ACKNOWLEDGEMENTS

Finally, writing the last few words of a major chapter in the story of my life. This thesis has been a long bumpy road that seemed, at times, endless. However, I was very lucky to have the best companions that made this journey a unique once in a lifetime experience.

Dear Martien, thanks for putting your faith in that guy who came from far east (I am talking about Nijmegen here). It was a great honor working under the supervision of a scientist of your caliber. I really admire the way you look at things and the way you tackle problems. I really enjoyed discussing things with you, whether it was about work or about the meaning of life, which I still do not understand by the way. Thank you for everything.

Dear Esther, thank you for being such a great co-promoter. Your pragmatism and energy were crucial for this thesis to see light. Your door has always been open for me when I was facing problems either at work or at my personal life. I learned a lot from you and for that I will always be most grateful.

Toni, not only were you the first person I have ever met to have the same birthday as mine, but also you were one the best people I have ever worked with. Without you and your cheerful smile this whole thing would have been impossible. Esther (Taanman) and Femke, thanks for teaching me a lot of techniques and for being so patient. I cannot imagine the group without you guys. Eddy, I have no idea how you could put up with all these whining PhD students. Thanks for listening, helping and being such a great pal.

Now to the post-docs. Darya, we embarked on our trip together. I will never forget the first time we met and our first trip to Alber Heijn. It was great having you as a colleague and as a friend. Yuri, your jokes made any meeting, not matter how intolerable it was, fun. Thanks for all the rides home neighbor. Ronald, roomy, the one who sees the full half of a glass even when it’s completely empty. Thanks for all the good times.

Now one door further down the hallway to the republic of office L3-108. This room has witnessed a lot and I was lucky enough to be the only guy among 5 girls, which meant a continuous supply of chocolate, cookies and other things. I will do this in chronological order: Astrid, it was very nice working with you. Madelon and Junda, it was very nice having you around. Dear Mati, it is amazing how you always managed to infect everybody by joy and happiness. Sonja, aka Barbie, thank you my dear friend for all good times and the most amazing parties. Christina, my weekend companion in the lab, I loved our late chit chats and it was fun organizing the PCDI retreat with you. Dearest Rebecca, I called you by several names throughout the years: Blondie, Ginger, Becky, Becks...but you will always be my favorite German. I still owe you the long-promised red high heels. Rosa, I enjoyed our vivid discussions that ranged from Greek mythology to politics. Fong thanks a lot for helping me out moving, twice, and good luck taking over the mess I left behind. Lisa, I really liked working with you, though it was for a short period.

There were also those who were temporarily citizens or frequent visitors of L3-108: Angelic, it was nice working with you. Jeanette, it was fun having you in our lab and I do hope that your visit was fruitful. My dear student Lauren, supervising you was an educational experience for both of us. Sorry for being a tough teacher sometimes. Julien, my French buddy, sorry for
mocking your pDCs and calling them p cells. I really appreciate their importance now to the same extent you appreciate mucosal DCs 😊.

I would also like to thank all the people in Cell Biology & Histology Department for all the help and support they provided and for such a pleasant working environment.

Now to my paronymps: Laura and Florie. Your friendship is the best thing that happened to me during my PhD. Laura, I do not think I will ever find a better coffee-break partner. Thanks for teaching me to appreciate different types of music, for the splendid parties and of course for all the Spanish tortillas you made me. Florie, the last year of my PhD would have been horrible without you. You have always been there for me. I am wondering if you will keep your promise about camels 😊.

I want also to thank my MMD family: Wieteke, Karlien, Mariam and Manoe for all the support over the years. It is great being back in Nijmegen where it all started.

Ghaith and Hussam, my high school buddies, you have been always more like brothers to me rather than friends. Thank you very much for your support and for having faith in me. Miss you guys. Anas (Kamleh), my teacher and partner in crime in our trips to Paris. Thank you man for everything and I am still waiting for that brilliant project that will get us all together one day.

All my other friends from back home: Ismael, Amr, Ahmad & Amjad (Taleb), Ayman, Firas, Anas (Hamidi), Muthanna, Jamal, Samer and Chams, thanks for your support.

Nothing of this would have been doable without the support of the Bakdash clan. Mayah, I have always considered you as a loving and caring mother rather than a sister. In a way you contributed to this thesis through your son Abdulrahman, who did a great job designing the cover of this book. Dr. Bakdash (Husam), you have set the bar too high for me bro. I have always looked up to you and having you as a brother has always motivated me to achieve more.

Mohammad, my guardian angel and confidant, you have always been there for me whenever I had problems or went through tough times. All my nephews and nieces: Abdullah, Rewa, Obadah, Talah, Leen, Zayd and little Yazan, I love you all.

Finally, mama and baba, if it weren’t for you, I would not be writing these words today. Without knowing, you provided me with the essential tools to become a researcher. Mom, you taught me to have a strong passion for knowledge and to keep an open mind for new ideas. Dad, your dedication and continuous pursuit of perfection in everything you did has taught me a lot. I am blessed to have parents like you. Love you.

Peace & out
Ghaith
