CHAPTER THREE

The Emergence and Development of Ethnic Strongholds and Frontiers of Collective Violence in Jos, Nigeria*

Abstract
Contestations over indigene rights and political representation resulted in Christian-Muslim riots in the Nigerian city of Jos. Between 2001 and 2010, over 5,000 people were killed. This article complements existing literature on the spatial dimension of violence by focusing on how Jos’ neighborhoods transformed from everyday residential areas to spaces of ethnic differentiation and violence. The article draws from an ethnographic study to map the violence’s emergence and development in Angwan Rogo and Nasarawa Gwong. These neighborhoods represent, respectively, ethnic strongholds and frontiers, two kinds of socio-spatial settings conceptualized to help explain violence’s spread and patterns.

Keywords: ethnic conflict, urban conflict, neighborhood, city, Plateau State, Riots, Nigeria

* This chapter is based on an article that is currently under review.
Introduction

Jos sits on the edge of a tableland spread over 5,343 square miles at an average elevation of 4,000 feet above sea. The semi-temperate climate, scenic hilly ranges, and strategic location, in the center of Nigeria, make it a terminus for settlers and a tourist destination. Established by British colonialists in 1915, the city grew around a tin mining industry that attracted labor migrants and merchants from across the country. A century later, Jos remains one of Nigeria’s most diverse cities. Its 800,000 inhabitants belong to over fifty ethnolinguistic groups. Though no official statistic is recorded, the population is generally believed to be equal halves Christian and Muslim.

Between the late 1960s and 1990s, as ethnic conflict and religious extremism ravaged neighboring urban centers, including Bauchi, Kaduna, Gombe, and Kano, Jos ranked among Nigeria’s most peaceful cities. Over the last fifteen years, however, it gained notoriety as one of the country’s most violent. Episodic Christian-Muslim clashes in the metropolis and the outlying settlements claimed over 5,000 lives between 2001 and 2010. Boko Haram bombings and revenge attacks followed, persisting until 2015. Experts have analyzed the structural factors that led to the Jos crises (see Danfulani & Fwatshak 2002; Egwu 2004; Best 2007; Higazi 2007; Ostien 2009), highlighting contestations over indigene rights, political representation, and city ownership. Beyond structural causations, Jos scholars have sought to explain the factors shaping the spatial distribution of violence in the different outbreaks (Krause 2011, 2017; Bunte & Vinson 2016; Madueke 2014, 2015). This interest follows research trends for other violent cities including Belfast (Cunningham 2013; Mesev et al. 2009), Jerusalem (Bhavnani et al. 2014), Beirut (Bou Akar 2012), and Osh (Kutmanaliev 2015), while considerable work in this vein has been devoted to Indian cities (see Varshney 2001; Brass 2004; Wilkinson 2006; Berenschot 2011).

---

27 Actual number of deaths is unknown but conservative estimates range between 4,000 and 7,000 (see Higazi 2011:18; Krause 2011:12); In my mind, a reasonable estimate for deaths caused by violence within Jos and environs between 2001 and 2010 is 5,000.
The case of Jos has contributed meaningfully to local and global discussions about the intersection between spatiality and collective violence. Krause’s (2017) paired comparison of violent and nonviolent neighborhoods in Jos demonstrated that civilian networks are a key determinant of neighborhood violence, more so than demographic and structural factors. She observed how the neighborhood Dadin Kowa stayed non-violent thanks to individuals and social networks intervening to prevent youth from engaging in violence. While Krause emphasized civilian agency’s role in violence prevention, Bunte and Vinson (2016) illustrated how the presence or absence of power-sharing determined violence and non-violence across Jos North and Chikun districts. In so doing, they forwarded a convincing account of how the politics of exclusion works to cause violence. Studies have long cited poverty as a structural factor underpinning ethnic violence in Africa (Elbadawi & Sambanis 2000; Collier & Sambanis 2005) but how poverty and violence interact has been more elusive (Sambanis 2001). Explaining why Jos’ poorer neighborhoods are more susceptible to violence than wealthier, Scacco (2012) noted how residents of the former were forced to defend themselves and their families because the government did not provide their areas adequate security.

These studies have advanced our understanding of the spatial dimension of violence in Jos, but there remains much unearthing to do. At a disaggregated level, we still seek to understand how neighborhoods, once locales of peaceful coexistence and congeniality, turned into arenas of atrocities. We also need a systematic examination of how different types of neighborhood settings shaped patterns of violence and how the violence reshaped them.

Taking up these tasks, this article selects the neighborhoods of Angwan Rogo and Nasarawa Gwong for its case study. The analysis offers three major contributions to the field. First, by examining what Jos neighborhoods underwent, the study highlights transformational milestones that can be applied to understanding conflict in other cities struggling with similar security challenges. This insight is crucial for formulating and implementing violence prevention and peace-building. Second, in conceptualizing ethnic strongholds and frontiers, the article provides tools to make sense of the interaction between violence and its spatial context. Profiling the two distinct settings and how they differentially
contribute to violent outcomes produces practical tips for how authorities can respond to conflict with greater context sensitivity. Third, understanding what changes occurred in the two neighborhoods affords a general idea of what happened in other neighborhoods and helps explain why the violence rapidly spread across the city.

Divided into four sections, this article begins by chronicling factors underlying group relations and violent conflict in Jos and discussing political developments at national, state, and municipal levels that shaped neighborhood-level group dynamics. The second section then describes the study’s methods and data. The third traces how the aforementioned factors hastened Angwan Rogo’s transformation into an ethnic stronghold and Nasarawa Gwong’s into a frontier, and defines these two socio-spatial settings. The fourth details the 2001 riots of Jos, noting how the stronghold and the frontier shaped patterns of violence and how the violence, in turn, completed the settings’ transformations.

The progression of ethnic conflict and the spatial dimension of violence

Intergroup and intragroup dynamics at the neighborhood level were swayed by the same factors shaping the evolution of group relations in Jos. Relevant milestone include the politicization of ethnic identities in Nigeria during the 1980s, the creation of Jos North LGA in 1991, the low-scale violence of 1994, the country’s return to democratic government, the embargo on indigene certificates for the Hausa in 1999, and the violence of 2001. An outline of the events suffices for this article, though expert analyses exist (see Higazi 2011; Krause 2011; Ostien 2009; Best 2007; Egwu 2004).

Although politicization of ethnic identities in Nigeria has its origin in colonial rule, post-colonial events expedited the process. One definitive turning point was the 1986 implementation of IMF and World Bank structural adjustment program (SAP) following a recession triggered by fall in oil revenue. Intended to restructure consumption and production and to reduce dependence on crude oil and consumer goods imports, the SAP turned out to be counterproductive, plunging Nigeria into a major economic crisis (Anyanwu 1992:5). High unemployment followed due to cuts in government expenditure. Scholars have stressed the SAP’s negative effects not
only on the economy, but also on group relations (Ihonvbere & Ekekwe 1988; Beckman 1991; Adetula 1992; Osaghae 1995; Nnoli 1998; Mustapha 2000; Egwu 2004). The overlap of SAPs and conflict proliferation elsewhere in Africa is well documented (Williams 2004; Sesay & Ukeje 2009). In the wake of the SAP-precipitated austerity, Nigerians became discontent and the military government’s last flicker of legitimacy was extinguished (Jega 2000:36).

To relieve their plight, Nigerians looked beyond the state. A foremost source of succor was tribal and kinship ties (Egwu 1998, 2004:156). Growing ethnic consciousness coincided with rising ethnic associations (Osaghae 1995; Jega 2000; Egwu 2004). “Not only was there an upsurge in the membership of these associations,” stated Osaghae (1995:46), but also “there was a rapid expansion in their number, variety and purpose.” The government was generally hostile to signs of dissent; trying to curry favor with citizens, it therefore deployed a system of patronage, seeking influential religious and tribal associations to redeem its legitimacy (Jega 2000:20). In 1987, during an “ethnicization of politics” or a “politicization of ethnicity” (Egwu 2004:32), the Jasawa Development Association (JDA) was born. Representing the Hausa population in Jos, this organization was a protagonist in the indigene-settler conflict that would ensue.

Meanwhile, several developments hastened transformation of Jos’ already politicizing residential areas into militarized ethnic strongholds and frontiers. The first was creation of Jos North LGA. Nigeria has 774 administrative units known as LGAs. Jos North LGA is the economic capital of Plateau State and was carved out of the old Jos LGA in 1991 amidst contestations between the indigenes and the Hausa. Experts have theorized how the new LGA intensified contestations over city ownership and added a territorial dimension to the issue (Best 2007; Ostien 2009; Higazi 2011; Krause 2011; Milligan 2013). In a climate of long-standing indigene resentment about the creation of Jos North, the city experienced its first wave of violent riots since the Igbo pogroms of 1966. Protests and counter-protests erupted after, in April 1994, Plateau State military governor Mohammed Mana appointed Aminu Mato, a Hausa, as chairman of the management committee of Jos North LGA.
Other events helped spur deterioration of relations. One was a return to democracy after military rule—1999’s electoral campaigns were particularly acrimonious. More consequential, though, was the newly elected chairman’s embargo on indigene certificates for the Hausa community (Ostien 2009). Issued by LGA authorities to differentiate between indigenes and migrants or settlers, the certificate lets individuals qualify for scholarships, school admissions, employment quotas, and tenured positions as heads of government ministries and agencies. The indigene certificate has been an infamous source of discrimination and conflict in Jos and elsewhere in Nigeria (Abdullahi & Saka 2007; Sayne 2012; Fourchard 2015; Ehrhardt 2017). Denying the Hausa indigene certificates directly contributed to the fracas culminating in large-scale violence two years later, though the last straw was the July 2001 appointment of a Hausa to serve as coordinator for a federal government poverty alleviation scheme for Jos North. His appointment resulted in acrimonious exchanges between indigenes and Hausa and that September, riots erupted.

**Research Methods and Data**

This study is based on fieldwork conducted in Jos between 2015 and 2017. Because, as Brass (2004:4839) stated, “quantitative, statistical analyses cannot demonstrate the existence of a dynamic process,” I pursued an ethnographic approach that could capture processes at a disaggregated level. Data sources include interviews, primary school common entrance registers, and election results, alongside informal discussions I held in neighborhoods, motor parks, and other public places. This ethnography marks the first time primary school registers were used to systematically approximate Jos neighborhoods’ ethnic composition and how it changed during the study period.

*Interviews and Discussions*

The article draws from forty-seven interviews. Respondents included local politicians, neighborhood leaders, representatives of ethnic associations (tribal and religious), youth leaders, taxi and bus drivers, eyewitnesses, survivors of violence,
and residents of the two neighborhoods as well as of the adjoining areas; eighteen interviews took place in Angwan Rogo, fifteen in Nasarawa Gwong, and fourteen in adjacent settlements. I sampled informants through an innovative search system that combined elements of snowballing and purposeful sampling. Since my primary goal was to examine the trajectory of transformation that goes back about a decade, length of residence and keen understanding of the dynamics of associational life, politics, and violence in the neighborhoods were crucial considerations in the sampling process. All the people interviewed experienced the violence of 2001 firsthand and many were either perpetrators or victims of violence.

The interviews focused on the various aforementioned events that took place between the 1990s and the early 2000s. Thematic analysis was used to distil interviews and archival material. For each event, responses to the four questions were coded into four categories. The first category sought to capture how negatively or positively groups experienced the event. The second noted positive or negative effects on intergroup relations, including whether the event had a polarizing effect or some other influence and any impact on intragroup dynamics (e.g. if groups become more cohesive). The third category detailed the event’s implications for social networks’ dynamics, form, operations, and activities; also considered were implications for social groups such as residents’ associations, vigilantes, and campaign teams. Finally, the fourth category documented the event’s effects on ethnic composition, particularly whether segregation levels in a neighborhood rose. For the discussion concerning 2001, violence patterns and levels in the neighborhood were noted (e.g. if violence took the form of pogroms, clashes, or sporadic isolated incidents). After organizing interview responses into coherent themes based on the negative or positive effect an event had on group relations, I ordered them chronologically and re-contextualized them into a coherent story. The interviews were analyzed in a manner that directly addresses this article’s central concern: to empirically demonstrate the changes neighborhoods underwent in the lead-up to large-scale violence. The approach seeks to reveal each event’s effect on intragroup and intergroup dynamics. Moreover, it aims to understand how group relations degenerated to the point that
residents who co-existed peacefully for many years rationalized picking up arms and attacking each other.

*Primary School Common Entrance Registers*
Because the Nigerian census does not include ethnic categories, I used public primary school composition as a proxy for the ethnic composition of the neighborhood in which the school is located. I took the graduating class as a representative sample of the school since these pupils all sit for the common entrance examination. I analyzed registers for the classes of 1990, 1995, 2000, and 2005, seeking any remarkable patterns in the buildup to the 2001 violence and afterwards. I began by categorizing the pupils as “Muslim” or “Christian;” in Jos and much of Nigeria, names are usually an accurate reflection of individuals’ religions.

*Election Results*
The 2015 general elections provided a general idea of variations in voting patterns in ethnic strongholds and frontiers. I used the 2015 presidential election since records for elections in 1999 and 2008 were either inaccessible or unavailable; LGA elections, moreover, were not held in Jos North after 1999 and until 2008.

The datasets had inevitable biases and limitations. An ethnic group might have been overrepresented or underrepresented in a school or a class by chance or for various other reasons. In interviews, respondents might have twisted events to suit their own narratives and memories of some occurrences, from several decades back, might have been fuzzy. And, as mentioned, most elections results proved inaccessible. To address these concerns, I conducted a robust “ground truthing” process that involved visits to the neighborhoods, close observation, and discussions with a cross-section of residents. Additionally, I assessed the veracity of seemingly outrageous claims by triangulating different sources of data.

*The Evolution of an Ethnic Stronghold*
To explain an ordinary residential area’s transformation into an ethnic stronghold, I begin with a description of this type of socio-spatial setting. At its basic level, a
stronghold is a segregated settlement where one ethnic group predominates and controls the prevailing way of life. A Muslim stronghold, for example, has a visible presence of mosques, Koranic schools, and other Islamic institutions, while Christian institutions are few or nonexistent. The ethnic stronghold may be surrounded by areas of similar ethnic composition, though at least part of its boundary is shared with an ethnically mixed area, which, in turn, shares a boundary with a stronghold that rivals the ethnic stronghold. The ethnic segregation in the stronghold masks other peculiarities, such as high level of ethnic solidarity that becomes manifested in collective behavior such as voting for the same political party or candidate (Olzak 1983:357).

The stronghold helps conceptualize how identities are constructed and reconstructed (Nagel 1994) within a spatialized emergent subculture. Olzak (1983:356) explains the type of solidarity in the stronghold as “the conscious identification with a given ethnic population” that “includes the maintenance of strong ethnic interaction networks and institutions that socialize new members and reinforce social ties.” Mobilizing co-ethnics for collective violence is more feasible in a stronghold setting (Fearon 2006), which breeds opportunity for cost-free intragroup communication (Weidmann 2009). Mobilizing residents into mobs is easier in the safety of segregated areas where “contentious claim making gains protection from routine surveillance and repression because of terrain, built environment” (Tilly 2000:144).

But segregation and solidarity are not the only elements. A stronghold is characterized by the presence of politicized and militarized social networks comprising local politicians, self-proclaimed ethnic activists, gangs, thugs, and ordinary residents. These actors play complementary roles, crucial for accomplishing collective goals, though they are also driven as individuals with personal objectives, such as securing money, jobs, and favors. Within the networks are social subsystems analogous to riots systems (Brass 2004) and patronage networks (Berenschot 2011) that fuel and sustain violence. They are characterized by “complex webs of exchange, obligation, and reciprocity… sustained over a long period of time” (Kitschelt & Wilkinson 2007:19). For local criminals, gaining local politicians’ patronage may motivate riots, though the chaos also provides
opportunities to loot and get away with crime. Looting has long been recognized as a key activity in the dynamics of ethnic riots (Mac Ginty 2004; Dynes & Quarantelli 1968).

These characteristics apply to the Muslim stronghold of Angwan Rogo, a poor neighborhood north of Jos’ city center. After the 2001 violence, the settlement’s population became homogenously Muslim (see table 3.1), with over 100 mosques and Koranic schools (a figure counting the many garages and verandas used for praying and teaching); the only two churches that once stood were both destroyed in the violence.

Angwan Rogo’s demographics mean that its civic structures and all social networks, both formal and informal, are comprised entirely of co-ethnics. Residents’ associations and vigilante groups are intra-ethnic—not a single network member is non-Muslim.28 Consequently, voting patterns reflect strong ethnic allegiance (see table 3.2). Political “black sheep” are discriminated against or harassed, as illustrated in the 2015 elections, when arsonists set fire to the house of PDP chieftain Adams Alkali, a resident of the APC-dominated29 Angwan Rogo.30

29 The All Nigeria Peoples Party (ANPP) merged with two other political parties in 2013 to form the Action People’s Congress (APC), which is heavily supported by Muslims in Jos and northern Nigeria. It won the 2015 general election against the ruling People’s Democratic Party (PDP).
The arsonists were part of the violent network that helps the neighborhood self-maintain as a stronghold.

Violent networks present more than a security challenge for the neighborhoods in which they are embedded. They also pose a major threat to adjoining neighborhoods, especially when ethnically mixed. During all major episodes of violence in Jos, armed mobs from Angwan Rogo marched into the nearby ethnically mixed area to fight against Christian groups from there and from the adjoining Christian strongholds. Because of this and despite no major incidents of violence within Angwan Rogo since 2001—there are simply no Christians to fight within—the neighborhood is still a notorious trouble spot. Along with a few other neighborhoods in the city center, it is an area frequently featured in media and official reports of riots in the city.

But Angwan Rogo was not always an ethnic stronghold. Although Muslims seem to have long dominated the settlement, Christians comprised up to 34 percent of the population in 1995 and 25 percent before the 2001 violence, as indicated in table 3.3. Regardless of its precise ethnic composition, Christians and
Muslims once peacefully coexisted, as many residents affirmed. An elderly former resident, now living in Furaka, contrasted the congeniality of the 1970s and 1980s to the present-day discord.

I remember how we used to celebrate Christmas there. Muslims would come to our house and eat whatever we had to offer. During their Salah [Muslim festivity], we would visit them and also eat with them... That is how it was, but something really went wrong and here we are. Today the situation is very different. I can't feel safe there and they can't feel safe here.\(^{31}\)

So what changed? Between 1990 and 2000, Angwan Rogo's ethnic composition transformed. Muslims grew from 64 to 75 percent, while Christians dropped from 33 to 25 percent. Everyday migrations may account for some changes, though three major events could well have spurred the demographic shift.

First, Jos experienced waves of in-migration as people fled the firestorm of violence engulfing parts of northern Nigeria in the 1980s and 1990s. Riots sparked by the Maitatsine fundamentalist group led to thousands of deaths and many more displacements in Kano, Adamawa, Gombe, and elsewhere. Christian-Muslim clashes in Kaduna in the late 1980s devastated communities and displaced thousands, some of whom sought refuge in the slum areas of Jos such as Angwan Rogo (Nyam & Ayuba 2016). It is also possible that—as personal discussions and one source suggest—some Maitatsine extremists settled in Angwan Rogo during military actions against them in northern Nigeria.\(^{32}\) These fugitives could have propagated their ideology of violent extremism among some residents of the neighborhood.

Second, once Jos North was created in 1991, the Hausa felt the new LGA belonged to them. Its emergence was mainly the result of lobbying by the JDA on behalf of the Hausa community. Once created, many Hausa who had no indigene status where they lived relocated to the new LGA, imagining they could easily gain status there. Many came from other parts of the metropolis, such as Bukuru;\(^{33}\) others came all the way from Bauchi. Once in Jos, these newcomers found Angwan Rogo a convenient place to settle down because of pre-existing social ties.

and cultural and linguistic affinity.\(^{34}\) Another event that affected the demography of Angwan Rogo was the low-level violence in parts of Jos in 1994. Four Muslim individuals were killed in these riots. The fact that all four killed were Muslims was a source of major grievance.\(^{35}\) Of the 104 people arrested in connection to the violence, twenty-one were Christian and eighty-three were Muslim. The disparity in number of arrests was also a source of frustration for many Muslims.\(^{36}\) A former Gada Biyu resident told me that a number of Muslims relocated from the area to seek safety in neighborhoods, such as Angwan Rogo, where their co-ethnics were in the majority.\(^{37}\)

Alongside the shifting Christian-Muslim ratios, social network dynamics were being shaken up. The ethnicization of neighborhood-based social networks in Angwan Rogo provides a salient example. Before the new LGA, residents’ association had no concrete religious or ethnic links. After its creation, however, the JDA found new prestige among residents of Angwan Rogo because it fulfilled Hausa wishes for Jos North. As a local politician noted of the JDA, “its role in the creation of the new LGA made the people have confidence in it.”\(^{38}\) The organization thus earned greater credibility and control over neighborhood-based civic structures in areas with a Hausa majority. In Angwan Rogo, prominent JDA members took lead roles in the residents’ association and, in turn, neighborhood association leaders became more involved in the JDA.\(^{39}\) This marked an important stage in the ethnicization of the residents’ association and, in time, vigilante groups. Furthermore, it all fit within the broader politicization of ethnic identities and associations, catalyzed by the SAP along with other factors at the national level.

Although the 1994 violence was low-level and Angwan Rogo remained nonviolent, it marked a crucial formative stage in the neighborhood’s militarization. It was the first time that some residents organized themselves into aggressive mobs on the basis of ethnic identity within Angwan Rogo. Brass (2004) noted how, in the Indian city of Meerut, violent riots in 1961 brought about the development of

“riot systems,”—violent networks enabling large-scale violence—decades later, in 1982. In Jos, the 1994 violence similarly readied the ground for the horrendous acts of 2001. Several informants, including former residents, recalled that although Angwan Rogo was technically violence-free during the fighting, tension was palpable and almost led to physical confrontations in some instances when dozens of young men mobbed around and threatened Christians. A former resident looked back on 1994’s implications for future group relations in the neighborhood.

It was simply because of God’s grace that there was no fighting in the area. The young people were moving around in groups angrily as if ready to attack. Fortunately, some older residents called some of the young men and cautioned them against engaging in violence... violence did not happen, but I can tell you some of us knew that it was only a matter of time. You can say that was the time that an army for future fighting really started building up.40

Nigeria’s return to a democratic system in 1999 heralded another phase in the evolution of Angwan Rogo. Research on the Banyamulenge of South Kivu in the DRC has demonstrated how clamor for political participation in Africa’s new democracies not only ossifies ethnic boundaries, but also facilitates “the shift to massive violence as an enticing strategy of control and resistance” (Vlassenroot 2002:499). Campaign rhetoric in Jos was strongly framed in ethnic terms. The PDP ran with the narrative that the ANPP was a political instrument for the takeover and Islamization of Jos by the Muslim Hausa. Christians bought into it, and soon churches provided platforms to campaign against an imminent “Islamic takeover” and for support of PDP candidates at various levels. In turn, ANPP stalwarts in Jos embraced a narrative of victimhood, saying that Muslims (and not just the Hausa) in Jos have been marginalized by Christians, who have monopolized positions of power and distributable resources.41 The reversal of Mato’s appointment and the resultant riots in which all four people killed were Muslims were commonly cited pieces of evidence to support the narrative. Muslim clerics championed the narrative and, analogous to what the churches were for the PDP, mosques were for the ANPP.42 Krause (2011:30) observed that “both politicians and religious

leaders” urged “their followers to vote along religious lines.” A respected religious leader, speaking before the 2015 elections, echoed the mood of Angwan Rogo back in 1999.

By the grace of Allah, Jos North cannot be rigged. Come to think of it, was there an election somewhere that was won and not announced? When it became apparent that we had won and they had to announce, did they not cancel the elections? For your information, this upcoming election cannot be cancelled and by force we shall win, Allah willing. Look, we are Muslims, over eighty percent of the people of Jos North are Muslims. We are not Christians. Do you think we shall vote a Christian to lead us in Jos North?43

Expressing solidarity with their co-ethnics around the city, Angwan Rogo residents did not leave onlookers to doubt which political party they supported. Several neighborhood-level party offices were located there, and they, along with many other buildings, were painted in ANPP official colors and flaunted the party logo. Almost four years after the ANPP merged with two other parties to form the APC, its green, white, and blue still showed on some walls in Angwan Rogo. But more than the aggressive campaigns that preceded the 1999 elections, an embargo on issuing indigene certificates to Hausa is what worsened Christian-Muslim relations and further polarized social networks in Angwan Rogo.44 Discussions suggest this development was particularly hurtful to the Muslim residents.45 Having lost the elections and being denied indigene certificates, the Hausa turned to what they were left with—their neighborhoods46—and feared these too could be taken away. Further exacerbating these fears, rumors that the Plateau State government was planning to relocate residents of Angwan Rogo started gaining traction.47

---

44 The indigene certificate is issued by LGA authorities to differentiate between indigenes and the migrants or settlers. It lets individuals benefit from scholarships, school admissions, employment quotas and tenured positions as heads of government ministries and agencies.
45 Discussions with residents, May 18, 2016.
46 Interview with NGO representative, July 13, 2012.
47 At this point in time, this was a rumor lacking government substantiation. The rumor later proved to have some truth when Jonah Jang, who assumed office as governor of Plateau State in 2007, initiated plans to implement the Jos Master Plan, an urban renewal project that sought to remove and relocated some sections of the city’s populations.
The Making of the Frontier

When popularized by Kotek (1999:228), the notion of the frontier was identified as something foremost located “on fault-lines between ethnic, religious or ideological wholes.” Second, it is a disputed area characterized by contestations and struggles for political control between rival groups. Third, it symbolizes greater conflicts, being “emblematic of larger disputed areas or zones” (Kotek 1999:231). Struggle for control in the frontier is thus not restricted to residents within the socio-spatial setting, but also involves actors from adjoining areas. For this study, I define the frontier as an ethnically mixed neighborhood between two rivaling segregated neighborhoods. Determining the dominant group is difficult, on paper anyway, because the two ethnic identities are proportionally represented. Jos’ frontiers have a presence of both Christian and Muslim institutions. The frontier is analogous to a contested boundary wherein the presence of the rival group is perceived as a threat (Legewie & Schaeffer 2016). This resonates with Jarman and O’Halloran’s (2001) “buffer interface,” used to argue that in Belfast’s contested landscape, ethnically mixed areas located between segregated settlements experience more violence than homogenous neighborhoods divided by sharp boundaries.

The frontier of Nasarawa Gwong has three elemental characteristics. It is ethnically mixed (see table 3.3). Christian and Muslim residents are represented by parallel civic structures and social networks. And it is located between two segregated settlements, each dominated by one of the rival groups. To the north is Angwan Rukuba, a Christian neighborhood, and to the south are the contiguous Muslim settlements of Dilimi and Gangare.

Apart from rivalry within, Nasarawa Gwong is characterized by struggles between rivals from adjoining strongholds, seeking to dominate Nasarawa Gwong. Ordinarily, mixed areas are plagued by internal conflicts, while the frontier suffers from struggles between rivals inside and outside its territory. In all major episodes of violence experienced in Jos, armed mobs from the Christian strongholds of Angwan Rukuba and Tina Junction axis marched into Nasarawa Gwong against advancing fighters from the Muslim strongholds of Dilimi and Gangare along with their co-ethnics in Fillin ball and Yan Shanu areas. Comparatively, more incidents of violence have occurred here than elsewhere in the city and it is recognized as one of the most notorious battlegrounds (Human Rights Watch 2009: 9).

But Nasarawa Gwong was also once a bastion of peaceful co-existence. Christian and Muslim residents belonged to the same neighborhood-based networks. Although ethnic identity determined social ties to some extent, the general sense of neighborliness and friendship transcended ethnic boundaries. As one elderly resident recalled: “It was not uncommon to find Christians and Muslims exchanging visits and, during elections, Christians voting for a Muslim candidate or Muslims voting for a Christian.”

So what went wrong? The same events and political developments that made Angwan Rogo a stronghold made Nasarawa Gwong a frontier. Jos North’s 1991 creation was one of the foremost causes of dissonance between Christian and Muslim residents in the area. Ethnic antipathy that befell the city was acute in Nasarawa Gwong and, according to one resident, polarized the neighborhood’s residents’ association.

At a point everyone knew we had to part ways. Muslims had their agenda and Christians had theirs. There was no way we could work together because there was no trust. The Muslims were celebrating the creation of the new LGA and Christians were very sad about the development. We just parted ways. Christian residents started having their meetings and Muslims also started having their meetings. But it was different before then, we used to have our meetings together... but that was before the creation of Jos North.

49 Interview with former neighborhood leader, May 13, 2016.
Besides going separate ways, social networks started aligning with their co-ethnics in the adjoining segregated settlements.

It was a situation where the Muslim in Nasarawa Gwong was closer to his Muslim brothers in Yan Shanu, Dilimi and Gangare than his Christian neighbors. The Christian in Nasarawa Gwong abandoned his Muslim neighbors and associated more with his Christian brothers in Angwan Rukuba and Tina Junction. Even the associations did the same thing. So you find vigilantes from here working with their brothers in the nearby settlements; no one wants to work with their neighbor who is of a different religion.50

Appointment of a Muslim as management committee chairman for Jos North, the 1994 riots, and acrimonious 1999 election campaigns all exacerbated the already worsening group relations between the Hausa and the indigenes in Nasarawa Gwong. The 1994 violence marked a crucial stage in the neighborhood’s polarization and militarization. Co-ethnics banned to form small armed groups and did a lot of surveillance work around their homes.51 Future events would illustrate just how the 1994 riots let groups in Nasarawa Gwong rehearse what would come seven years later.

During the 1999 election campaigns, Nasarawa Gwong was divided into two main political camps. Christians aligned with the PDP and Muslims with the ANPP.52 During the elections, youth networks were coopted to become campaign organizations. ANPP youth wings comprising Hausa young men staged campaign rallies and road shows in Fillin Ball, Yan Shanu, and elsewhere in the neighborhood. The politicking involved display and dissemination of political posters as well as directly engaging with residents. One former youth wing member who doubled as a vigilante described how he and his peers became part of ANPP’s campaign machinery.

The older and more established members of the party know that they need the youth to succeed. That is why they approached us as a group to enlist our support. But before working with them we gave them conditions. For example, we told them that we wanted employment, school admissions, and small loans to start businesses. These are some of the things that the youth needs and that is why we joined ANPP, because we saw that the

52 Interview with resident, May 17, 2017.
party members were the kind of people that would provide us with these things.\textsuperscript{53}

Indigene youth networks in Nasarawa Gwong also had major roles in organizing campaign activities for the PDP. One local politician said it was at the height of the 1999 elections that he and many Christian peers joined the youth wing. PDP was new then and they were looking for members. It was one elder in this area who approached me. I immediately agreed to join because he was a man I respected. I told some of my friends about it and they also joined. That was how we joined the campaigns. We started in this neighborhood, traveled to other towns, and still brought back the campaigns to this neighborhood because ANPP was also strong here, very strong.\textsuperscript{54}

Transboundary alliances existed between ethno-political networks in Nasarawa Gwong and its adjoining areas. PDP loyalists in Nasarawa Gwong organized joint campaigns with their counterparts from the adjacent Christian stronghold of Angwan Rukuba. ANPP supporters in Nasarawa Gwong collaborated with their co-loyalists in the Muslim strongholds of Yan Shanu, Dilimi, and faraway Gangare.\textsuperscript{55} This cross-border politicking led to skirmishes best described as turf wars between youth wings of the rivalling political parties at different stages of the campaigns.\textsuperscript{56}

Although I could not access any 1999 voting records for Nasarawa Gwong, my discussions with local politicians and eyewitnesses painted a picture of what happened. Ostensibly, the neighborhood proved to be a frontier where rival ethno-political networks from the adjoining areas competed to gain control of the polling units. Political activists and thugs working with local politicians from the Christian stronghold of Angwan Rubuka invaded and controlled those polling units nearest to them, notably those around Chwel-Nyap public primary school. Similar networks from the Muslim strongholds of Yan Shanu and Fillin Ball invaded and controlled the polling units around them. Table 3.4 shows voting patterns in some segregated and mixed areas of Nasarawa Gwong.\textsuperscript{57}

Although this data is based on 2015 elections, I was told by local politicians and other individuals that prior voting patterns were similar. Candidates’ ethnic identity was the biggest consideration for most voters. Polling units Ungwar UNA I and II formed the highly contested middle ground where each group struggled to extend the frontier of their political dominance. One eyewitness said that during the 1999 elections, he saw at least two fistfights and several heated verbal confrontations involving political thugs from neighboring areas. Is it surprising that this area provided the arena for some of the fiercest clashes barely two years later?

**Patterns of Violence in the Stronghold and the Frontier**

 Barely two years after the indigene certificate embargo, an incident animated the acrimony surrounding the question of indigeneity. In July 2001, the federal government of Olusegun Obasanjo appointed LGA coordinators for the National Poverty Eradication Program (NAPEP). Mukhtar Usman Mohammed, a Muslim Hausa, was appointed to head the agency’s Jos North branch. The indigenes rejected the appointment; the Hausa insisted it must stand. Bitter correspondence, posters, and handbills were the vehicles to swap threats. In different
neighborhoods, countless posters were slapped on walls or dropped in public places, bearing messages of hate and group's claims to be the more powerful. Nasarawa Gwong was a hotspot for the printed matter, with several residents recounting how posters and handbills were flying about in the weeks before violence erupted. One resident said about five posters were put up on the wall of his house.

After an interlude of uneasy calm—during which inflammatory exchanges still continued—the storm hit. Ethnic violence erupted in Jos on September 7, 2001. The triggering incident is well documented in academic and official reports (see Human Rights Watch 2001; Best 2007; Ostien 2009; Higazi 2011; Krause 2011), though a recap here suffices. That day, a young Christian named Rhoda Haruna Nyam was on her way to lunch and insisted on passing a group of Muslims who had blocked the road as they usually did during Friday prayers. An altercation ensued following an attempt to prevent the woman from accessing the route. Accounts differ on what happened from this point onwards, but one account, consistent with what one resident of the neighborhood told me, is that she ran back to the Christian-dominated part of the neighborhood and shouted for help. Shortly afterwards, Christian and Muslim residents of the neighborhood engaged in a series of attacks and counterattacks that, within surprising swiftness, spread around the city. Once the violence was underway, it was clearly no longer indigenes versus Hausa, but rather Christians and Muslims attacking each other.

Researchers and NGOs have documented the violent events that transpired from September 7 to 12, 2001, and in some instances, highlighted their spatial patterns (see Human Rights Watch 2001; Best 2007; Higazi 2007; Ostien 2009; Krause 2011; International Crisis Group 2012). Higazi (2007: 17) described the mass killing of Christians in the Muslim-dominated areas of Angwan Rogo, Angwan Rimi, Bauchi Road, Sarkin Mangu, and parts of Nasarawa Gwong as well

62 Discussions with a cross section of residents in Nasarawa Gwong, 14 April, 2016.
as the mass killing of Muslims in the Christian-dominated areas of Angwan Rukuba, Jenta Adamu, Bukuru Road, and Zaria Road. Krause (2011) noted similar patterns of violence, how Angwan Rogo became “exclusively Muslim” after the attack on the Christians there, and how Christians attacked and drove Muslims out of Apata. Further, she observed how the ethnically mixed area of Ali Kazaure “became a battleground between both groups” (Krause 2011:36).

These accounts in the literature and my research help illustrate how patterns of violence varied between ethnically segregated and mixed neighborhoods. Drawing from established understandings of “patterns” of violence (Tilly 2003; Kalyvas 2006, 2012; Gutiérrez-Sanín & Wood 2014, 2017), I adopt an interpretation that distinguishes between two types of “patterns”: pogroms in the form of asymmetric attacks by the majority on a defenceless minority; and clashes in the form of symmetric combat between groups. Patterns of violence can be categorized into far more forms, but these categories here suffice.

In segregated areas and neighborhoods that were clearly dominated by one rival group, members of the dominant group attacked the minority in a series of pogroms. Fighting was principally asymmetric, with the minority mainly on the defensive. As the literature documents, in Angwan Rogo, large mobs of Muslims attacked Christians. Armed with sticks, knives, machetes, bows and arrows, guns, and petrol bombs, the irate crowds moved from one Christian home to another, killing, maiming, and burning. They spared women and children in only some instances. The Christians, who were heavily outnumbered, did not fight back. Two churches, homes belonging to Christians, and other properties were destroyed. Casualties included many University of Jos staff and students residing in the area because it was close to campus (Human Rights Watch 2001).

Violence assumed a different pattern in ethnically mixed Nasarawa Gwong. One neighborhood resident described it as “a war where groups stood at a distance and shot at each other and occasionally engaged in close combat.”63 This is consistent with Krause’s depiction of the violence unfolding “along improvised front lines” (cited in Human Rights Watch 2001: 9). Different parts of Nasarawa

63 Interview with resident, April 17, 2016.
Gwong including Duala, Bulbula, and Angwan Keke were battlegrounds where Muslim and Christian mobs from the adjoining areas clashed repeatedly. These clashes resulted in hundreds of killings, injuries, and massive destruction on both sides.

After six days of fighting, the military restored order. It is estimated that at least 1,000 people were killed (Human Rights Watch 2001:9), though some sources claim it may have been 3,000 (see Danfulani & Fwatshak 2002). Angwan Rogo, alone, saw hundreds murdered and the destruction of dozens of houses. In Nasarawa Gwong and surroundings, over a hundred people were reportedly killed and countless homes, businesses, vehicles, and other properties demolished. The most obvious aftereffect of the violence in the stronghold was increased segregation. Survivors fled to temporary camps for displaced persons that dotted the city in the following months; later they found shelter in co-ethnic-dominated areas. The Muslim neighborhood of Angwan Rogo hence became homogenous, as did the Christian neighborhood of Apata (Krause 2011:36). The ethnic composition of the residents’ association, the vigilante groups, and other neighborhood-based organizations thus also became homogenous, further blurring the boundary between civic structures and ethnic associations. The frontier neighbourhood of Nasarawa Gwong also experienced displacements and relocations, with Christian and Muslim residents each receding into the adjoining strongholds. Many Christians relocated from the neighborhood’s north to seek refuge in the Christian strongholds of Angwan Rukuba and Tina Junction or even farther towards Furaka. Some Muslims around Angwan Rukuba junction and Dutse Uku also relocated south, towards Fillin Ball, Yan Shani, and deeper into Dilimi and Gangare areas. The proportion of Christians to Muslims decreased but not significantly, as table 3.5 shows.

64 Interview with youth leader in Congo-Russia, March 11, 2016
Insecurity and fear are known to precipitate segregation (Rodgers 2004:113). Members of both groups, especially those living in more ethnically diverse areas, showed some unwillingness to leave. Even some who fled these areas later returned. As a result, some parts of the city remained ethnically mixed and were the main battlegrounds for violence in 2008 and 2010.

**Conclusion**

Scholars have devoted attention to the SAP’s devastating ramifications for Nigeria, creation of Jos North LGA, the country’s return to a democratic government, and an embargo on issuing indigene certificates to the Hausa in Jos. This article, however, focused explicitly on how these events transformed Jos’ neighborhoods from mundane residential areas into spaces of ethnic differentiation and violence. It provided a fine-grained analysis of the dynamics of violence within and across neighborhood boundaries. The article thus builds on existing literature and adds value to the practice of responding to ethnic violence in several important ways.

To start with, in ordering neighborhoods into ethnic strongholds and frontiers and tracing the processes that underpin their emergence and development, the article elucidated a useful conceptual framework for coherently investigating, understanding, and explaining variations in the spread and patterns of violence in a divided city. Rather than conceiving of violence as completely chaotic, haphazard, and decontextualized from its socio-spatial context, the concepts uncovered how patterns of violence recursively interrelate with the demographic and physical environment in which they occur. Thus, as demonstrated, ethnic strongholds and frontiers are both a consequent and a predicator of particular violent forms.

Moreover, the cross-sectional approach of most studies on spatial patterns of violence offers a snapshot, failing to capture the dynamic socio-spatial conditions that support and shape violence. The processional approach adopted in
this article focused on the spatial as well as the temporal dimension of how neighborhoods transformed. Doing this brings into sharp relief how ethnic composition, social networks, and location of the neighborhood all interact in space and over time. In unearthing how Angwan Rogo became progressively more segregated, I also uncovered how its social networks became increasingly intra-ethnic. Accordingly, as group relations deteriorated in Nasarawa Gwong, residents’ associations and vigilantes became decentralized and parallel networks emerged along ethnic lines.

Tracing these processes of transformation revealed how a neighborhood’s ethnic composition and location can affect its evolution. Nasarawa Gwong’s ethnic composition and its location between segregated settlements contributed to transforming into a frontier. This insight has important implications for policy. It calls for peace-builders to examine a neighborhood’s location vis-à-vis adjoining neighborhoods and to respond in ways that consider group solidarity in the stronghold, multilevel competition and contestations in the frontier, and their developments over time.

Additionally, exploring the very events and processes that helped transform the neighborhoods has revealed possible inroads for managing conflict and mitigating violence. This exploration shines a light on milestones that mark strategic points for intervention. For example, it is clear that periods preceding elections are characterized by hikes in ethnic activism and at these critical times violence is most likely to erupt. It is also clear that political appointments negatively impact social networks. This understanding can help authorities design context-sensitive proactive strategies for preventing violence. Such measures could include civic structures to monitor and check use of divisive rhetoric by politicians within neighborhoods during electoral campaigns.

This article is a first step in exploring the spatial patterns of violence in a riot-ridden city. To further understand the concentration and persistence of violence in particular socio-spatial contexts, we need to zoom in on frontiers. Understanding in detail the causal mechanisms that make frontiers sites of persistent violence will, besides advancing knowledge on the dynamics of ethnic violence, contribute meaningfully to finding effective response to violent riots.
