CONTENTS

I	SETTING THE STAGE	1
1	INTRODUCTION	3
1.1	Context	3
1.2	Overview	9
2	BACKGROUND	15
2.1	Multinomial Logit Model	15
2.2	Nested Logit Model	18
2.3	Econometrics versus Statistical Physics	20
II	MEAN FIELD ANALYSIS	23
3	SOCIO-DYNAMIC BINARY LOGIT: THEORY	25
3.1	Field Effects Model	26
3.2	Scalar Autonomous Equation	28
3.3	Stability Analysis	32
3.4	Conclusions and Reflections	32
4	SOCIO-DYNAMIC TRINARY LOGIT: THEORY	35
4.1	Planar Autonomous System	35
4.1.1	Previous Results Established by Brock and Durlauf	38
4.2	Stability Analysis	39
4.2.1	Elements of the Jacobian matrix	41
4.2.2	Case I: Suppose $\det J = 0$	41
4.2.3	Case II: Suppose $\text{tr } J = 0$ and $\det J > 0$	48
4.3	Gradient System	50
4.4	Bringing It All Together	53
4.4.1	Solution Trajectory	57
4.4.2	Bifurcation Diagram	57
4.5	Conclusions and Reflections	58
5	SOCIO-DYNAMIC TRINARY NESTED LOGIT: THEORY	61
5.1	Trinary Nested Logit Model with Social Interactions	62
5.1.1	Choice Probabilities	63
5.1.2	Two Parameter Planar Autonomous System	66
5.1.3	Special Case: $\beta = 0$ (Null Model with No Social Interactions)	70
5.2	Equilibrium Regimes in (β, μ_L) -Parameter Space	72
5.3	Gradient System	79
5.3.1	An Alternative System	80
5.3.2	Expression of the Gradient System	82

5.3.3	Understanding the Competing Terms	85
5.4	Equilibrium Regimes in (β, μ_L) -Parameter Space, Re-visited	88
5.4.1	Qualitative Behavior: $\mu_L \rightarrow \infty$	92
5.5	Bifurcations Types	95
5.6	Stability Analysis	99
5.6.1	Elements of the Jacobian matrix	101
5.6.2	An Example	105
5.6.3	Special Solution: $p_1 = p_2$	108
5.6.4	Stability Analysis: $p_1 = p_2$	119
5.6.5	Stability Analysis: $p_1 = p_2$, Continued	127
5.6.6	Special Case: $\beta = 0$, Re-visited	139
5.6.7	General Stability Analysis	141
5.7	Bringing It All Together	164
5.7.1	Analytical Bifurcation Curves	164
5.7.2	Solution Trajectories	164
5.7.3	General Bifurcation Diagrams	164
5.8	Conclusions and Recommendations for Further Research	164
III DECISION IN NETWORKS 175		
6	SOCIO-DYNAMIC BINARY LOGIT: APPLICATION	177
6.1	Multi-Agent Based Social Simulation	178
6.1.1	Initialization	179
6.1.2	Iteration	180
6.1.3	Benchmark Model	181
6.1.4	Road Map	184
6.2	Abstract Classes of Heterogeneous Local Information	187
6.2.1	Erdős-Rényi Networks	188
6.2.2	Watts-Strogatz Networks	190
6.2.3	Preliminary Conclusions	193
6.3	An Empirical Example	194
6.4	Some Issues in Estimation	204
6.5	Conclusions and Recommendations for Further Research	211
7	SOCIO-DYNAMIC TRINARY NESTED LOGIT: APPLICATION	215
7.1	Conceptualizing Social-Spatial Networks	217
7.2	Data Preparation	220
7.2.1	Overview of the Data	220
7.2.2	Considerations	226
7.2.3	Sample Preparation	228
7.2.4	The Choice Dimension, Availability of Alternatives and Exclusion of Records	232
7.3	Benchmark Model with Global Interactions	241

7.3.1	Transition Dynamics: Simulated Evolution of Choice Behavior over Time	244
7.4	Impact of Agent Heterogeneity on Emergent Outcomes	247
7.4.1	Field Variables for Residential District and Socioeconomic Group	247
7.4.2	Specification of Utility Functions	251
7.4.3	Transition Dynamics: Multinomial Logit Model with Empirically Defined Systematic Utility and Local Field Variable	255
7.4.4	Transition Dynamics: Nested Logit Model with Empirically Defined Systematic Utility and Local Field Variable	258
7.5	Initial Conditions and Network Size in Benchmark Models	260
7.5.1	Benchmark Models	261
7.5.2	Transition Dynamics: Effect of Initial Conditions	267
7.5.3	Transition Dynamics: Network Size Effects	267
7.5.4	Interim Conclusions	269
7.6	Sociogeographic Networks: Clusters and Overlapping Groups	269
7.6.1	Definition of Interaction Variables	269
7.6.2	Summary Network Statistics	272
7.6.3	Transition Dynamics: Residential Clusters and Overlapping Influence Groups	274
7.6.4	Transition Dynamics: Effect of Initial Conditions with Sociogeographic Networks	278
7.6.5	Interim Conclusions	283
7.7	Utility Parameters and Connectivity in Empirical Models	283
7.7.1	Definition of Interaction Variables	283
7.7.2	Specification of Utility Functions	285
7.7.3	Transition Dynamics: Effect of Empirically Defined Systematic Utility with Sociogeographic Networks	289
7.8	Conclusions and Recommendations for Further Research	291
IV	CHALLENGES	295
8	ECONOMETRIC CONSIDERATIONS	297
8.1	Baseline Model with No Inter-Agent Dependencies	297
8.2	Social-Spatial Interdependencies in Choice Models	301

8.2.1	Strategy 1: Field Effect for Reference Group	301
8.2.2	Strategy 2: Unobserved Group Heterogeneity ("Panel" Effect)	302
8.2.3	Strategy 3: Alternative-Specific Dummy Variable for Reference Group	303
8.2.4	Strategies 4 and 5: Random Field Effect and Panel Field Effect	303
8.2.5	Notation	303
8.3	Results and Discussion	304
8.4	Endogeneity	314
8.4.1	The BLP Approach	315
8.4.2	The Control Function Approach	316
8.4.3	Instrument Selection	318
8.5	Extensions	319
8.5.1	Conditional Autoregressive Lag	320
8.5.2	Simultaneous Autoregressive Lag	322
8.5.3	Simultaneous Autoregressive Error	324
8.5.4	Copula Approach	326
8.6	Conclusions and Recommendations for Further Research	328
9	OUTLOOK	331
9.1	Concepts in Policy Context	331
9.1.1	Multiplicity of Equilibria	331
9.1.2	Initial Conditions	332
9.1.3	Volatility and Stochastic Cycling	332
9.1.4	Spread of Influence via Overlapping Groups	332
9.1.5	Solution Regimes	333
9.1.6	Speed of Convergence	333
9.2	Diffusion in Scientific Literature	334
9.3	Future Research Goals	334
9.4	Big Picture	347
V	APPENDIX	349
A	SOCIO-DYNAMIC BINARY LOGIT: THEORY, REVISITED	351
A.1	Scalar Autonomous Equation	351
A.2	Stability Analysis	353
A.3	Potential Function	356
B	SOCIO-DYNAMIC BINARY LOGIT WITH CONSTANT BIAS: THEORY	359
B.1	Symmetry-Breaking Two Parameter Bifurcation	359
B.2	Stability Analysis	362
B.3	Potential Function	366
B.4	Bifurcation Cusp in (β, h) -Parameter Space	367

C	SOCIO-DYNAMIC TRINARY LOGIT WITH CONSTANT BIAS: THEORY	369
C.1	Two Parameter Planar Autonomous System	369
C.2	Equilibrium Regimes in (β, h) -Parameter Space	374
C.3	Stability Analysis	374
C.3.1	Elements of the Jacobian matrix	378
C.3.2	Special Solution: $p_1 = p_2$	379
C.3.3	Stability Analysis: $p_1 = p_2$	380
C.3.4	Stability Analysis: $p_1 = p_2$, Continued	385
C.3.5	General Stability Analysis	390
C.4	Gradient System	394
C.5	Bringing It All Together	404
C.5.1	Analytical Bifurcation Curves	404
C.5.2	Solution Trajectories	404
C.5.3	General Bifurcation Diagrams	404
D	SOME CHALLENGES IN MODELING RESIDENTIAL CHOICE	417
D.1	Dynamic Choice Modeling	417
D.2	Temporal Correlation, State Dependence and Hetero- geneity	418
D.3	Initial Conditions Problem	419
D.4	Sampling of Observations	420
D.5	Definition of the Choice Alternative	421
D.6	Aggregation of Elemental Alternatives	422
D.7	Spatial Correlation of Alternatives (Zones)	423
D.8	Sampling of Alternatives (Zones)	424
D.9	Correlation Between Decision Makers, State Depen- dence and Heterogeneity	426
D.10	Boundary Conditions Problem	428
D.11	Decision-Making within a Household	429
D.12	Activity-Based Modeling	430
D.13	Market Segmentation	432
D.14	Cohort Analysis	433
D.15	Exogenous Versus Endogenous Network	434
	BIBLIOGRAPHY	437
	SUMMARY	471
	SAMENVATTING	481
