# THE DISCOVERY OF GLUA3-DEPENDENT SYNAPTIC PLASTICITY

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor

aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties

ingestelde commissie,

in het openbaar te verdedigen in de Agnietenkapel

op vrijdag 25 november 2016, te 10.00 uur

door

María Constanza Renner

geboren te Buenos Aires, Argentinië

## **Promotiecommissie**

Promotor: prof. dr. E.M. Hol  
Copromotor: dr. H.W.H.G. Kessels  
Overige leden: prof. dr. W.J. Wadman  
prof. dr. P.J. Lucassen  
dr. H.J. Krugers  
prof. dr. C.I. de Zeeuw  
prof. dr. S. Rumpel

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

The research described in this thesis was conducted at the Netherlands Institute for Neuroscience, an institute of the Royal Netherlands Academy of Arts and Sciences, Amsterdam, The Netherlands.

This project was financially supported by the Netherlands Organization for Scientific Research (NWO).

## TABLE OF CONTENTS

<b>Chapter 1. General introduction</b>	7
1.1 Learning and memory	9
1.2 Synaptic plasticity and learning and memory	10
1.2.1 Historical overview	10
1.2.2 Synaptic plasticity: LTP and its link to learning	11
1.3 The hippocampal formation	14
1.4 The cerebellum	16
1.5 Glutamate receptors	17
1.5.1 GluA1	19
1.5.2 GluA2	21
1.5.3 GluA3	22
1.5.4 GluA4	23
1.6 Alzheimer's disease	24
1.7 Scope of this thesis	26
References	28
<b>Chapter 2. Synaptic plasticity through activation of AMPA-receptor subunit GluA3</b>	37
Abstract	39
Introduction	39
Results	41
Discussion	57
References	61
Supplementary figures	66
Experimental procedures	71
References	75
<b>Chapter 3. Motor learning requires Purkinje cell synaptic potentiation through activation of AMPA-receptor subunit GluA3</b>	77
Abstract	79
Introduction	79
Results	80
Discussion	98
References	102
Supplementary figures	106
Experimental procedures	115
References	122
<b>Chapter 4: AMPA-receptor subunit GluA3 makes synapses susceptible to amyloid <math>\beta</math></b>	125

Abstract	127
Introduction	127
Results	129
Discussion	141
References	144
Supplementary figures	147
Experimental procedures	151
References	155
<b>Chapter 5: Discussion</b>	157
5.0 Summary	159
5.1 The role of GluA3-plasticity in the hippocampus	161
5.1.1 Synaptic replacement	161
5.1.2 Information flow enhancement	162
5.1.3 Adaptive behavior	163
5.1.4 Functions mediated by other triggers	163
5.2 Susceptibility of GluA3-containing synapses to amyloid $\beta$	164
5.3 Distinct characteristics of GluA3-plasticity in the hippocampus and cerebellum	165
5.4 Future directions	167
References	169
Samenvatting	171
Acknowledgements	173
