Twelve Tips for Making the Best Use of Feedback

Renée M. van der Leeuw
Irene A. Slootweg

Medical Teacher 2013 May 35;5:348-51
Abstract

Background
Feedback is generally regarded as crucial for learning. We focus on feedback provided through instruments developed to inform self-assessment and support learners to improve performance. These instruments are commonly being used in medical education, but they are ineffective if the feedback is not well received and put into practice.

Methods
The authors formulated twelve tips to make the best use of feedback based on widely cited publications on feedback. To include recent developments and hands-on experiences in the field of medical education, the authors discussed the tips with their research team consisting of experts in the field of medical education and professional performance, to reach agreement on the most practical strategies.

Results
When utilizing feedback for performance improvement, medical students, interns, residents, clinical teachers and practicing physicians could make use of the twelve tips to put feedback into practice. The twelve tips provide strategies to reflect, interact, and respond to feedback one receives through (validated) feedback instruments.

Conclusions
Since the goal of those involved in medical education and patient care is to perform at the highest possible level, we offer twelve practical tips for making the best use of feedback in order to support learners of all levels.
Twelve tips

Introduction

Background
Professionals working in patient care are required to adapt or improve their performance to be able to provide excellent care. It is globally understood that in order to improve, you should know how you are doing and what can be done better. An international study concluded that learners of all levels (undergraduates, postgraduates and practicing physicians) perceived feedback as essential to knowing how one was doing and how to improve. The process of interpreting data about one’s own performance and comparing it to an explicit or implicit standard was defined as informed self-assessment. The power of self-assessment lies in two domains: 1) the integration of data to assess current performance and promote future learning and 2) the capacity for ongoing self-monitoring during practice. People are known to have difficulty to reliably self-assess their performance. For example, physicians’ self-assessment of their clinical performance differed from the measures of competence observed by others. Similar results were found for faculty’s teaching performance, which faculty themselves frequently underestimated or overestimated. To generate feedback and inform self-assessment of performance, multiple validated instruments are available to generate feedback. Even though feedback is widely used, its effect on performance was found to vary. In general, there seems to be an emphasis on how to provide effective feedback. However, even valid, reliable and effectively given feedback is useless when not well received and put into practice to improve performance. This journal recently published twelve tips to help clinical teachers to give feedback effectively. What is lacking are twelve tips to make the best use of feedback in order to support performance improvement.

Objectives
We provide twelve tips that will help medical students, interns, residents, clinical teachers and practicing physicians to make the best use of feedback from (validated) feedback instruments to inform self-assessment, to define goals and develop learning plans in order to realize performance at higher levels.

Tip 1

Become quiet and take your time

Feedback can promote learning if it is received mindfully. Time can help to separate emotions from ratio. Plan and take time to let emotions sink, like sand in muddy water needs time to sink to the bottom before you can see through clear water again. Sometimes a couple of minutes can be enough, but it can also take a night’s sleep or a few days. After time has passed, you will better be able to see clearly and establish the value of the feedback. This first ‘master-tip’ can be helpful throughout the whole process of making the best use of feedback.
Tip 2

Read the feedback attentively

Start by choosing a place that suits you best to read the feedback thoroughly, for example a quiet office or favourite work space at home. When you are reading, it is important to regard all feedback as something that matters. Postpone your judgment until you have carefully read all the information. Try to focus on both the numerical feedback as well as the narrative comments. Narrative comments have proven to be a rich and useful source of feedback. This ‘value-free’ reading could be helpful to gain an overview and provide insight in the content and relevance of the feedback received.

Tip 3

Place yourself in the position of the one who provided the feedback

Feedback is always given in a particular context. It is important to know and understand the context, because it can influence your perception of the feedback. If you place yourself in the position of the feedback giver(s), it is easier to think about the context information at play. The context information can help you broaden your own views to test the true relevance of the feedback.

Tip 4

Separate the content from the relationship

The content of the feedback and the relationship you have with the feedback giver(s) are separate things. Keep these two things apart from each other. Use your knowledge and reason to deliberate about the aim and value of the feedback for your practice or performance. Recognize and acknowledge the time and effort that was put into providing the feedback. You could view the feedback as an opportunity to learn, enabled by your feedback giver(s). Therefore, it is important to sincerely thank your feedback giver(s) and possibly feedback what it meant to you.

Tip 5

Balance between being self-confident and being humble

A high level of self-confidence facilitates clear analysis of the content. Starting from a self-confident position can be helpful to view the content of the feedback even when it evokes emotional feelings because of negative or unconstructive feedback. This allows you to accept or reject the content of the feedback based on professional grounds. Hold that confidence to address improvement and develop a personal development plan, as it will increase the chance of being successful in the attempt to become a better doctor or teacher.
But keep in mind that confidence can only exist with a humble attitude towards yourself and the people in your surroundings.

**Tip 6**

**Love learning**
To want to improve your performance is an inherent characteristic of professionals (Medical Professionalism Project 2002). Lifelong learning can run from commencing medical school to working as a physician and educator. The love to learn can facilitate lifelong learning, whereas a study on residents reported that those who do not continue to learn become dissatisfied and get burned out.\(^{31}\) Lifelong learning can be defined as a (1) continuation of medical education with an (2) ongoing process of professional development along with (3) self-assessment that enables physicians to maintain the requisite knowledge, skills, and professional standards.\(^{32}\) Even physicians who perform at a high level need feedback to inform their self-assessment and direct learning. Reflection on feedback, defining goals and developing a learning plan can help to put feedback into action.\(^{24}\)

**Tip 7**

**Keep your professional goals in mind**
To support professional development you should keep your professional goals in mind. If you know what you want to develop professionally, you can determine the usefulness of the feedback to get closer to these goals. The process of interpreting feedback about one’s own performance and comparing it to an explicit or implicit standard is known as self-assessment.\(^{5}\) Self-assessment is considered to be the key step in the continuing professional development cycle.\(^{33}\)

**Tip 8**

**Keep the common goal in mind**
The feedback provider(s) and you often share a common goal. This could be ‘becoming the best possible doctor you can be’ (students and their teachers), ‘ensure safe and high quality patient care’ (residents and clinician teachers), or ‘improve teaching’ (teachers and their students or residents). With that goal in mind, you may be better able to overcome personal feelings of failure or uncertainty. This is an important step towards making use of the feedback to direct your learning.\(^{22,34}\)

**Tip 9**

**Take your study, residency training or job seriously**
When you are doing something that has value to you, you are more likely to seek feedback and act upon it. For professionals it means that learning is an issue of engaging in and
contributing to the practice of their community. Equally, for students it means training to become a doctor through their study, for residents growing professionally as doctors and as teachers and for physicians working as a doctor and teacher. Use your engagement as a starting point to keep a professional attitude towards feedback and the feedback giver(s).

**Tip 10**

**Talk about the feedback with the feedback giver(s)**

It is important to talk about feedback to check whether the message that was intended has come across, but it may take courage to discuss the feedback together with the feedback giver(s). If you have the opportunity to talk about the feedback, plan enough time and create the right conditions to exchange thoughts. Ask questions to deepen your understanding of the content and context of the feedback to self-regulate learning. This requires a non-defensive attitude. Posing questions in an open manner prevents refuting the message the feedback giver(s) might have.

**Tip 11**

**Start a dialogue with peers**

Courage is needed to organize peer evaluation of the content of the feedback. Use a method of dialogue and the help of an expert to organize a safe setting to discuss feedback with others. This increases the chances of learning from peers through sharing and testing the content of feedback to professional values and standards with your peer group. It helps to make the implicit standard explicit. Furthermore, it provides the opportunity to confirm feedback and enables you to discover how peers deal with feedback and learn from each other.

**Tip 12**

**Pick out the pearls**

Finally, you are the one who decides whether you can and will do something with the feedback. Moving through the tips above presumably will stimulate reflection which leads to a careful analysis of the content of the feedback. Pick out the pearls you want to respond to. If you accept the feedback, do it whole-heartedly and praise yourself for doing so. Reject the feedback that does not apply to you or is not helpful. Communicate about the unhelpful feedback with the feedback giver(s) acknowledging their efforts. If you choose to reject the feedback, keep looking for feedback in order to keep learning.

**Conclusion**

Everybody could potentially benefit from receiving feedback. However, feedback was not always found to be successful or beneficial to performance. We aimed to provide a practical solution to bridge the gap between receiving feedback and utilizing it in the best possible way.
We presented twelve tips that enable medical students, interns, residents, clinician teachers and practicing physicians to utilize feedback to their best interest in order to achieve better performance.
