Modelling flow-induced vibrations of gates in hydraulic structures

Erdbrink, C.D.

Citation for published version (APA):
3.3.3  The arbitrary Lagrangian-Eulerian mesh

4  Multi-scale model for discharge control and flow impact
   4.1  Introduction
   4.2  Approach and method
      4.2.1  General
      4.2.2  Configurations of multi-gated structure
      4.2.3  System model and gate control
      4.2.4  Discharge model
   4.3  CFD simulations
      4.3.1  Model set-up
      4.3.2  Analysis of simulation output: flow impact
   4.4  Model validation
   4.5  Results of test case simulations
      4.5.1  Results of system and discharge model
      4.5.2  Results of CFD simulations
      4.5.3  Results of flow analysis
   4.6  Model coupling tests
   4.7  Conclusions of this chapter

5  Physical experiment
   5.1  Preface
   5.2  Introduction
   5.3  Experimental set-up
   5.4  Definitions
   5.5  Measurement conditions and variation of parameters
   5.6  Results of physical experiment
   5.7  Comparison with other experimental results
   5.8  Summary
   5.9  Photographs from the experiment

6  Numerical simulation study of gate vibration
   6.1  Introduction
   6.2  Model set-up
   6.3  Selected cases and model validation
      6.3.1  Added mass validation
