Acknowledgments

Here is finishing this PhD thesis, so it is time to acknowledge the people that contributed to this masterpiece. I must say that I imagined many time what I would like to write as acknowledgments. It is very difficult to write and describe my emotions, so these words might not totally reflect how I feel. For sure, I also forget some people that at some point were important during these almost five years. If you are one of them and you are reading these lines … then, bad luck!

First, I would like to thank my co-promoter Harrold. Working together has been quite a challenge, but this PhD thesis eventually sees the day. I think that it took a while, but we both eventually found kind of an equilibrium in our way of working, to make it finally successful. I would like to thank you for having being always available when I needed it, and for all the time you dedicated to me, ranging from correcting the writing of this thesis to helping for experimental problems, having countless long meetings or making me practice my talks. I also learnt from you, of course on a scientific point of view: for instance, you taught me genetics (almost) from scratch, which said like this seems to be quite a piece an achievement. But most importantly, I can see now with a bit of retro perspective that I extensively developed on a personal aspect by working with you, though in an unexpected way. For instance, I developed skills like perseverance, project management or team management. I also strengthened (if needed) my stubbornness and learnt how to assert myself. I really appreciated that you were also always supportive when I wanted to follow “personal development” courses, and you were also always open to give me feedbacks (scientifically or on personal development). You also fought to get me a contract extension, which demonstrates that you believed in me, my project and my capacity to finish this PhD, even though it was far from being completed at this time. In addition, I greatly appreciated that you have adapted (especially in the last year) your way of working and management to let me quite some freedom in the management of my project. All in all, even though this PhD was tough, working with you would have been very enriching.

I would like also to thank my promoter, Ben, first for having believed in me at the beginning and made me join the team, for having encouragement me in the end of my PhD for setting up real outline and finishing, and for the time you spent on the different chapters of this thesis. In addition, I would like to thank Frank and Martijn. Frank, your knowledge on sumoylation has been really useful, and you often came up with great suggestions. Thank you for having always been available when I had questions or needed to be adviced. Also, thank you for having stood the countless improvised meetings I had in your office. Martijn, thank you for always having been involved in my projects and tried to find solutions when I was
stuck even though sumoylation is so far from your research. Your wise advice all along this PhD was very helpful. I am grateful to the two of you for your support, your critical and/or interesting comments on my project, and all the constructive discussions (science related or not) we had.

**Petra, Hanna and Dirk-Jan**, I would like to thank you for all the support and help you gave me in the lab and for the organisation and management in general. I want you to know I greatly appreciate the inputs you provide(d). Moreover, you may have noticed that I tend to be a little bit disorganized from time to time. I would like to thank you for never getting mad (or almost never 😊) by my mess, for keeping calm when seeing me expending my bench (from 1 bench to 2,5 at some point), my drawers in the freezers (secretly using extra drawers in other fridges), or my shelves in the cold room. I also had the honour of being the most cited name in the mails for the Arabidospsis rounds. I know that the “flowering plants” chapter was a tricky one to handle. I would like to thank the three of you, as well as **Ringo** and **Ludek**, for having never trashed my valuable plants, even though I know it was sometimes tempting!

During this PhD, I often had the feeling of being by my own on this project. However, zooming a little bit out when finishing, I realized how much **Georgios**, **Bas** and **Sayantani** brought to this work. **Georgios**, I really appreciate your serenity and calm in front of any situations. Your professionalism taken with your fun makes you a great person to work with. **Sayantani**, I appreciated a lot your help to finish experiments especially in the end, and I really enjoyed your fun. **Bas**, or should I say Mr. Perfect Blots, I was amazed on how quickly your picked up on the project, and by the quality of the results you obtained. I think I gained a lot by you joining the SUMO team, and I thank you for all the help you provided to this PhD thesis. I would like to warmly thank the three of you for what you respectively brought to this thesis.

**Of course, there were also other members in the SUMO group. Magda**, you were more than a simple SUMO-mate. I had such great times with you, both in and outside working times. We were on the same boat and we both went through tough times. You helped me a lot for dealing with these tough times, and I am very grateful for that, and I will keep in mind all the great moments with a lot of laugh we shared. **Francesca**, I am sorry, but you do work with SCE1, so you fully are a SUMO-mate, whether you want it or not! It was great to share the office, lunches, coffee breaks and generally fun with you. You were my favourite target at anytime I could express my clumsiness, so I thank you for having always been here as collateral damage! I wish you all the best for the rest of your PhD.
Two HLO students had the great privilege of being under my supervision during this PhD: Jeffrey and Sonia. I wanted to tell you that it was a very nice experience to supervise you. Not only do your respective results contribute to this PhD thesis, but also I learnt a lot on management with you. Thank you, and all the best for the future.

I would like also to thank all the people, from phytopathology and plant physiology, or UvA in general, that either helped me on a scientific aspect, or just were fun to be with. I would especially like to thank (in an arbitrary order): Peter (for your availability when I had a question or needed help e.g. bioinformatics, Dutch administration and the RGB->CMYK last minute conversion, for all the energy you spent in organisation of social events and for the fun in general to have you around), Marijn (for being able to unexpectedly drop either the cleverest or stupidest sentence I would hear during the day, simply for the great fun you brought in the team, and of course for being my paranymph. I only regret that you joined so late the group), Ido (for the great fun shared with you in the lab, for the fun having beers at Science Park or at borrels and parties, and for the jokes about French people, beers and sex), Sherminen (for all the fun we shared), Like (thanks for the fun, and your advice/comments on presentations or on the genomic evolution paper), Blaise (for all the fun and super deep conversations), Patrick (for all the help with administration and Dutch language in general, and for putting so much effort on introducing me the Dutch culture). Many people are not mentioned here. I would like to thanks all the people I had good times with during my PhD and are not cited! If you think you deserved a special big-up, please forward me a request and I will consider your case for the next time.

Going through this PhD thesis was far from being a piece of cake. Switching off my brain from science was essential not to blow a fuse. Hence, I would like to warmly thank all the persons that are unable to understand a single sentence of this PhD thesis, but are, however, reading these lines. I met so many interesting people during these almost five years. I would like to thank specifically the “core” of my friends that had remained in Amsterdam now (in alphabetic order Arthur – Jeanne – Julie – Mathilde – Tobias), but I do not forget all my friends that currently lives in Amsterdam or left at some point! A super special big-up for Lap’ for being my paranymph, for always losing at Virtua tennis and Virtua striker and consequently reinforcing my self-confidence status, and for having designed the amazing cover of this PhD book. Thanks to all the “graphic designers”, thanks to you I can now make jokes about “comic sans”, I use the expression “je suis charrette”, and I know the difference between print and web design now. I will not describe all the great memories I have (with graphic designers and non-graphic designers), but I want to let you know I have had a blast. All the boat and sail trips with you were particularly cool. I am also super grateful to all my friends from Dijon, Lyon, Paris or wherever you live. Meeting there, or elsewhere, or simply getting some rest in the mud of Dour was a real breath of fresh air!
Je voudrais bien sûr remercier du fond coeur ma mere, mon père et mon frère Nat pour leur soutien inconditionnel durant ces longues années, et pour m’avoir toujours convaincu de ne pas baisser les bras.

And finally, my greatest thanks go to you, Sarah. Not only have we had so much fun in and outside work from the beginning to the end, but also you have been for me an unconditional support all along this PhD. I learnt in science with you, but that is nothing compared with what I also learnt in other aspects like how to tackle some issues, management, team work, career choice, or values in general through countless enriching discussions. In addition, you contributed a lot to switch off my brain from this PhD, being always up for dress-up parties (great Cleopatra costume by the way), for boat trips on the Amstel, or for chilling at Ubuntu for instance. You encouraged, helped and cheered me up every time I needed it and I would have probably quit several times without your support. For all of this, I just want to let you know that I am thankful to you from the bottom of my heart.

Val
