

Supplementary Material

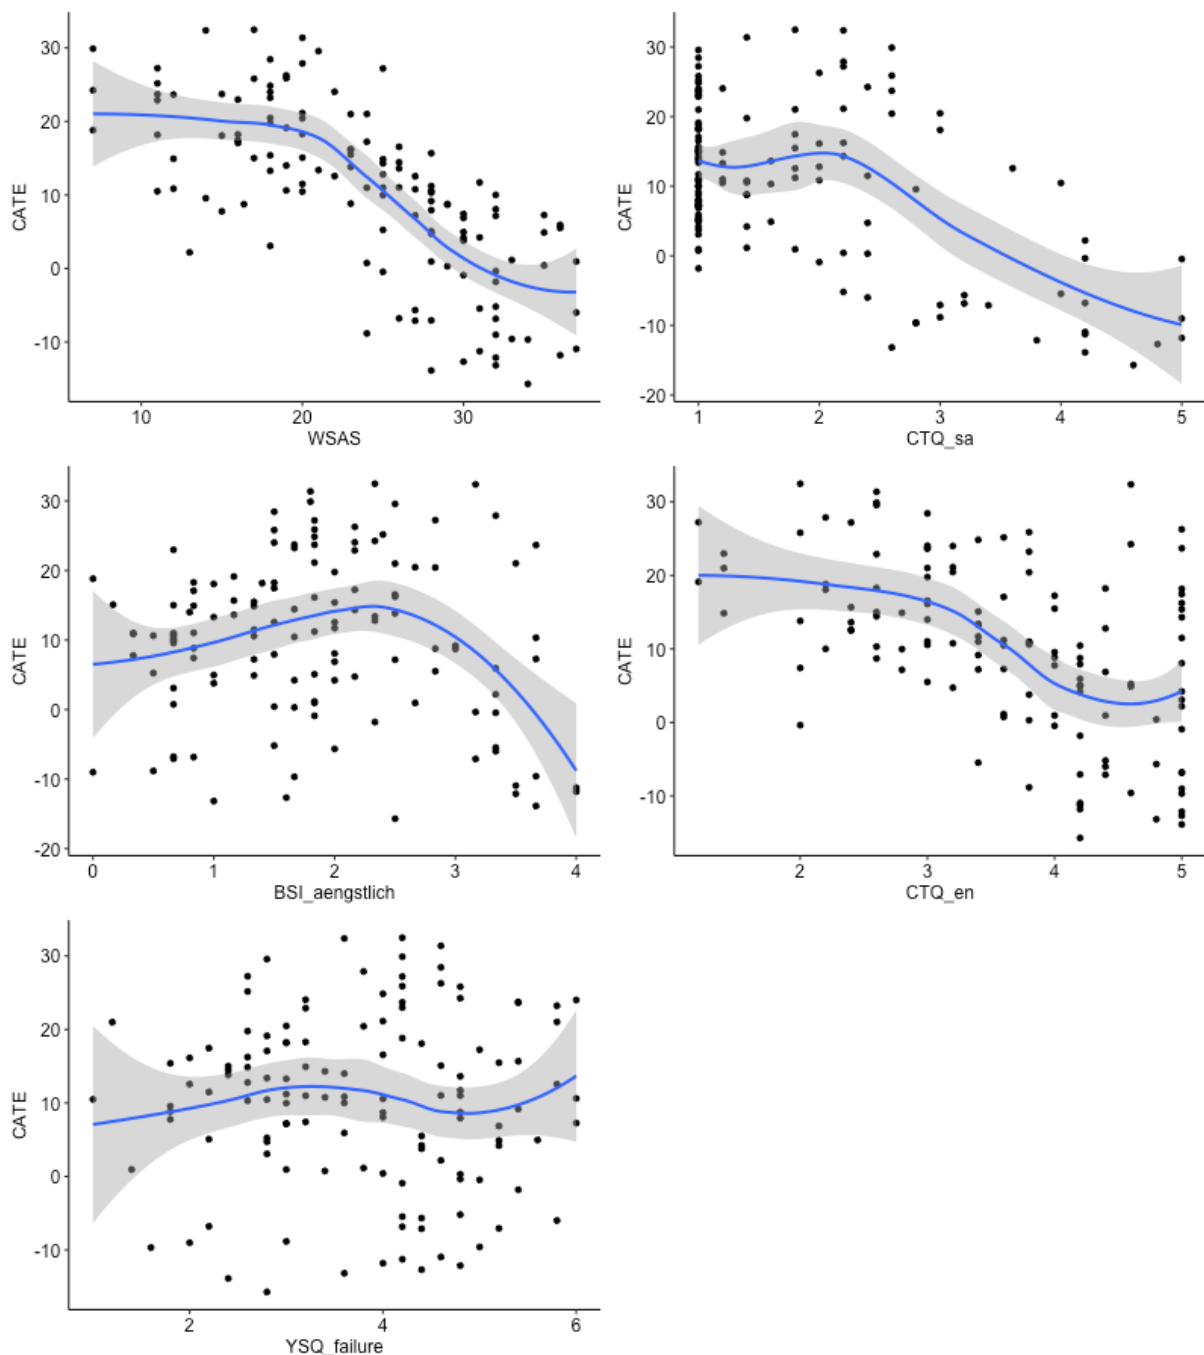

Figure S1. Graphical representations of the associations of individual predictors in the final model with CATE estimates. Positive CATE values favor DBT, negative values ST. Smoothed curves based on locally estimated scatterplot smoothing (LOESS) to accentuate non-linear associations.

CATE: conditional average treatment effect. DBT: Dialectical Behavioral Therapy. ST: Schema Therapy. WSAS: Work and Social Adjustment Scale. CTQ_sa: Childhood Trauma Questionnaire – Subscale Sexual Abuse. BSI_aengstlich: Brief Symptom Inventory – Subscale Anxiety. CTQ_en: Childhood Trauma Questionnaire – Subscale Emotional Neglect. YSQ_failure – Young Schema Questionnaire – Subscale failure.
