Notes: the table presents estimates obtained estimating an alternative specification including time fixed effects. Standard errors, clustered at the country level, are in parenthesis. *, and ** denote significance at the 90 percent, and 1 percent confidence level, respectively. AEs and EMDEs stand respectively for advanced economies and emerging markets and developing economies. The sample of AEs comprises 38 countries and 908 observations. The sample of EMDEs comprises 57 countries and 751 observations.

Sources: Authors' estimation based on ILO Key Indicators of the Labour Market and *IMF World Economic Outlook*.

Youth men	-0.67**	-0.12	0.45	-0.29**	-0.06	0.11

Notes: the table presents estimates obtained estimating Equation (1) and using real GDP per capita to compute the output gap. For other notes and sources refer to Table D.1.

**Table D.3: Robustness checks on baseline specification
– WEO output gap**

	AEs			EMDEs		
	β	s.e.	R^2	β	s.e.	R^2
All working age	-0.31**	-0.04	0.39	-0.25**	-0.05	0.21

Notes: the table presents estimates obtained estimating Equation 5.1 and using the output gap as estimated in the *IMF World Economic Outlook*. AEs and EMDEs stand respectively for advanced economies and emerging markets and developing economies. The sample of AEs comprises 38 countries and 908 observations. The sample of EMDEs comprises 36 countries and 493 observations. For other notes and sources refer to Table D.1.
