## Contents

1  Introduction .......................................................................................................................................................... 7
   1.1  Motivation .................................................................................................................................................. 7
   1.2  Terminology of computational modelling .......................................................................................... 10
      1.2.1  Model building ............................................................................................................................. 10
      1.2.2  Model use ....................................................................................................................................... 12
   1.3  Thesis aims .............................................................................................................................................. 14
   1.4  Thesis set-up ........................................................................................................................................... 15

2  Background ....................................................................................................................................................... 17
   2.1  Introduction ............................................................................................................................................ 17
   2.2  Hydrodynamics: flow around a static gate ......................................................................................... 17
      2.2.1  General description ......................................................................................................................... 17
      2.2.2  Turbulence ....................................................................................................................................... 20
      2.2.3  Hydrodynamic forces on a static underflow gate ........................................................................ 21
      2.2.4  Navier-Stokes equations .............................................................................................................. 24
   2.3  Linear vibrations ....................................................................................................................................... 25
      2.3.1  Basic theory ...................................................................................................................................... 25
      2.3.2  Frequency domain .......................................................................................................................... 28
   2.4  Physics of flow-induced gate vibrations ............................................................................................... 29
      2.4.1  Introduction to flow-induced vibrations ..................................................................................... 29
      2.4.2  Dimensionless parameters ............................................................................................................. 30
      2.4.3  Causes of flow-induced gate vibrations ....................................................................................... 32
      2.4.4  Added coefficients ........................................................................................................................... 36
      2.4.5  Consequences of gate vibrations .............................................................................................. 38
      2.4.6  Myths about gate vibrations ......................................................................................................... 39
   2.5  Generalisation and problem solving in practice ................................................................................... 40
   2.6  Conclusions from the physical description ......................................................................................... 42

3  Physics-based numerical modelling .................................................................................................................. 45
   3.1  Introduction ............................................................................................................................................. 45
   3.2  Applying CFD for problem solving in hydraulic engineering ............................................................ 45
   3.3  Setting up a FIV model ............................................................................................................................ 49
      3.3.1  Finite element method .................................................................................................................... 49
      3.3.2  Turbulence modelling ..................................................................................................................... 49
