In this Supplementary material we prove that Protocols 1 and 2 generate the desired correlation (equation (1) of the main text), or in other terms, \( P(a = b|\mathbf{x}, \mathbf{y}) = \frac{1 - \pi}{2} \).

**Correlation from Protocol 1**

We first note that the definitions of \( a = \text{sign} (\text{sin}(\phi_A^2)) \) and of \( \phi_A' = (\phi_A - jA \frac{\pi}{4} \mod \pi) \in [0, \frac{\pi}{4}] \) on Alice’s side, and the definitions of \( b = \text{sign} (\text{sin}(\phi_B^2 - jA \frac{\pi}{4})) \) (and then of \( b = \pm \beta \)) and of \( \phi_B' = (\phi_B - jA \frac{\pi}{4} \mod \pi) \in [0, \pi] \) on Bob’s side, ensure that the following relations hold, as required:

\[
P(a = b|\phi_A, \phi_B) = P(\mathbf{x} = \mathbf{y} | \phi_A, \phi_B + \pi) = P(a \neq b|\phi_A + \pi, \phi_B) = P(a = b|\phi_A + \pi, \phi_B + \pi) = P(a = b|\phi_A + j\frac{\pi}{4}, \phi_B + j\frac{\pi}{4}) \text{ for any } j \in \mathbb{Z}.
\]

It is therefore sufficient to check that the correct correlation is obtained for \( \phi_A \in [0, \frac{\pi}{4}] \) and \( \phi_B \in [0, \pi] \).

For such values of \( \phi_A, \phi_B \) (for which \( \phi_A' = \phi_A \) and \( \phi_B' = \phi_B \)), the probability \( P(a = b|\phi_A, \phi_B) \) obtained from Protocol 1 can be calculated as follows:

\[
P(a = b|\phi_A < \phi_B - jB \frac{\pi}{4}) = \left( \frac{16}{\pi} \right) \left( \int_{0}^{\phi_A} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) + \int_{0}^{\phi_B - j\frac{\pi}{4}} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) \right)
\]

\[
+ \left( \frac{16}{\pi} \right) \left( \int_{0}^{\phi_A} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) + \int_{0}^{\phi_B - j\frac{\pi}{4}} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) \right)
\]

\[
+ \left( \frac{16}{\pi} \right) \left( \int_{0}^{\phi_A} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) + \int_{0}^{\phi_B - j\frac{\pi}{4}} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) \right)
\]

\[
+ \left( \frac{16}{\pi} \right) \left( \int_{0}^{\phi_A} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) + \int_{0}^{\phi_B - j\frac{\pi}{4}} d\lambda_{AR} \int_{0}^{\lambda_{AR}} d\lambda_{RB} \varphi_{010}^{AB}(\phi_B - \lambda_{RB}) \right).
\]
and

\[ P(a = b|\phi_A \geq \phi_B - j_B \pi 4) = \frac{16}{\pi^2} \left( \int_0^{\phi_n - j_B \pi 4} d\lambda_{AR} \int_0^{\lambda_{AR}} d\lambda_{RB} \psi_{001}^{j_B} (\phi_B - \lambda_{RB}) \right. \]

\[ + \int_0^{\phi_n - j_B \pi 4} d\lambda_{AR} \int_0^{\phi_n - j_B \pi 4} d\lambda_{RB} \psi_{011}^{j_B} (\phi_B - \lambda_{RB}) + \int_0^{\phi_n - j_B \pi 4} d\lambda_{AR} \int_{\phi_n - j_B \pi 4}^{\pi} d\lambda_{RB} \psi_{101}^{j_B} (\phi_B - \lambda_{RB}) \]

\[ + \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{AR} \int_0^{\phi_n - j_B \pi 4} d\lambda_{RB} \psi_{000}^{j_B} (\phi_B - \lambda_{RB}) + \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{AR} \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{RB} \psi_{000}^{j_B} (\phi_B - \lambda_{RB}) \]

\[ + \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{AR} \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{RB} \psi_{110}^{j_B} (\phi_B - \lambda_{RB}) + \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{AR} \int_{\phi_n - j_B \pi 4}^{\phi_n} d\lambda_{RB} \psi_{110}^{j_B} (\phi_B - \lambda_{RB}). \]

One can then check that with the choice of functions \( \psi_{CABB}^{j_B} \in [0,1] \) indicated in Table I (see main text), this leads (for all values of \( j_B \)) to

\[ P(a = b|\phi_A, \phi_B) = \frac{1 - \cos(\phi_A - \phi_B)}{2}, \]

as desired.

**Correlation from Protocol 2**

After running Protocol 2 for inputs \( x = (\sin \theta_A \cos \phi_A, \sin \theta_A \sin \phi_A, \cos \theta_A) \) and \( y = (\sin \theta_B \cos \phi_B, \sin \theta_B \sin \phi_B, \cos \theta_B) \), the probability that Alice and Bob’s outputs are the same is

\[ P(a = b|x, y) = \sum_{a_0, b_0 = \pm 1} P(a_0, b_0|\phi_A, \phi_B) P(a = b|\theta_A, \theta_B, a_0, b_0) = \sum_{a_0, b_0 = \pm 1} P(a_0, b_0|\phi_A, \phi_B) \frac{1 - \cos(a_0 \theta_A + b_0 \theta_B)}{2} \]

\[ = P(a_0 = b_0|\phi_A, \phi_B) \frac{2}{2} \left[ 1 - \cos(\theta_A + \theta_B) \right] + P(a_0 \neq b_0|\phi_A, \phi_B) \frac{2}{2} \left[ 1 - \cos(\theta_A - \theta_B) \right] \]

\[ = \frac{2}{2} \left[ 1 - \cos(\phi_A - \phi_B) \right] \frac{2}{2} \left[ 1 - \cos(\phi_A + \phi_B) \right] + \frac{2}{2} \left[ 1 + \cos(\phi_A - \phi_B) \right] \frac{2}{2} \left[ 1 - \cos(\theta_A - \theta_B) \right] \]

\[ = 1 - \cos \theta_A \cos \theta_B - \sin \theta_A \sin \theta_B \cos(\phi_A - \phi_B). \]

Protocol 2 thus reproduces the desired entanglement swapping correlation (equation (1) of the main text).
