You will be contacted as soon as possible.

## **Acknowledgements**

The research presented in this thesis was financed by the National Institute of Public Health and the Environment (RIVM). Fieldwork in Curacao and Aruba was financially supported by the Schure-Beijerinck-Popping Fund of the Dutch Royal Academy of Science (KNAW), Dr. Christine Buisman Fund, and Middelhoven Fund.

First I would like to express my gratitude towards the PhD committee: Prof. Dr. W. Admiraal, Prof. Dr. A.M. Breure, Dr. M.H.S. Kraak, Dr. C. Mulder, Prof. Dr. A.J. Boulton, Prof. Dr. A.M. de Roos, Dr. N.J. de Voogd, Prof. Dr. K. Kalbitz, Prof. Dr. S.B.J. Menken and Prof. Dr. P.F.M. Verdonschot, for their efforts and valuable comments in the grand finale of this project.

I thank Rob van Soest and Harm van der Geest (ever busy and non-responsive) for giving me the opportunity to pursue my own passion and curiosity during my masters, and for any subsequent assistance and fruitful discussions during my PhD project. You both have been/are very inspiring. Wim Admiraal. Thanks for all the illuminating discussions and for challenging me to go beyond. I can only hope that one day I will be able to understand everything you are saying. Michiel Kraak. You were faced with the daunting task to keep an untamable creature on track, and I am aware that you went to any length to do so. Thank you for being so enthusiastic and encouraging. Ton Breure and Christian Mulder. Thanks for the continuous support, assistance, patience and trust, and the inspiring discussions. This project was surely supported by an interesting blend of expertise, and I feel privileged that I was part of this.

My AEE colleagues. Helen (the sweetest woman on earth), Jaap, Bas, Mirjam and Marino. Thanks for being my 'wailing wall', for all assistance, and all the good fun ever since my arrival at AEE. Bram (my favorite bartender), Merrin, Ale, Raúl (a.k.a. Ron Jeremy), Sasha, Susanne: thanks for being such nice roommates and for all the good times. Jasper, thanks for organizing your desk in such a way that I always felt home. The latest additions to AEE: Arie, Ciska and Britt: Thanks for finding a route through my mess, and good luck with the remainder of your projects.

A diverse array of organisms contributed to this project, all of which died for the sake of science or, in most cases, due to improper care. Evidently, there is no space to address them all individually, but one species in particular was of pivotal importance to this project: *Saccharomyces cerevisiae*.

This thesis would also not have existed without the assistance of MSc students that participated in the project, including Bart de Vries, *Premature* Merrin, Annemarie Krieg, Marianne van Mierlo, Frederieke

Knopperts, Kristīne Doroško, Oscar Franken, Selma Ubels, Chris White, Maarten van Gemert, Daan Mes, but above all: Dré Kampfraath, who all had to face the challenge to master and contribute to science under loopy (if any) supervision. I thank you all for providing me more wisdom than I was able to give you.

Where you light a candle, you also cast a shadow. I thank Frank Hammecher and Peter van Tienderen for tolerating me at IBED despite a lengthy list of misdeeds. I thank family and friends, in particular Kenneth, Erwin, Coen and Louwrens for their continuous support and endurance of – even for my standards – disproportional silences. I thank my kids, Zev en Nubia, for being involved and inspiring, and ultimately the most supporting, tolerant and patient of all, my favorite: Girly Kelly.
