Acknowledgements

First of all, I want to thank my supervisor Astrid T. Groot for all her help and support during my diploma and PhD thesis. She was the reason I got interested in moths and she showed me how beautiful the world of sexual communication in insects can be. Besides fruitful and vivid discussions, she helped me to become a scientist, to find collaborators, and to deal with all kinds of trouble one experiences when working with insects and scientists. Thank you very much for all the effort you put into this project! I learned a lot from you as a great scientist and person and I'm looking forward to fruitful collaborations with you in the future. I'm also really grateful that I was allowed to work in the entomology department under the supervision of David G. Heckel who fully supported my ideas and my project, gave me the opportunity to present my work at international conferences, and shared a lot of his amazing knowledge with me. Thanks to my supervisor Steph B. J. Menken from the University of Amsterdam for all his helpful comments on my thesis and for supporting my defense in all possible ways.

Within our little *Spodoptera* group in Jena I want to especially thank my colleague and best friend Sabine Hänniger who was more than once the reason I came to work with a smile. Thank you for all the nice field trips we did together, for listening to and helping me with all of my scientific and private issues, and for calming me down whenever things went wrong. I'm really glad that I have you as a friend! Thanks to Gerhard Schöfl for providing me with insects when I started this project, for all productive discussions and for his remarkable statistical knowledge he shared with me. I want to thank Maria Laura Juárez who worked in our *Spodoptera* group for a short while and was so kind to conduct field work for me in Argentina. Thanks to Silvia Kost for all kinds of discussions, especially the ones about postzygotic isolation, for the good company during our retreat and for the fun with Edda.

This work would have not been possible without the help of different collaborators that either conducted or supported the field experiments in North and South America. Thanks to Robert L. Meagher and his technician Amy Rowley who helped me to find infested field sites in Florida and also conducted experiments for me in the sunshine state. Furthermore, I want to thank Gregg Nuessly and Tommy Toms for letting me perform trapping experiments at their experimental and agricultural field sites in South Florida. I want to thank David A. Jenkins for the nice collaboration in Puerto Rico, for all his support during the field work and for providing a lovely place to stay at his father's house. I also thank Wilson Rivera González from Monsanto and Jose Santiago from 3rd Millennium Genetics for giving me access to their experimental field sites in Santa Isabel in Puerto Rico. Special thanks to Gissella M. Vásquez who performed field work, genetic analysis and pheromone gland extractions in Peru. I want to thank Jeremy N. McNeil for performing field work for me in Canada and for being a member of my thesis committee, and thanks to Dominic Reising for conducting male trapping experiments in North Carolina. I also want to thank all of my collaborators for their helpful comments on our joined manuscript about geographic variation in *Spodoptera* males.

I want to thank Carlos Blanco for providing our lab with *Spodoptera* populations from Mississippi and for sharing his home with me when I visited Washington. Thanks to Manfred Ayasse and his group at the University of Ulm for letting me use their wind tunnel setup and for the warm welcome during our collaboration. Special thanks to Christer Löfstedt for his comments on my first manuscript and for being part of my thesis committee. I also want to thank Peter H. van Tienderen, Peter Roessingh and Joris M. Koene who are so kind to be members of my thesis committee.

Acknowledgements

I thank all members of the entomology department in Jena for the great working atmosphere and all helpful discussions during my time as a PhD student. Many thanks to my colleagues and friends Anne Karpinski, Andrea Barthel, David Neunemann and André Busch for the great company during the last years, and special thanks to Anne for her help with the AFLP analysis. I also want to thank our technicians Antje Schmaltz and Susanne Donnerhacke for all their support in the lab and for helping me with DNA extractions, strain identifications, and the AFLP analysis. Thanks to Regina Seibt for her support with the insect rearing and thanks to Domenica Schnabelrauch for providing a great sequencing service.

I want to thank all student helpers that took care of the *Spodoptera* rearing the last years and helped me in the molecular lab with DNA extractions and strain identification of thousands of moths. Special thanks to Kerstin Pohl, Doreen Jahn, Stephanie Ley, Anne Karpinski, David Neunemann, Camilla Kressner, Harald Zimmer, Rebecca Herold, Florian Bredy, Christine Pöllath, Raik Minkenberg, Jörgen Unbehend, Simone Sörtl, Sarah Behr, Susanne Neumann, Max Hemmerling and Katja Müller.

Besides scientific advice and help, this thesis was only possible because my friends supported me all the time and took care of me after working hours. Therefore, I want to thank my best “non-biologist” friend Franziska for the great company since I was six years old, the great conversations about everything, and for being my maid of honor. No matter what happens, I know we will be best friends forever. I want to thank my former flat mates Torsten and Björn for the awesome time we spend together during studies and for being good friends since then. Thanks to their families Corinna, Levi and Martha, as well as Franziska and Enna for all the great days we spent together and for their deep friendship.

Zum Schluss möchte ich mich noch bei meiner Familie bedanken, ohne die das Projekt Doktorarbeit gar nicht erst zustande gekommen wäre. Vielen Dank an meine Eltern für die finanzielle und moralische Unterstützung während meines Studiums und meiner Doktorarbeit. Danke, dass ihr für mich da seid und ich immer zu euch kommen kann wenn ich ein Problem habe. Vielen Dank an meine Schwiegereltern Peter und Doro, dass ich ein Teil ihrer Familie bin und sie mich auf meinem Weg immer unterstützt haben. Herzlichen Dank an meinen Mann Jörgen, der sich immer all meine Probleme anhört und mich unterstützt wo er nur kann. Vielen Dank, dass du Darwin in unsere Familie gebracht hast, der mich jeden Tag herzlich-freudig begrüßt wenn ich nach der Arbeit wieder nach Hause komme. Ich liebe dich und bin sehr froh, dass du dein Leben mit mir teilst.
