# Table of contents

## Chapter 1
**Introduction** .......................................................... 1  
1.1 Motivation and scientific challenges............................... 1  
1.2 Early Warning Systems for Flood Protection..................... 4  
1.3 Overview of the thesis.................................................. 6  

## Chapter 2
**Principles of dike modelling** ........................................ 7  
2.1 Simulation of water flow through the dike.......................... 8  
2.2 Modelling soil deformations............................................ 11  
2.3 Dike stability assessment............................................... 15  
2.4 Virtual Dike model........................................................ 17  
2.5 Conclusions................................................................. 20  

## Chapter 3
**Implementation, integration into decision support system and performance assessment** .................................................. 21  
3.1 Introduction..................................................................... 21  
3.2 Virtual Dike Implementation............................................ 22  
3.3 Integration into the UrbanFlood early warning system ........ 24  
3.4 Performance benchmarking............................................. 26  
3.5 Conclusions..................................................................... 29  

## Chapter 4
**Livedike case study: simulation and validation of the fluid sub-model** ................................................................. 30  
4.1 LiveDike: geometry, soil build-up, loadings and sensor data...... 31  
4.2 Governing equations, model data and computational mesh .... 36  
4.3 2D numerical sensitivity analysis of pressure amplitude and time delay to the variation of soil diffusivity ............... 39  
4.4 1D analytical sensitivity analysis of tidal pressure oscillations to the variation of soil diffusivity.................................. 41  
4.5 Automatic procedure for diffusivities calibration............... 45  
4.6 Livedike diffusivities calibration....................................... 47  
4.7 Conclusions..................................................................... 49  

## Chapter 5
**Boston dike case study: simulation and validation of a coupled flow-structure interaction model under tidal loads** .......................................................... 50  
5.1 Test site description and ground conditions......................... 50  
5.2 Instrumentation and sensor data analysis............................ 52  
5.3 Mathematical models and numerical implementation........ 55  
5.4 Finite element simulation results...................................... 58  
5.5 Limit equilibrium modelling results.................................... 60  
5.6 Models cross-validation: comparison of FEM and LEM results.. 61  
5.7 Conclusions..................................................................... 64  

## Chapter 6
**IJkDijk case study: prediction of a dike slope failure by the Virtual Dike module** .......................................................... 65
