With thanks to

My co-promotor Marcel Teunissen, who helped me in many different ways: he taught me the basic principles of experimental dermatology, guided and supported me during the period of this research program, and made everything I wrote better. I express my gratitude to my promotor Prof. J.D. Bos for giving me the opportunity to work as a research fellow in his department and for his continuous support. Thanks are further extended to my co-promotor Menno de Rie who also contributed to my research activities.

The excellent technical assistance by Regien Sylva-Steenland was of immense importance to me during these studies. My gratitude also goes out to Cock Koomen, Arthur Kammeyer, Chris van der Loos, Gamze Pişkin, Satoshi Nakagawa, Evert Lamme, Marielle van Breemen and Mohamed El Haddouchi for their technical contributions. I am grateful to my friend Marcel Pasch who helped me in different ways, especially by being just a few months ahead with his thesis.

Also Pran Das deserves my special thanks for his involvement and continuous support. I would like to thank Bert Tiggers, Nike Classen and Cynthia Lehe for their technical guidance at the very beginning of my research in Amsterdam.

I am indebted to Robert Rodenburg and Wilfried Meun for their expertise and technical assistance with the figures and computer work. Jan-Willem van der Wal helped me out in several computer crashes. Wendy van Noppen is gratefully acknowledged for her critical reading of the thesis and correcting my English.

My gratitude and special thanks are also due to Prof. Fulvio Allegra and Prof. Alberto Alinovi who aroused my interest in dermatology. I would like to thank Annalisa Pelagatti, for whom the distance did not matter.

I am deeply indebted to my father who has always been caring and helpful in many aspects throughout my studies.

This thesis is dedicated to my mother, who died from cancer when still young. Without the memory of her this thesis would not have been born.

Thanks to you all, and to the many others whom I didn’t mention by name. There is a key to how I managed to write this thesis: it is you.
