Glow With The Flow.
A thesis that contributes to the development of optical techniques to assess microcirculation functionality for the diagnosis, monitoring, therapy guidance and understanding of many diseases ranging from the onset of septic shock to the delivery of drugs to tumours. The first part of this thesis aims to develop a non-invasive technique to quantify microcirculatory blood flow velocity based on laser speckle flowmetry. The second part is devoted to the quantification of optical signals arising from photoluminescent upconversion nanoparticles for sensitive detection in biomedical tissues. The combination of these techniques is particularly useful in the context of tumour therapy by providing information on tumour angiogenesis, enabling molecular contrast and delivering nanoparticle-based drugs.
Glow with the flow: Quantifying blood flow and photoluminescence signal in biological tissue

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor aan de Universiteit van Amsterdam op gezag van de Rector Magnificus prof. dr. D.C. van den Boom
ten overstaan van een door het College voor Promoties ingestelde commissie, in het openbaar te verdedigen in de Agnietenkapel op woensdag 1 april 2015, te 14:00 uur

door

Annemarie Nadort

tegen te Zaanstad
PROMOTIECOMMISSIE

Promotores:  prof. dr. A.G.J.M. van Leeuwen
             prof. dr. M.C.G. Aalders
            Universiteit van Amsterdam
            Universiteit van Amsterdam

Co-promotor:  dr. ir. D.J. Faber
           Universiteit van Amsterdam

Overige leden:  prof. dr. E.T. van Bavel
               prof. dr. W.J. Buma
               prof. dr. H.I.C.M. Sterenborg
               prof. dr. ir. W. Steenbergen
               dr. E.G. Mik
            Universiteit van Amsterdam

Faculteit der Geneeskunde
# Table of Contents

Chapter 1  Introduction  7

Chapter 2  Laser speckle contrast imaging  25

Chapter 3  Quantitative laser speckle flowmetry of the *in vivo* microcirculation using sidestream dark field microscopy  37

Chapter 4  Quantitative blood flow velocity imaging using laser speckle flowmetry  57

Chapter 5  Upconversion nanoparticles  91

Chapter 6  Quantitative imaging of single upconversion nanoparticles in biological tissue  103

Chapter 7  Feasibility study of the optical imaging of a breast cancer lesion labeled with upconversion nanoparticle biocomplexes  133

Chapter 8  Discussion and conclusion  155

Chapter 9  Outlook  173
