and Nyamina Kanyi.

The TB Immunology laboratory team was indispensable in setting up and running assays, and teaching me how to do them properly during my adventures in the laboratory. Many thanks go to Roger Brookes, Martin Ota, Moses Lugos, Abdulrahman Hammond, Patrick Owiafe, Joseph Mendy, Jabou Bah and Marie Gomez for seeing us all through thousands of IGRA experiments.
There would have been no starting point if TB patients were not diagnosed. The TB diagnostics laboratory played very important roles in these studies. To Jacob Otu, Francis Mendy, Andrew Rives, Oumie Secka, Neneh Sallah, Abigail Ayorinde, Bouke de Jong and Martin Antonio, I offer immense thanks.

Dembo Kanteh as Bacterial Diseases Programme Administrator, later external grants administrator and head, MRC Research Support Office provided friendship and logistical support. So have all others in the MRC support services and I mention a few here- Cherno Fye, Seidina Joof, Musa Sawaneh, Ebrima Cambi, Fanta Singhateh, Katty Ceesay-Sallah, Ya Fatou Touray, Arthur Roberts, Ebrima Njie, Ansumana Darboe, Kalilu Dibba and lots more.

The statistics team particularly David Jeffries, with Brigitte Walther briefly supporting provided guidance and plenty of support in design and analysis of project work. David’s wizardry in statistical analyses and the quality of the outputs continues to amaze.

For the data entry team-Kabiru Darboe, Sarjo Sanneh and colleagues, I give thanks. Simon Donkor as data manager has been an immense asset not just to me but the entire TB research family at the MRC. Since my arrival, this remarkable man has continued to manage varied streams of data flowing in from the field, laboratories and clinics always with a smile and affirmative answer to every request. Simon, many thanks for your support, for providing innumerable datasets even when sometimes the original queries were flawed and your contributions to the success of the projects reported here.

I have enjoyed as part of the TB research family, a productive collaborative relationship with the National Leprosy and TB Programme led by Mr. Adama Jallow supported by his colleagues-Kejaw Saidykhan, Musa Jallow, Anna Able-Thomas and others. I also thank all study participants and their families for their willingness to participate, their contribution of time and their commitment to see things through. Without them, there would be no thesis.

To my colleagues and friends here and back home, Martin Antonio, Martin Ota, Davis Nwakanma, Rasaq Oloasebikan, Ayesha Akinkugbe, Uzo Egere, Uduak Okomo, Chima Ofoegbu, Dapo Adeoye, Charles Oniha, and the Nigerian community at the MRC; I thank you for our numerous exchanges, friendship and support that helped my family and I feel at home away from home. Dele and Dayo Jones and family, your friendship has meant a lot. Thanks to Toyin Togun and Muyiwa Owolabi for covering the TB clinic when I had to be away. I thank colleagues-Lut Lynen, Moses Bateganya, Sara Van Rompaey, Maria Zolfo, Francoise Lequarre and others at the Institute of Tropical Medicine, Antwerp for continued collaboration and exchanges that have contributed to my development especially as a teacher.

Staff of the South African Cochrane Centre-Nandi Siegfried, Joy Oliver, and University of California in San Francisco- Tara Horvath helped me gain additional knowledge and competence in assessing quality of scientific evidence. For Nandi’s mentorship on my first review and the Cochrane Reviews for Africa Programme fellowship, I am thankful.
Thanks to my mother, Grace Olanike Adetifa, a very strong woman who set an example of hard work, dedication and had unwavering faith and belief in God and her children. As a result, I grew up believing I could become whatever I wanted and be successful at it. My father, Prof. Olajire Adetifa, introduced me into the world of academics. By his example, I learned of the commitment and dedication required for successful scholarship. My brothers (Bamidele, Opeyemi and Olalekan) who continuously expect me to show good example provided some of the drive for what I have been able to achieve.

Finally, I owe an immense debt of gratitude to my very dear wife, Jane who allowed me to relocate our family to The Gambia and has made our home there. Putting her career on hold, she and our wonderful children, Oluwaseyitan, Oluwatobiloba and Oluwatoni have endured and coped with years of distraction and engagement with work and research projects when I could have spent those quality times with them at home. Through my time here and in carrying out the projects reported here, they have shown me much love, support and enduring patience. I owe you guys so much more than can be described in words.

God bless you all including those who have contributed to this work in one way or another, but are inadvertently omitted.

I am grateful to God for making all of these possible in the first place.
