You will be contacted as soon as possible.

Contents

1	Introduction and summary	5
1.1	Close binaries containing a compact object	6
1.1.1	Orbital period distribution	6
1.1.2	Mass transfer	7
1.1.3	Angular-momentum losses	8
1.1.4	The period gap	9
1.1.5	The minimum period	10
1.2	Low-mass X-ray binaries	10
1.2.1	Classification	11
1.2.2	Formation and evolution	12
1.2.3	Summary of results	13
1.3	Cataclysmic variables	14
1.3.1	Classification	14
1.3.2	Formation and evolution	15
1.3.3	Summary of results	16
I	Low-mass X-ray binaries	21
2	The optical counterpart of the Z source GX 349+2	23
2.1	Introduction	23
2.2	Observations and Analysis	23
2.3	Discussion	24
2.4	Conclusion	26
3	Coordinated X-ray and Optical observations of Sco X-1	29
3.1	Introduction	29
3.2	Observations	30
3.3	Results	31
3.4	Historical Walraven data	33
3.5	Conclusions	35
4	Phase-resolved spectroscopy of the atoll sources 1636-536/V801 Ara and 1735-44/V926 Sco	39
4.1	Introduction	39
4.2	Photometry	40
4.2.1	1636-536/V801 Ara	40
4.2.2	1735-444/V926 Sco	42
4.3	Spectroscopy	43
4.3.1	Average spectrum	43

4.3.2	Radial-velocity variations	44
4.4	Discussion	48
4.4.1	Emission from the bulge	48
4.4.2	A comparison of the two sources	49
II Cataclysmic Variables		53
5	Spin-up of the white dwarf in the intermediate polar BG CMi/3A0729+103	55
5.1	Introduction	55
5.2	Observations and Reduction	56
5.3	The White Dwarf Spin Ephemeris	57
5.3.1	Deriving the ephemeris	57
5.3.2	Comparison with previous work	58
5.4	The Orbital Ephemeris	61
5.5	Discussion	62
5.5.1	Accretion models	63
5.5.2	Comparison with the observed values of \dot{P} and μ	64
5.6	Conclusions	66
6	Periodicities in the optical brightness variations of the intermediate polar TV Columbae	69
6.1	Introduction	69
6.2	Observations and reduction	71
6.3	Results	71
6.3.1	The orbital period	71
6.3.2	The 5.2 hr photometric period	74
6.3.3	The 4 day photometric period	79
6.4	The 1911 sec X-ray period	80
6.5	Discussion	82
6.5.1	Long term brightness changes	82
6.5.2	Variations at the 4 day period	83
6.5.3	The outbursts	87
6.6	Summary	88
7	Time resolved spectroscopy of the dwarf nova VY Aquarii in superoutburst and quiescence	91
7.1	Introduction	91
7.2	Observations	92
7.3	The outburst spectra	92
7.3.1	Brightness variations	92
7.3.2	Radial velocity variations from Gaussian fits	95
7.3.3	Radial velocity variations from cross correlations	95
7.3.4	Variations of the system velocity	97
7.3.5	The emission component in the broad absorption lines	98
7.4	The quiescence spectra	98
7.4.1	Absorption components	98
7.4.2	Emission lines	99
7.5	The mass ratio and inclination	104
7.6	Discussion	108

8	A 59^m photometric period in the dwarf nova V485 Cen	111
8.1	Introduction	111
8.2	Observations and Analysis	111
8.2.1	Photometry	111
8.2.2	Spectroscopy	114
8.3	Discussion	115
8.3.1	A 1 hour rotation period of the white dwarf?	115
8.3.2	A 1 hour orbital period?	116
9	V485 Centauri: a dwarf nova with a 59^m orbital period	119
9.1	Introduction	119
9.2	Photometry	120
9.3	Spectroscopy	123
9.3.1	Observations and data reduction	123
9.3.2	Radial-velocity variations	124
9.3.3	The spectral distribution	130
9.4	System parameters	132
9.5	Discussion	133
9.5.1	Evolutionary considerations	133
9.5.2	The mass transfer rate	134
9.5.3	The secondary	135
10	Outline of a comparative study of disk and halo cataclysmic variables	139
10.1	Introduction	139
10.2	Halo and disk CVs	140
10.3	Discussion of the selection criteria	140
10.4	Our sample	151
10.5	High Galactic Latitude CVs revisited	151
10.6	Large-amplitude dwarf novae	153
	Samenvatting	155
	Dankwoord	159
