The research presented in this thesis was conducted in the Molecular Biology and Microbial Food Safety (MBMFS) group at the Swammerdam Institute of Life Sciences (SILS), and the Computational Chemistry group at the van 't Hoff Institute for Molecular Sciences of the Faculty of Science, University of Amsterdam, The Netherlands. This work was supported by the China Scholarship Council (CSC, File No. 202109120009) and the MD simulations were performed on the Dutch National Supercomputer Snellius, contract NWO-2022.036.

mechanisms

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor

aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. P.P.C.C. Verbeek

ten overstaan van een door het College voor Promoties ingestelde commissie,

in het openbaar te verdedigen in de Agnietenkapel

op maandag 30 maart 2026, te 13.00 uur

door Longjiao Chen

geboren te Beijing

Promotiecommissie

<i>Promotores:</i>	prof. dr. S. Brul prof. dr. P. Setlow	Universiteit van Amsterdam The University of Connecticut
<i>Copromotores:</i>	dr. J. Vreede	Universiteit van Amsterdam
<i>Overige leden:</i>	dr. ir. I.M. Ilie prof. dr. S. El Aidy prof. dr. A.D.J. van Dijk dr. G. Christie prof. dr. D.Z. Rudner prof. dr. A. Aertsen	Universiteit van Amsterdam Universiteit van Amsterdam Universiteit van Amsterdam University of Cambridge Harvard University KU Leuven

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

CONTENTS

1 Introduction: Molecular switch of <i>Bacillus subtilis</i> spore germination	9
1.1 Bacterial spores	10
1.2 Categories of bacterial spores and the importance of endospores	11
1.3 Spore of the model bacterium <i>Bacillus subtilis</i>	12
1.4 Germination in the model bacterium <i>Bacillus subtilis</i>	14
1.5 Molecular apparatus in <i>Bacillus subtilis</i> spore germination	16
1.6 Towards understanding of GerAB function using Molecular Dynamics simulations and in vivo experiments	17
1.7 Outline of the study	19
2 Methods	21
2.1 Molecular modelling of GerAB structure and dynamics	22
2.1.1 Protein structural prediction	22
2.1.2 Molecular Dynamics simulations	23
2.1.3 Rare events and enhanced sampling	25
2.1.4 Steered Molecular Dynamics	26
2.1 Biological methods	27
2.2.1 Genome manipulation in <i>Bacillus subtilis</i>	27
2.2.2 Western Blot	28
2.2.3 Phase contrast microscopy	28
3 GerAB residues predicted to interfere with water passage based on Steered Molecular Dynamics are key to germinosome functionality	31
3.1 Introduction	32
3.2 Results	34
3.2.1. Key residue identification	34
3.2.2. Y97, L199 and F342 are important in the functionality of the germinosome	35
3.3 Discussion	40
3.4 Materials and Methods	41
3.4.1. Simulations and analysis	41
3.4.2. Mutagenesis	42
3.4.3. Sporulation and spore purification	43
3.4.4. Germination assay with phase contrast microscopy	43
3.4.5. Germination assay with optical density	44
3.4.6. Germination assay with DPA release	44
3.4.7. SDS-PAGE and immunoblotting	44

3.5 Supplementary information	46
4 GerAB Residues Predicted to Interact with Water Based on MD Simulations Mediate Germinosome Stability in <i>Bacillus subtilis</i> spores	49
4.1 Introduction	50
4.2 Result	52
4.2.1 Low amount of water passage occurred during MD simulations	52
4.2.2 Identification of residues interacting with passed water	54
4.2.3 High contact residue alteration alters water passage profile in simulation	55
4.2.4 High contact residue alteration impairs germination via structural disruption	58
4.3 Discussion	60
4.4 Methodology	61
4.4.1 MD simulations of GerAB-membrane systems	61
4.4.2 Water permeation analysis	62
4.4.3 Residue contact analysis	62
4.4.4 Mutagenesis	63
4.4.5 Sporulation and spore purification	64
4.4.6 Germination assay with phase contrast microscopy	64
4.4.7 Germination assay with optical density drop	64
4.4.8 Germination assay with DPA release	65
4.4.9 SDS-PAGE and immunoblotting	65
4.5 Supplementary Information	66
5 Decoding Dynamic Details of <i>Bacillus subtilis</i> Germinant Receptor Subunit GerAB with Molecular Simulations	69
5.1 Introduction	70
5.2 Result	71
5.2.1 C-terminal segment of TM6 gates water passage	71
5.2.2 Water passage gate opening with SMD	74
5.2.3 TMI bending at G25	76
5.2.4 L-alanine dissociates in MD simulations	76
5.2.5 L-alanine dissociation affects TMI conformation	77
5.3 Conclusion and Discussion	79
5.4 Methodology	83
5.4.1 Molecular Dynamics simulations	83
5.4.2 Analysis of MD simulations	84
5.4.3 Steered Molecular Dynamics simulations	86

5.4 Supplementary Information	87
6 Germination of <i>Bacillus</i> spores by LiCl	97
6.1 Importance	98
6.2 Introduction	98
6.3 Results	99
6.3.1 <i>Bacillus subtilis</i> spore germination with LiCl	99
6.3.2 Mechanism of <i>B. subtilis</i> spore germination with LiCl	100
6.3.3 Influence of other cations on LiCl germination	103
6.3.4 LiCl-induced spore germination in other <i>Bacillus</i> species	105
6.3.5 <i>In silico</i> Li ⁺ interaction with GerAB	105
6.4 Discussion	109
6.5 Methods	111
6.5.1 Strains and spore preparation and purification	111
6.5.2 Measurement of spore germination	112
6.5.3 Molecular Dynamics simulations of GerAB-membrane system under different ion condition	113
6.5.4 GerAB-cation interaction analysis	114
6.5.5 GerAB water passage analysis	114
6.5.6 GerAB structural fluctuation analysis	115
6.6 Supplementary Information	116
7 Combining <i>in silico</i> and <i>in vivo</i> Approaches: A Multidisciplinary Practical Module for Undergraduate Students	119
7.1 Introduction	120
7.1.1 Multidisciplinary training in biological research	120
7.1.2 Research background	120
7.1.3 Course implementation	122
7.1.4 Learning outcomes	124
7.2 Practical exercises content	125
7.2.1 Structure of the course research project	125
7.2.2 Part A: protein structure prediction and simulation system preparation	125
7.2.3 Part B: MD trajectory analysis with VMD	128
7.2.4 Part C: Experimental verification with phase contrast microscopy	133
7.3 Student performance and course assessment	135
7.3.1 Module implementation and supervision	135
7.3.2 Student assessment	135

7.3.3 Student feedback	135
7.4. Material preparation	137
7.4.1 Software preparation	137
7.4.2 Laboratory equipment and materials	137
7.5 Conclusions and future directions	139
7.5.1 Summary of outcomes	139
7.5.2 Possible improvements for future course iterations	139
7.5.3 Final thoughts	140
8 Discussion	143
8.1 Water “channel”	143
8.2 TM dynamics	145
8.3 Bigger picture	146
9 Summary	147
10 Samenvatting	150
Acknowledgments	155
List of Publications	159
Bibliography	161
