Contents

1 Introduction  .................................. 1
  1.1 Early universe .................................. 1
  1.2 Some dynamical processes in the early universe ............ 2
  1.3 Classical approximation .............................. 3
  1.4 Preview ........................................... 6

2 Classical field theory  ................................ 9
  2.1 Introduction ....................................... 9
  2.2 Thermal field theory ................................. 9
  2.3 Soft and hard modes .................................. 11
  2.4 High-temperature behavior ............................ 13
  2.5 Dimensional reduction ............................... 16
  2.6 Classical theory .................................... 18
  2.7 Hot, classical Feynman rules ......................... 21

3 Hard thermal loops ................................... 27
  3.1 Introduction ....................................... 27
  3.2 HTL self-energy ..................................... 28
  3.3 Vlasov equation ..................................... 31
  3.4 Statistical HTL theory ............................... 33
  3.5 Stochastic HTL equation ............................. 35
  3.6 Consistency of stochastic HTL theory .................. 38
  3.7 Non-Abelian HTL's .................................. 40
  3.8 Plasmons ........................................... 41
  3.9 Non-perturbative excitations ......................... 43
  3.10 Summary ........................................... 46

4 Divergence structure of hot, real-time classical field theory 49
  4.1 Introduction ....................................... 49
### 4.2 One-loop
- 4.2.1 Linear divergences: classical HTL’s
- 4.2.2 No logarithmic divergences
- 4.2.3 Classical self-energy: explicit result

### 4.3 Two-loop and beyond
- 4.3.1 Degree of divergence
- 4.3.2 Two-loop self-energy diagrams
- 4.3.3 Higher-order vertex functions
- 4.3.4 Other gauges

### 4.4 Discussion

### 4.5 Transversality of the log divergent part of the self-energy

### 4.6 Conclusion

### 4.7 Gauged invariant cut-off in the classical theory

### 4.8 Classical one-loop SU($N$) self-energy: explicit calculation

### 4.9 Two loop naively linear divergent contributions

### 5 Counterterms for linear divergences
- 5.1 Introduction
- 5.2 Cut-off dependence
- 5.3 Effective theory with counterterms
- 5.4 Continuum
- 5.5 Perturbative renormalization on a lattice
  - 5.5.1 Static
  - 5.5.2 Real-time
- 5.6 Two stable lattice models
  - 5.6.1 Model with lattice dispersion relation
  - 5.6.2 Model with a continuum dispersion relation
- 5.7 Conclusion

### 6 Baryon-number generation in the broken phase
- 6.1 Introduction
- 6.2 Sakharov requirements
- 6.3 Sphaleron transitions
  - 6.3.1 Including a baryon density
- 6.4 Effect of CP-violation on the rate
  - 6.4.1 Asymmetry
  - 6.4.2 Alternative derivation
  - 6.4.3 Numerical check
  - 6.4.4 Some remarks on an asymmetric distribution function
