Publisher: Universiteit van Amsterdam

Research from this thesis was carried out within the Department of Freshwater and Marine Ecology (FAME) of the Institute for Biodiversity and Ecosystem Dynamics (IBED) at the University of Amsterdam. This research was supported by the following research grants: the MacGillavry Fellowship and the Volkert van der Willigen Fund of the University of Amsterdam, the Koninklijke Nederlandse Akademie van Wetenschappen (KNAW) Ecology Fund, the Catharine van Tussenbroek Fund, the Treub-Maatschappij grant, the Society for Integrative and Comparative Biology, Women Divers Hall of Fame, the Phycological Society of America, and the National Science Foundation.

Extreme reef environments as natural laboratories - mechanisms
underlying coral acclimatization to future ocean conditions

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor

aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. P.P.C.C. Verbeek

ten overstaan van een door het College voor Promoties ingestelde
commissie,

in het openbaar te verdedigen in de Agnietenkapel

op donderdag 19 februari 2026, te 13.00 uur

door Sarah Leigh Solomon

geboren te Ohio

Promotiecommissie

Promotores:	Prof. dr. J. Huisman	Universiteit van Amsterdam
	Prof. dr. M.J.A. Vermeij	Universiteit van Amsterdam
Copromotores:	Dr. V. Schoepf	Universiteit van Amsterdam
	Dr. ir. J.M. de Goeij	Universiteit van Amsterdam
Overige leden:	Prof. dr. M. Ziegler	Justus-Liebig-Universität Giessen
	Dr. M. Wall	GEOMAR
	Prof. dr. M.H.S. Kraak	Universiteit van Amsterdam
	Prof. dr. W. Renema	Universiteit van Amsterdam
	Dr. P.M. Visser	Universiteit van Amsterdam
	Dr. R. Osinga	Wageningen University & Research

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

Table of Contents

Chapter 1	7
General Introduction	
Chapter 2	31
Seasonality modulates coral trophic plasticity in an extreme, multi-stressor habitat	
<i>Limnology and Oceanography</i> , 70 (5) : 1466-1480; doi: https://doi.org/10.1002/lno.70046	
Chapter 3	87
Stress resistant Symbiodiniaceae and diverse microbial communities promote coral persistence in variable, multi-stressor environments	
Chapter 4	149
Physiological mechanisms underlying coral acclimatization capacity to novel, multi-stressor conditions	
bioRxiv, doi: https://doi.org/10.1101/2025.05.08.652802	
Chapter 5	239
Caribbean corals increase their heat tolerance following transplantation into a warmer, multi-stressor habitat	
Chapter 6	308
Synthesis	
Samenvatting	331
Summary	337
Author Contributions	342
Curriculum Vitae	343
Acknowledgements	345
