Acknowledgments

First and foremost, I would like to thank Michiel van Lambalgen, who gave me a position as a Logic PhD student, kept on supporting me and being interested even when I wandered into completely different fields of mathematics, and when I went through a motivational crisis, found people I could work with on my own terms. Without him, this thesis would not have been written.
Tony Martin, Mike Keane and Pieter Adriaans each gave me questions to work on, and to a greater or lesser extent helped shape the answers. If not for them, this thesis might have had only one subject. :-)
In no particular order, I would also like to thank Alex Heinis, Robert Maas, Dick de Jongh, Nikos Massios, Carlos Areces, Wendy de Leeuw, Marco de Vries, Judith Keijsper, Rosalie Iemhoff, Annette Bleeker, Ingrid van Loon, Joost J. Joosten, Renata Wassermann, Gertjan van der Hoeven, and anyone else I might have forgotten, for making work interesting, and for being interested in my work.
Last but not least, I would like to thank my parents, both for giving me solid ground to stand on, and for allowing me to make my own mistakes.
