Individual Lesser Black-backed Gulls used in this study (2008-2011). Shown are colour-ring code, GPS number, sex, wing length, head length, body mass (all measurements when captured from a complete clutch during tagging/ringing), active breeding period, period as failed breeder, breeding success (number of fledglings), and percentage (%) of time spent during long trips in the North Sea, the Wadden Sea, on the island Texel and on the continental Mainland. The number of recorded long-trips, short trips, and nest bouts for each individual is indicated separately.

Ring	GPS	Sex	Wing	Head	Mass	Year	Breeding		Failed	Breeding success	North Sea	Wadden Sea	Texel	Mainland	Long trips	Short trips	Nest Bouts
