# Contents

## Introduction

- 0.1 Algebraic curves and their moduli ........................................ 1
- 0.2 How rational is \( M_g \)? .................................................. 2
- 0.3 The Brill-Noether Theorem .................................................. 3
- 0.4 Outline of the results ....................................................... 4

## 1 The geometry of the moduli space of curves of genus 23

- 1.1 Introduction ................................................................. 7
- 1.2 Multicanonical linear systems and the Kodaira dimension of \( M_g \)  8
- 1.3 Deformation theory for \( g^r_s \)'s and limit linear series ........... 10
- 1.4 A few consequences of limit linear series ............................. 15
- 1.5 The Kodaira dimension of \( M_{23} \) ...................................... 16
  - 1.5.1 The divisor \( \overline{M}_{32} \) ........................................ 17
  - 1.5.2 The divisor \( \overline{M}_{17} \) ........................................ 17
  - 1.5.3 The divisor \( \overline{M}_{20} \) ........................................ 17
- 1.6 The slope conjecture and \( M_{23} \) ...................................... 26

## 2 The geography of Brill-Noether loci in the moduli space of curves

- 2.1 Introduction ................................................................. 29
- 2.2 Deformations of maps and smoothing of algebraic space curves .... 30
- 2.3 Linear series on \( k \)-gonal curves ...................................... 32
- 2.4 Existence of regular components of moduli spaces of maps to \( \mathbb{P}^1 \times \mathbb{P}^r \) 36
- 2.5 The gonality of space curves .......................................... 42
  - 2.5.1 Preliminaries ........................................................... 42
  - 2.5.2 Linear systems on smooth quartic surfaces in \( \mathbb{P}^3 \) ....... 44
  - 2.5.3 Brill-Noether special linear series on curves on \( K3 \) surfaces 45
  - 2.5.4 The gonality of curves on quartic surfaces ...................... 47
- 2.6 Miscellany ................................................................. 53

## 3 Divisors on moduli spaces of pointed curves

- 3.1 Introduction ................................................................. 57
- 3.2 The Picard group of the moduli space of pointed curves .......... 59
3.3 Counting linear series on curves via Schubert calculus ........................................... 60
3.4 Divisors on $\overline{M}_{g,1}$ ....................................................................................... 61
3.5 A divisor on $\overline{M}_{g,2}$ ....................................................................................... 67
3.6 The divisor of curves with two triple ramification points .............................................. 70
  3.6.1 Counting pencils with two triple points ............................................................... 71
  3.6.2 A divisor class on $\overline{M}_{2,1}$ ........................................................................ 73
  3.6.3 The class of the divisor $\overline{T_R}$ ..................................................................... 74
3.7 The Kodaira dimension of the universal curve ............................................................... 75

Bibliography  ................................................................................................................... 77
