Glow with the flow: Quantifying blood flow and photoluminescence signal in biological tissue

Nadort, A.

Citation for published version (APA):
Glow With The Flow.
A thesis that contributes to the development of optical techniques to assess microcirculation functionality for the diagnosis, monitoring, therapy guidance and understanding of many diseases ranging from the onset of septic shock to the delivery of drugs to tumours. The first part of this thesis aims to develop a non-invasive technique to quantify microcirculatory blood flow velocity based on laser speckle flowmetry. The second part is devoted to the quantification of optical signals arising from photoluminescent upconversion nanoparticles for sensitive detection in biomedical tissues. The combination of these techniques is particularly useful in the context of tumour therapy by providing information on tumour angiogenesis, enabling molecular contrast and delivering nanoparticle-based drugs.

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. D.C. van den Boom
ten overstaan van een door het College voor Promoties ingestelde
commissie, in het openbaar te verdedigen in de Agnietenkapel
op woensdag 1 april 2015, te 14:00 uur

door

Annemarie Nadort

geboren te Zaanstad

Faculteit der Geneeskunde
# Table of Contents

Chapter 1  Introduction                                                                 7

Chapter 2  Laser speckle contrast imaging                                               25

Chapter 3  Quantitative laser speckle flowmetry of the *in vivo* microcirculation using sidestream dark field microscopy 37

Chapter 4  Quantitative blood flow velocity imaging using laser speckle flowmetry      57

Chapter 5  Upconversion nanoparticles                                                  91

Chapter 6  Quantitative imaging of single upconversion nanoparticles in biological tissue 103

Chapter 7  Feasibility study of the optical imaging of a breast cancer lesion labeled with upconversion nanoparticle biocomplexes 133

Chapter 8  Discussion and conclusion                                                    155

Chapter 9  Outlook                                                                      173

Appendices List of abbreviations                                                       181
List of symbols                                                                          182
Samenvatting van het proefschrift                                                        185
Thesis summary                                                                           191
List of publications                                                                     197
Portfolio                                                                                200
Curriculum vitae                                                                         203
Acknowledgments                                                                          205
