Dankwoord / Acknowledgements

The path that has brought me to this degree was definitely not straight and there are many people who guided me, helped me and supported me throughout my studies. Firstly, there was Phil Marriott. Phil, what a coincidence that you were familiar with the “UvA-clan” when I asked you 10 years ago whether you would recommend the Master’s program in Amsterdam! Many thanks for raising my interest in analytical chemistry and for taking me back for my master thesis a couple of years later. I had a great time in your lab and learned a lot! The next person along my path was Wim Kok. Wim, you were my first contact at the UvA and you straight away made me want to join the Master’s program by making everything easy and possible (I don’t know how many students apply with course lists from two different degrees from two different continents). In 2005, I joined Peter Schoenmakers’ group as part of my Master thesis. Peter, you immediately made me feel welcome and included me in everything going on in the group. That also meant having to go to Lunteren, the center of the world, which I actually enjoyed many times (how many times is too many, Wim?), but hey. Thank you also for supporting my wish to return to Melbourne and work on a joined Master thesis between the UvA and RMIT.

After finishing my master thesis and a quick stop in Switzerland Hans-Gerd gave me the opportunity to return to Amsterdam for this PhD project and a full-time job at Unilever. This decision was very easy as I was now able to combine the best of both worlds: studying while also gaining work experience. Thank you, Hans-Gerd, for your support and your patience, I hope you were not too worried that this project would never end during my maternity leaves… but it is very special that you were able to look past my personal life and still seeing the researcher I hopefully am today. Thank you also for guiding me to where I am today and for helping me not getting lost in details but seeing the bigger picture. Gabriel, you...
were always somehow involved in my master and in my PhD project and I am very grateful for that. Without you I would never have found out that data analysis is actually my passion within analytical chemistry. Thank you for your patience when teaching me Matlab-programming. It must not always have been easy for you! Thank you also for guiding and helping me throughout the last 8 years (!). Thank you also to the rest of the committee, for taking the time to read my thesis and discuss it with me.

At this point, it is time to thank the two groups I have been part of: at the UvA and at Unilever. Firstly, the UvA-clan – past and present. During my time in the “Polymer-analysis group / Analytical Chemistry”- group I have seen many AIO’s come and go, but we always had fun and sometimes even good and fruitful scientific discussions. Petra, you are a “constant”, thanks for being who you are and especially during the last years I loved being able to share my excitement for my growing family with you.

To everybody I worked with at Unilever: Many thanks for your help in all ways possible. Special thanks to Ewoud, for repeatedly and patiently explaining chemometrical methods to me; to Doris, for introducing me to the world of metabolomics (Danke für dein Interesse und deine Hilfe in der ganzen Zeit!) and the entire former MetaClub (thank you for many good and sometimes long discussions and taking me deeper into the world of metabolomics); to Herrald, for answering all my sometimes stupid questions in the lab (I know lab work will never be my strongest point. But I am trying…); to Christian, for helping me with all kind of analytical questions; to Wilma and Boudewijn for being great roommates during my first years at Unilever and to all others who have helped and supported me throughout the last six years (and hopefully will continue to do so in the future).

Many thanks also to all other people I have worked with throughout the years: Fiona Fitzpatrick (thank you for a great time at Firmenich and in Switzerland), Niki Fens (ook gaan wij misschien niet meer samen werken, ik hoop dat onze
“playdates” gaan aanhouden), Ursula, Ed, Ric, Iwan, Pieter and Martin… and
many more. Sorry I cannot mention you all, but if you have worked with me, be
sure that I am grateful you have contributed in one way or another to this thesis.
Of course, beside all professional help I could not have finished this thesis without
the support of my family and friends. Mama und Papa, ohne eure Hilfe und
Unterstützung wäre ich nie so weit gekommen. Auch konntet ihr euch nicht immer
vorstellen, warum es mich so in die Ferne zog, habt ihr immer hinter mir
gestanden. Und mich meinen Weg gehen lassen, auch wenn er manchmal sehr
kurvig war. Katharina, du bist die erste, die weiss, wie schwierig dieser Weg sein
cann. Du bist die beste Freundin, die man sich wünschen kann und ich kann mir
mein Leben nicht ohne dich vorstellen. Aufgrund deines (und Erwins) leichtem
Druck ist diese Arbeit endlich zu einem Ende gekommen. And last but surely not
least: Erwin, jouw steun als echtgenoot, als vriend, als de vader van onze twee
jongens en als wetenschapelijke maat heeft mij door deze vijf jaren heen gedragen.
Zonder jou had ik dit niet gekund en had ik het meest belangrijke gemist: ons
leven samen, met onze kinderen.
