The climate is changing, species are about to go extinct, and mountains of garbage are ever increasing. In order to preserve the earth and provide a good living standard for all its inhabitants, it is important for people to continue making environmentally friendly choices. This dissertation, however, shows that people do not always behave in a consistent manner when it comes to their environmentally friendly behaviors. It is investigated how individuals justify abstaining from environmental actions. Specifically, in Part I, it is shown that individuals’ environmental behaviors are affected by their own previous behaviors. For example, engaging in environmentally friendly behavior may, ironically, lead individuals to subsequently justify being environmentally unfriendly. Second, in Part II, it is demonstrated that actions of other individuals’ and external institutions may provide individuals with justifications for being environmentally unfriendly themselves. These findings have important implications when aiming to persuade people to behave in an environmentally friendly manner.

# Contents

Chapter 1: Dissertation Overview 7

*Part I: Internal Justification*

Chapter 2: Choosing to Donate Provides Justification 47
   Study 2.1: The dark side of donating

Chapter 3: Self-Identity and Justification 61
   Study 3.1: Environmental self-identity as a moderator
   Study 3.2: Replication of the moderation
   Study 3.3: Excluding an alternative explanation

*Part II: External Justification*

Chapter 4: Close Others Providing Justification 87
   Study 4.1: Close others’ environmental behavior providing justification
   Study 4.2: Close versus non-close others
   Study 4.3: Balancing the behaviors of close others

Chapter 5: Media Science Reports Providing Justification 103
   Study 5.1: Progress frame providing feelings of order
   Study 5.2: Order and environmentally unfriendly behavior
   Study 5.3: Environmental behavior providing feelings of personal control
   Study 5.4: Progress frames providing justification
