ACKNOWLEDGEMENTS

First of all, I would like to thank Marjolein van der Voort for her help and guidance during my PhD. Marjolein was my supervisor at Philips Research. She always believed in me, supported me and stood up for me, even when I was overseas. I could have never succeeded without her. Hartelijk bedankt Marjolein!

I would also like to thank Martin van der Mark who opened me the door to the field of diffuse optical imaging of breast cancer. It was always good to have Martin around, not only for his knowledge but also for his fun and optimism (and extensive network!). Besides, Martin gave me many interesting and useful insights on the Dutch culture.

I would like to thank my professor Ton van Leeuwen. I felt very comfortable with him from the first time we met. Even though we were not directly working together, he supported the choices I made during my PhD and tried to get the best out of me. Being supervised by Ton, I visited regularly his lab at the Academic Medical Center (AMC) in Amsterdam. There I met people I will never forget: Martin van Gemert, Rolf Bremmer, Martijn de Bruin and of course Roy de Kinkelder. Thank you Martin van Gemert for your critical views on my presentations and for your endless help when writing my first article. Thank you Martijn for standing next to me, you are such a good friend to me. Thank you Roy, I had such a great time with you; and without you I would have probably become insane.

I would like to thank Bruce Tromberg. I met him for the first time during a SPIE conference. He was the chairman of the session where I was giving my first talk in a conference. We met again 6 months later in a summerschool in Sweden. There, he invited me to do research in his lab while holding a beer in his hand! The year after, I had the great opportunity to spend 9 months in his lab at the Beckman Laser Institute, at the University of California Irvine. This experience changed my life. At the Beckman Laser Institute, I met great people: Ylenia Santoro, Amanda Durkin, Shigeto Ueda, Darren Roblyer, Hosain Haghani, Jing Liu, Albert Cerussi, Montana Compton, Rolf Saager, Lisa Malenfant and Carole Hayakawa. I am very thankful to Albert who helped me with my research. I am also deeply thankful to Montana who took (and still takes) great care of me. Thank you also to Ylenia, in addition of been a great co-worker, she became a very good friend of mine.

I would like to thank the people from my initial project at Philips Research Eindhoven: Leon Bakker, Rik Harbers, Michiel van Beek, and the 2 students I had the chance to supervise: Hans-Peter and Wenjing. At Philips, I collaborated with many people from
Acknowledgements

various research groups and Philips branches (Philips Research Eindhoven, Hamburg, Philips Healthcare Medisys Paris, Philips Healthcare Ultrasound R&D Bothell and Philips Applied Technology Eindhoven). I would like to thank them all for their help and in particular: Rami Nachabe, Bernhard Brendel, Tim Nielsen, Wim Verhaegh, Olivier Cuisenaire, Vijay Shamdasani, Ton de Laat, Arno Raas, Frank Mertens and Zoran Stankovic.

I would like to thank my friends who contributed indirectly to the thesis by keeping me socially sane: Amine Mounaim, Cleo Massin, Elodie Marveaux, Vincent Kowalkowski, Mathilde Pecher, Sami Mumtaz, Vincent Lanticq, Alix Porto, Aurélie Azzolina, Marlo Thomas, Kirsten Hollmann, Jessica Setoe and Milos Stakic.

The work presented in this thesis was supported by a European Commission Marie Curie; contract MEST-CT-2004-007832.
