PREFACE

The present work would for certain not have become a reality without the support, help, and contribution of very many persons indeed. Not in the least, because all of the baseline information and raw data that is analyzed in the different chapters, was collected by others than me. It will not be for a lack of gratitude, if I may not come to thank by name at least each and everyone that was involved in the gathering of the data utilized here. It will not be for a lack of space either but - however poor an excuse that may seem - for gaps in my knowledge or holes in my memory. Therefore, to those who happen to be omitted in the ensuing paragraphs, I kindly ask to accept my humble apologies and my profound appreciation.

I am much indebted to Antoine Cleef for having offered me this opportunity to pursue my interests in scientific research and in plant ecology in particular. Also, the enthusiasm with which he dedicates himself to the study and conservation of the present-day vegetation of the tropics, has been most stimulating. Henry Hooghiemstra I want to thank especially for his many efforts to restrain me from wandering off side paths away from this final product. The comments and criticism of Joost Duivenvoorden on earlier drafts are much appreciated for having contributed substantially to improving the ecological dimension of this work.

The numerous people that participated in the fieldwork, soil laboratory analyses, voucher identifications, etc. of the Sumapaz-transect study of the ECOANDES-project are gratefully acknowledged. Among those I am able to mention: Antoine Cleef and Guido van Reenen from the University of Amsterdam; Antonio Flórez, Reinaldo García, Pedro Rubio, and Sonia Salamanca from the Instituto Geográfico 'Agustín Codazzi' (Bogotá D.E.); Santiago Díaz, Roberto Jaramillo, María Murillo, and Orlando Rangel from the Universidad Nacional de Colombia (Bogotá D.E.); and Jean Claude Thouret from the Institut de Géographie Alpine (Grenoble). Sonia Salamanca and Orlando Rangel have also been most helpful in resolving questions regarding the vegetation relevé data of the Sumapaz-transect. A special thanks further goes to Reinaldo García and the people from the Empresa de Acueducto y Alcantarillado de Bogotá. Without their kind help, most of the air temperature and rainfall data from the climate stations in the surroundings of the Sumapaz-transect would not have been at my disposal.

A person to whom I am definitely very much obliged, is Thomas van der Hammen. Not only because he was one of the 'founding fathers' of the ECOANDES-project, but also because of the crucial role he played in obtaining access to the various Sumapaz-data. In addition, he kindly gave permission, and helped, to include in this research the rather unique data set that he, Roberto Jaramillo, and María Murillo collected in the late 1960s. Naturally, the latter two persons can equally count with my sincere gratitude.
From my former colleagues at the Hugo de Vries-Labatory, I especially want to thank Raymond Young, Guido van Reenen, and Bas Pels for their comments on prior versions, our lengthy discussions, and many good memories. To Jody dos Santos I am very thankful for the great help with organisational matters as well as for her support and friendship. Lex Wijmstra is gratefully acknowledged for having shared his critical points of view on many scientific themes, and Henk Witte for the help with computer-related matters in particular. For their share in what was a mostly pleasant and stimulating working environment, I still want to thank Vincent Wijninga, Jan Wolf, Annemarie Philip, Gerard Oostermeijer, Rob Bregman, Ben Oudejans, Herman Mommersteeg, Erica IJssel, Elly Berlinger, Bas van Geel, Ferry Houtman, and the late Gerald Noldus. The people from the library of the Anna's Hoeve are highly appreciated for their great assistance.

At the University of Aveiro, I am profoundly grateful to Prof. Celeste Coelho for her encouragement and for generously allowing me the time and freedom to finalize this thesis. Many thanks also go to António Ferreira and Fátima Alves for their continued interest and moral support.

Juan Carlos Berrio is gratefully acknowledged for his help with the summary in Spanish.

Mijn ouders wil ik allereerst van ganser harte bedanken dat ze me de gelegenheid hebben geboden om een universitaire opleiding naar eigen keuze en volgens eigen inzicht te volgen. Verder ben ik hen, oma Keizer, en mijn zusters Jen en San zeer dankbaar voor hun niet aflatende steun in de lange loop van dit onderzoek. Ook Anne en Henny, en Jan en Jannie ben ik in dit opzicht meer dan erkentelijk. À minha família Portuguesa agradeço todo o apoio e carinho.

It is unthinkable that I could have gotten this far without the love, companionship, and every support of my wife Luisa.
