---

759 Talley 1981 transcribed the recipe from the first 1633 edition. The recipe text was checked against the 1654 edition.
760 The first line of this recipe designates special purpose: ‘to prime a canvas quickly in a manner that one may paint the same day that it is primed’.

761 The title of this recipe is ‘Wenn man Leinen anstreigen wil’, which probably translates as ‘if you want to paint on linen’. The very short recipe does not make clear whether the paint to be applied is oil paint. The context of the book, a workshop book with a wide variety of recipes, does allow for the possibility, but not the certainty, that the recipe was part of instructions for oil painting.

764 Only if a ‘resisting ground’ [as opposed to an absorbent ground] is wanted.

765 Before painting, the whiteness of the ground is reduced with a thin was of colour (yellow ochre and ivory black). Grace advises to change the tone of this wash according to the area of the painting. Because of the fact that this layer follows the design of the painting, it is considered to be part of the painting stage and not in the ground layer build-up. In the case of an oil-bound ground, this wash consists of oil paint thinned with ‘benzoline’ or turpentine. In the case of a distemper ground, it consists of tube oil colours thinned with benzoline, or a thin was of watercolour paint. Grace 1881: 88.

778 Summary of Hundertpfund 1847 or 1849.
779 Before painting, the whiteness of the ground is reduced with a thin was of colour (yellow ochre and ivory black). Grace advises to change the tone of this wash according to the area of the painting. Because of the fact that this layer follows the design of the painting, it is considered to be part of the painting stage and not in the ground layer build-up. In the case of an oil-bound ground, this wash consists of oil paint thinned with ‘benzoline’ or turpentine. In the case of a distemper ground, it consists of tube oil colours thinned with benzolime, or a thin wash of watercolour paint. Grace 1881: 88.
