ML X-ray analysis

JR supervision of the project
Acknowledgements

This last part will be dedicated to thank all the people that have been involved and supported me in this project. Starting this thesis was a personal challenge that resulted in the most interesting professional story I have experienced. Doing this thesis enabled me to learn a profession and, more importantly, allowed me to improve myself through everything I have learnt the last years and also through the situation that I had to face to achieve this. It has also been for me the opportunity to discover the beautiful country of Nederland and to meet fantastic people.

First of all, I would like to express all my gratefulness to my supervisor, Joost Reek. Dear Joost, five years ago, you gave me the opportunity to enter you research group and gave me the chance to make a turn in my professional and personal life. Working with you in such a stimulating atmosphere was definitely the most exciting period of my professional life. You taught me how to become an independent scientist, following my intuitions and also teaching me the responsibility of the decisions that I had to take in my research plan. I did my best to follow every advice (professionally and personally) you gave me and I hope that the work done during my thesis is contributing to the group as you wished when you hired me. Then, I would like to thank my co-promotor, Bas de Bruin. Bas, thank you very much for the support and the very good comments during my PhD. I learned a lot about computational chemistry thanks to you and I am very glad for the work done on the manuscript through your valuable comments. I also enjoyed a lot the interesting talks and good moments we had several times outside the lab. I would like to thank another member of the Homkat staff that has a considerable place in the achievement of this thesis, Jarl Ivar van der Vlugt. Jarl, thanks a lot for being always available when I needed and for the very good advices you gave me on multiple occasions. I will keep a very good memory of the late night playing guitar and singing together during the last lab outing. Also, thank you for the X-ray structures determination and for the help with the experimental section of the thesis. I also would like to thank the members of my thesis committee (Prof. Jan van Maarseveen, Prof. Evert Jan Meijer, Prof. Kees Elsevier, Dr. Moniek Tromp, Prof. Anton Vidal, Prof. Adriaan Minnaard) for their comments/feedback on the thesis manuscript.

At this point, I would like to thank the persons without whom I might not have had the courage to start a PhD, my family and my friends. I would like to thank in particular my mother, Nelly Daubignard, and my brother, Gregory Daubignard. Maman, Greg, merci pour tout. La réussite dans l’accomplissement de ma thèse vous revient directement. Votre aide et votre soutient à chaque instant et à chaque événement qui sont survenus ces dernières années m’ont permis de réaliser ce projet qui était vraiment très important pour moi. Grace à vous et à cette expérience,
Acknowledgements

je regarde maintenant vers l’avenir et je suis heureux a l’idée de vivre ensemble tous les bons évènements futurs qui nous attendent. Je voudrais remercier les autres membres de ma famille et mes amis en France qui m’entourent et me soutiennent depuis toujours : Mes grand-mères (mami Vovonne et mami Geo), Alex, Christophe, Sophie, Margaux (je suis très fier de toi pupuce), Mimi et Claire, Christou et Elena, Henrique, Damien et Mag, Nono et Ben, Fafa, David, Agnes et Jade, Nina et Renaud.

Living in Nederland is for me an extraordinary experience in which I have discovered a beautiful culture associated to a very pleasant way of life. More importantly, I met amazing people that welcomed me and accepted me rapidly and, in this way, helped me to feel at home. However, living abroad was sometime a difficult experience for me and, for this reason, I would like to thank all the people that have been here for me in Nederland, in my everyday life, in the good and the bad moments. First, I would like to thank my paranymphs: Yann Gloaguen and Bart van den Bosch. Yannou, un très grand merci pour ton aide des 5 dernières années… Ton soutien a été très important pour moi aussi bien sur le plan professionnel (et tes excellent conseils dans le laboratoire) que sur le plan personnel. Nos longues discussions, moments de musique et de fête m’ont beaucoup aidé, tantôt à faire le point, tantôt à faire disparaître le mal du pays. Barfi, I would like to thank you (and our lovely Jannecke) for your unconditional help every time I have been in need. The thesis is done and now the time is for enjoying and I am very looking forward to continue sharing superb moments of fun all together! The beginning of my PhD was very difficult, especially in the moments when my technical skills needed to be improved and when synthesis problems were constantly here. Fortunately, I have been lucky to start working next to Pawel Dydio, in the office and in the lab. Pawelito, thank you for sharing your excellent scientific skills with me and teaching me so much about chemistry. You supported me a lot, working very late together and relaxing with drinks (together with Yannou) when the days were long, unsuccessful and that the bad mood was showing up. Your advices and your friendship definitely helped me to overcome the difficult early times and I don’t know if I would have made it this way without all what I learned from you: nicetublief buddy! Now, I would like to thank the person that helped me a lot in the difficult moments encountered at the end of my thesis, Evelien Busschers. Schatju, thank you for opening your home to me and for your everyday support, which is very important to me. Thanks for everything and I am looking forward to the future that, I am sure, will be great!! I also would like to thank the amazing Martin Koelewijn for his timeless-dependent help at multiple occasions. Marvin, first of all, thanks a lot for the help with the samenvatting of this thesis. I also would like to thank you a lot for your help with the stopped-flow measurements that had required you to stay very late at night to help me. Merci
mon ami! I would like to thank my friend René Becker for the excellent (musical) times spent together. René, thanks for your help, advices and your generosity during the last years. Man, time is on our side! J’en profite pour remercier Sandra (Nuttrila) pour être la plus cool (et l’unique) franco-finlandaise que je connaisse! I also would like to thank Brittany Alexander for her support during the period of my PhD.

Thank you to all the present and past members of the lab E-1.18! So many songs, jokes, interesting chemistry shared and the not-necessary-but-famous “Friday afternoon playlist”. Thanks to all of you: Yasemin (thanks for your friendship and for being so nice), SanderO, Fred, Andrea, Mona-Lisa, Dannito (thanks a lot for your help man!), Stefan, Arnoult (thanks for the help with the cover of the thesis!), Lukas, Sergio, Qiqiang (Qiqiang, thanks for teaching me so much about chemistry and for having such a nice happy personality!). I also would like to thank all my others very nice colleagues from the group: Wojciech, Marc, Fenna, Sandra (de boer), Andrei (always great parties at your place man!), Anne (nice work done together on the phosphine oxide project!), Paul, Zhou, Vincent (great cello player! We should play more often!), Simon, Colet, Joeri, Christophe, Bid, Xiaowu, Saeed, Bin, Shaotao (good luck with the PhD!), Braja, Kaj, Vivek, Riccardo and Linda. Thanks also to the lab technicians that were here to help/assist me with fixing the equipments when needed: Taasje (thanks a lot for being always available and a big thanks for the ticket concerts! Super nice!), Erik and Fatna. In my research, I received lots of help from the NMR team and I would like to thank Jan Geenevasen Jan-Meine Ernsting and Ed Zuidinga. Jan-Meine, Thank you very much for all the help with the high pressure experiments and for training me with the equipment and the methods of NMR. I really appreciated your availability even when I was calling you late at night on your personal phone. Ed, it’s a real pleasure to be working with a devoted and very professional colleague like you.

Another chapter of my life in chemistry recently started when I have been given another great opportunity: working as a postdoctoral fellow with Sander Kluwe. Sander, I am so grateful that you give me the chance to continue working on such interesting chemistry and in such a nice atmosphere. We are going to make excellent “ohlala” chemistry! I would like to thank my other colleagues from InCatT: Zohar (really nice talks and funny moments in the lab!) and Lidy (Thank you very much for all the very good tips in the lab). Also, I really want to thank a lot a former member of InCatT: Remko Detz. Remko, thank you for all the time and the energy we spend together on the preparation and on performing the gas-uptake experiments! That was long and painful but we finally made it!
I also would like to thank the former members of the group. I have especially appreciated the very nice way I have been welcomed when I arrived in the group 5 years ago by the past generation of Homkat members: Rosalba, Dennis, Sofia, Anne-marie, Nicole, Alma and Ivo (we have to see each other soon! Thanks for all the good time spent together), Tati (merci de ton soutien dans les durs moments au labo), Lezsek, Eleonora, Pierre (Goodbye marylou!), Samir, Avi, Christina, Nanda and Sutanuva, Mathias, Rafa (merci d’être aussi cool!), Julia and Pauline. Thanks also to the very friendly students that did (or are doing) an internship in the group: Hocine (super bon musicien!), Klaas, Marianne, Lianne, Margje, Ludwig, Tjimen, Jelmer, Alessa, Lotte and Massimo.

The close relation with the other groups of the HIMS institute also largely contributes to the nice and stimulating atmosphere in the Homkat research group. Therefore, I would like to give very warm thanks to all the very friendly colleagues from the Molecular Inorganic Chemistry group: Kees (thanks for accepting to be in my committee and for the nice talks in French), Ruben, Dorette, Ties, Joen (we are gonna rock buddy!), Soraya (it seems like I will have to organize a Casablanca evening!), Zea, Vlien and Santi. I also would like to thank my colleagues from the Molecular Photonics group (Tomi, Sergio, Tatu, Saeed) and from the Organic Chemistry group: Stanimir and Danijela (thanks a lot guys for your kindness! It is always a pleasure to spend some time with you and I hope we will continue having fun together), Camille, Roel and Gaston.

My experiences in the pharmaceutical company Sanofi-Aventis and my studies in France have been an essential part of my formation and therefore I would like to thank my supervisor at Sanofi-Aventis and friend: Olivier Bedel. Olivier, merci énormément pour ton aide très précieuse qui m’a permis d’atteindre ma situation professionnelle actuelle. Merci aussi pour tous les bons moments partager ensemble et qui j’espère seront encore nombreux malgré la distance. Je voudrais aussi remercier les personnes qui m’ont donné la possibilité d’intégrer la compagnie Sanofi-Aventis : Mr Henri Bosetti et Mr Serge Mignani. Je voudrais aussi remercier mes professeurs de la faculté d’Orsay qui m’ont enseigné les bases de la chimie et transmis leur passion pour les sciences: Mr Jean-Paul Audiè re et Mr Philippe Pigeon.

Finally, to conclude these acknowledgments and this thesis, I would like to thank my father, Alain Daubignard, for having transmitted me his passion for chemistry. This thesis is dedicated to him.

Julien
