Adaptive governance of disaster: Drought and flood in rural areas

Hurlbert, M.

Citation for published version (APA):
Adaptive Governance of Disaster

Drought and Flood in Rural Areas

Margot A. Hurlbert
May, 2016
ADAPTIVE GOVERNANCE OF DISASTER: DROUGHT AND FLOOD IN RURAL AREAS

ACADEMISCH PROEFSCHRIFT
ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. D.C. van den Boom
ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Aula der Universiteit
op vrijdag 13 mei 2016, te 11 uur
door Margot Hurlbert
geboren te Kinistino, Canada
Promotiecommissie:

Promotor(es): Prof. Dr. J. Gupta, Universiteit van Amsterdam

Copromotor(es): Dr. H.J.L.M. Verrest, Universiteit van Amsterdam

Overige leden: Prof. Dr. I.S.A. Baud, Universiteit van Amsterdam
Prof. Dr. R.A. Boelens, Universiteit van Amsterdam
Prof. Dr. D. Huijema, Vrije Universiteit
Prof. Dr. C. Pahl-Wostl, University of Osnabruk
Prof. Dr. C.J.A.M. Termeer, Wageningen Universiteit

Faculteit der Maatschappij en Gedragswetenschappen

LIST OF FIGURES .................................................................................................................. 8
LIST OF TABLES ..................................................................................................................... 9
LIST OF ABBREVIATIONS ..................................................................................................... 11
ACKNOWLEDGEMENTS .......................................................................................................... 14
EXECUTIVE SUMMARY ......................................................................................................... 15
SAMENVATTING .................................................................................................................... 22

## 1. INTRODUCTION .............................................................................................................. 30
   1.1 PURPOSE ....................................................................................................................... 30
   1.2 IMPACTS OF CLIMATE CHANGE ON AGRICULTURE AND SOCIETY ....................... 31
   1.3 THE PROBLEM DEFINITION ..................................................................................... 32
      1.3.1 Nature of the problem ......................................................................................... 32
      1.3.2 Why adaptive governance is the best solution for the problem ......................... 33
      1.3.3 What we know and don’t know ......................................................................... 34
   1.4 THE RESEARCH QUESTIONS ...................................................................................... 36
   1.5 THE LITERATURE REVIEW ....................................................................................... 37
   1.6 THE CASE STUDIES .................................................................................................... 38
   1.7 FOCUS .......................................................................................................................... 39
   1.8 A CRITICAL REALIST APPROACH ........................................................................... 40
   1.9 INFERENCES ............................................................................................................... 41
   1.10 STRUCTURE OF THIS THESIS ............................................................................... 42

## 2. ADAPTIVE GOVERNANCE (MANAGEMENT, CO-MANAGEMENT AND ANTICIPATORY) .... 44
   2.1 INTRODUCTION ........................................................................................................... 44
   2.2 WHY ADAPTIVE GOVERNANCE? ............................................................................... 44
   2.3 DEFINING ADAPTIVE GOVERNANCE ........................................................................ 45
      2.3.1 Introduction .......................................................................................................... 45
      2.3.2 Evolution of adaptive governance ..................................................................... 45
      2.3.3 Comparing components of adaptive governance ............................................... 47
      2.3.4 Shortcomings of adaptive governance ................................................................ 52
   2.4 ENHANCEMENT OF ADAPTIVE GOVERNANCE ...................................................... 53
      2.4.1 Risk ....................................................................................................................... 53
      2.4.2 Model of adaptive governance and problem structuring ..................................... 55
      2.4.3 Adaptive governance and the split ladder of participation (inclusive development) .......................................................... 59
   2.5 GOALS OF ADAPTIVE GOVERNANCE ................................................................... 61
      2.5.1 Adaptive governance aims to (a) reduce the risk of d&f .................................... 61
      2.5.2 Adaptive governance aims to (b) increase livelihood capitals of agricultural producers .................................................................................. 62
      2.5.3 Adaptive governance aims to (c) enhance the adaptive capacity of institutions 63
   2.6 IMPLICATIONS OF ADAPTIVE GOVERNANCE FOR CLIMATE RELATED D&F RESEARCH ............................................................................................................. 64
3. METHODOLOGY: INSTITUTIONAL ANALYSIS AND ADAPTIVE GOVERNANCE .............. 66

10. CONCLUSION ........................................................................................................ 191
  10.1 Recalling research questions................................................................. 191
  10.2 Designing a policy framework to build rural agricultural producer capacity...... 192
    10.2.1 Address drivers and problems......................................................... 192
    10.2.2 Adopt appropriate missing instruments ........................................... 193
    10.2.3 Adopt effective instruments............................................................ 195
    10.2.4 Adopt instruments that build livelihood capital.............................. 196
    10.2.5 Disband or revise ineffective instruments........................................ 196
    10.2.6 Redesign based on ACW principles ................................................ 197
  10.3 Contribution to science ........................................................................... 198
    10.3.1 Uncertainty and risk........................................................................ 198
    10.3.2 Systemic nature of the problem....................................................... 199
    10.3.3 Complexity (contested values and science)...................................... 200
    10.3.4 A better theoretical framework to address poor governance............. 200
  10.4 Contribution to methodology .................................................................. 201
    10.4.1 Methodological strengths................................................................. 201
    10.4.2 Methodological challenges.............................................................. 201
    10.4.3 Recommendations for the future...................................................... 202
  10.5 The need for inclusive development ....................................................... 204
11. REFERENCES..................................................................................................... 207

Acknowledgements

Foremost, I would like to express my sincere gratitude to my promoter, Dr. Joyceta Gupta for her support, patience, motivation, enthusiasm and great knowledge she has contributed to this thesis, and my learning. Without her guidance and support this thesis would not have been completed. Also my sincere gratitude to my promoter, Dr. Hebe Verrest for her invaluable assistance, input and knowledge that helped strengthen and added depth to this research and thesis.

I thank all of my colleagues who have worked with me on the research projects listed on Appendix II and a special acknowledgement to the invaluable assistance of Jordan Harris (Adapt Chile), Roxana Borquez, PhD candidate, University of London, and Dr. Paula Mussetta (Conicet, Mendoza) who assisted me and contributed greatly to this research.

I wish to present my special thanks to my good friend and colleague, Dr. Harry (Polo) Diaz. Without his support and guidance this research in Latin America and Canada would not have taken place. His support through these years has been immense.

I would like to show my gratitude to my parents who have encouraged me in pursuing my education. I am sure I would never have made it here without the summers writing books with my father.

I would like to thank Marcel Heemskerk for the preparation of the case study maps, my family, my son Morgan Dynna for creating my figures, my son Michael Dynna, and my husband, Donald Stevens, for their support and understanding while I completed this thesis.
