ACKNOWLEDGEMENTS

I would here like to take the opportunity to thank all the people that contributed and helped with the work of this thesis and made my promotion period at the NIN memorable and fun period.

First and foremost I would like to thank my promoter Prof. Elly Hol and my supervisor Dr. Willem Kamphuis for giving me the opportunity to do my promotion work in the group and to study the fascinating glial cells. Elly, you have always taken your time for me and your door has always been open. I have learned a lot from you, not only about astrocytes, Alzheimer’s disease and the ubiquitin proteasome system, but also about management. You have provided me with many tools that will be of great use in my future science career. I would also like to thank you, Willem, for being my team member in many different projects during these years. You have also taught me a lot, especially with all your knowledge about gene expression analysis and immunohistochemistry.

My dear roommates throughout the years: Thank you!!!, for all the help and support you have given me and for the many nice discussions, but foremost for all the fun times we have had together, in as well as outside the office. I will for sure miss you all! You all have given each and every one of my days at the NIN a golden edge and made it an unforgettable period. Jinte and Simone, you took care of me when I started as a new and green PhD Student and helped me with all sorts of things in the beginning. Regina, “Klopperi”, etc. etc...(I don’t have space to put all your nicknames here, but in Sweden we say “a loved child got many names”), my dear colleague, friend and paranymph, for all the many very nice times we have had together both at work and outside work, on holidays, on conferences and museums. You have definitely made my PhD period more fun, and cultural. To Martina, “Cookie Hole”, my dear colleague, friend and paranymph, thanks for all the great fun we have had at work and outside work and for the occasional squash and wrestling sessions, special thanks to your sense of humor, accents and for your entertaining stories.
and your generosity. To Carlyn, “ReRe”, my dear colleague and friend, thanks for your great sense of fun and party, which have given me many sessions of fun, also for your lovely cooking and for all your help with proofing and editing and your great help and input on graphics and thanks for all the late coffees on the way home. Eloy, “Cuaddie”, for your scientific input, your endless honesty and for many fun borrel sessions, but also for your great and continuous support of my graphics, I’ll keep your business card(s) for the future!

A great thanks to all the other Astro members, Oscar “O-man”, Miriam, Jacqueline and Paula thank you for your help on different questions of mine throughout the years. Oscar, also thank you for highlighting my time in Holland with nice music. Paula, for introducing me to the world of rowing and de Parade in Amsterdam. Lieneke, thank you for all the hard work you have done, especially for your beautiful stainings.

Big thanks to all my very diligent and hardworking students through the years, Stephanie, Lana, Jitte and Anne, you have all contributed to this thesis with all your great work. Lana, you also became to a great friend, I enjoyed our endless isolation days a lot, and I am happy to have you as a friend and I miss having you living around the corner. I wish all of you all the best in your future careers and with your promotion work.

Thank you to all the people in the Verhagen and the Huizinga group, for helping me with different matters throughout my years. Also for all the nice times at the NIN borrel, PhD student retreats and other sessions of fun there have been. Special thanks to Elisabeth and Kevin for all the nice barbecues and parties you have thrown, but also a big thank you guys for giving us our sweet cat and companion, Kleine, who will continue to be our daily support in Sweden.

Thank you all the borrel people at the NIN, for all the fun Friday afternoons (and evenings…). You have all contributed to making every Friday more relaxing and fun, also great thanks to the Borrelguerrila and the Party Squad for their good work.
Marcus, not only for the borrel sessions, but also for the many nice conversations and discussion we have had, and of course thanks for helping me with editing and proofing.

Wilma, for all the editing an translation help I got from you. Thank you Marcia for being so helpful, happy and friendly. Thanks also to Ernita and Heidi for all your help and for your very positive cheerful way of being, a visit to you two always made me leave with a smile.

Thank you to Joop and Joris for always being very helpful with all microscopy related matters. Joop, you have also been lightening up many microscope sessions with your sense of humor and your jokes.

Thank you to Sabine and Eric, for all your input and help on proteasome related matters and proteasome probes. Huib, thanks for providing me with the activators and probes and for all your input on proteasome matters and also thanks to Karianne, for helping me out with the proteasome work in the beginning.

Thanks to Christopher Kirk and Elena Chan at ONYX Pharmaceuticals, thank you for all the work you have done with the proteasome activity assays and inhibitors, witch led to exiting results.

Thank you to the Netherlands Brain Bank(ers) and Inge for the human brain tissue and for your great work making it possible to use this unique material. Special thanks to Michiel for your help with logistic and Brain Bank matters.

Thanks to Koen for teaching me microarray analysis and to Anke for your help with array hybridizations. Great thanks to Berend and Toni at the AMC flow cytometry facilities for all your help with cell sorting. Also thanks to Robert Hoek for your help with flow cytometry setup and analysis.

At the last but not least I would like to thank my family. Tack min kära familj, mamma,
och Tomas för all den support jag har fått under min uppväxt som har gjort att jag alltid har trott på mig själv och det jag gör. Tack också för allt ni gjort för mig och för er förståelse för att jag har varit borta mycket. Utan all er support hade denna avhandling inte varit möjlig, jag är glad att vi äntligen kan rå om varandra mer nu!

My dear Jeroen, thank you for everything. I am so happy that we met during my time at the NIN and in Holland. I have so many things to thank you for. You have helped me a great deal with the scientific work, with many discussions, with your good insights and all your knowledge, especially about microglia and cell isolations. You have also been an endless support to me during this whole period, through hard times and good times. I could not have done this without you, so thank you!
