Input and interaction in deaf families

van den Bogaerde, B.

Citation for published version (APA):
LIST OF TABLES AND FIGURES

Tables
Table 1.1 Overview of number of utterances in 10 minutes of input in Dutch, English, American Sign Language (ASL), British Sign Language (BSL) and English and signing combined
Table 1.2 Noun ratios found by Gillis & Verlinden (1988) and Tardif et al. (1996) in the input and the output of Dutch, English, Italian and Mandarin speaking parents and their children at approximately age 2;0
Table 4.1 Exact ages of the children at the different filming session grouped per age as referred to in this study. Number of session in brackets
Table 4.2 Averaged percentages of agreement on transcription measures for the deaf mothers and the children
Table 4.3 Averaged percentages of agreement on intelligibility of signs and words for the deaf mothers and the children
Table 4.4 Liberal Kappa for transcription of whether or not signs are seen (+) or not (-) at the different points in time
Table 4.5 Liberal Kappa for transcription of whether or not words are seen (+) or not (-) at the different points in time
Table 4.6 Liberal Kappa for transcription of whether or not words are voiced (+) or not (-) at the different points in time
Table 5.1 INPUT DC+HC: Number of vocalizations by the deaf mothers
Table 5.2 OUTPUT DC+HC: Number of movements and vocalizations produced by the deaf and hearing children
Table 5.3 INPUT DC+HC: Total number of linguistic utterances produced by the deaf mothers
Table 5.4 Number of utterances in studies on Dutch input by hearing mothers to hearing children
Table 5.5 OUTPUT DC+HC: Total number of linguistic utterances produced by the deaf and hearing children in 10 minutes of interaction
Table 5.6 Number of Dutch utterances produced in 10 minutes by hearing children around 2 years of age
Table 5.7 OUTPUT DC+HC: Proportional contribution to the conversation in linguistic utterances by the children
Table 6.1 INPUT HC: Strategies for attention used by Jonas' mother at 1;6
Table 6.2 INPUT DC+HC: Preferred strategy for attention by the deaf mothers
Table 6.3 INPUT DC+HC: Number and (%) of strategy A' used by the deaf mothers
List of tables and figures

Table 6.4  OUTPUT DC+HC: Number and (%) of words produced with voice by the hearing children in NL and SC utterances

Table 6.5  OUTPUT DC: Number and (%) of words produced with voice by the deaf children in NL and SC utterances and signs produced with a vocalization in SLN and SC

Table 7.1  OUTPUT DC+HC: First representational symbols of the children

Table 7.2  INPUT DC+HC: Noun ratios (tokens) in SLN, NL and SC input of the deaf mothers at age 2;0 of the children (N / (N+V))

Table 7.3  OUTPUT DC+HC: Noun Ratio (tokens) in SLN, NL and SC in the output of the deaf and hearing children at age 2;0

Table 7.4  INPUT DC+HC: Number and (%) of repeated sign types and total number of signs of the mothers, pooled over time

Table 7.5  INPUT DC+HC: Number and (%) of repeated word types and total number of words of the mothers

Table 7.6  OUTPUT DC: TTR for signs

Table 7.7  OUTPUT DC+HC: Number and (%) of repeated sign types and total number of sign types of the children

Table 7.8  OUTPUT HC: TTR for words

Table 7.9  OUTPUT DC+HC: Number and (%) of repeated word types and total number of word types of the children

Table 7.10 INPUT DC+HC: Highest % of lexical equivalence of the deaf mothers across all points in time

Table 7.11 OUTPUT DC+HC: Highest % of lexical equivalence of the children across all points in time

Table 8.1  INPUT DC + HC: Number and (%) of subcategories Q, Q1, Q2 and Q3 in signed and spoken Interrogative sentences of the deaf mothers, pooled over time

Table 8.2  INPUT DC+HC: Number and (%) of subcategories I, I1, I2 and I3 in Imperative utterances of the deaf mothers, pooled over time.

Table 8.3  INPUT DC+HC: Percentages and (number) of affective utterances as distributed across the signed and spoken input of the deaf mothers

Table 9.1  INPUT DC: SLN-MLU of the deaf mothers with the deaf children

Table 9.2  INPUT HC: NL-MLU of the deaf mothers with the hearing children

Table 9.3  INPUT: MLU in words of Dutch hearing adults to hearing children

Table 9.4  OUTPUT DC+HC: SLN-MLU in all children

Table 9.5  MLU's in ASL in children of different ages

Table 9.6  OUTPUT HC: NL-MLU's in the output of the hearing children

Table 9.7  MLU and MLUL10 (in words) of Dutch hearing children at different ages

Table 9.8  OUTPUT DC+HC: Number and (%) of SLN and NL utterances containing a verb

xiv List of tables and figures

Table 9.27  OUTPUT DC+HC: Number and (%) of markers on nouns (N) and adjectives (A) in NL and spoken SC utterances, pooled over time
Table 9.28  INPUT DC+HC: Number of various sign types in the SLN and signed SC input of the deaf mothers
Table 9.29  INPUT DC+HC: Number and (%) of function words in analyzable utterances in NL and spoken SC input of the deaf mothers
Table 9.30  OUTPUT DC+HC: Number and (%) of various sign types in the SLN and signed SC output of the children. Percentages are of total of these types
Table 9.31  OUTPUT DC+HC: Number and (%) of function words in analyzable NL and spoken SC utterances of the deaf and hearing children
Table 10.1  Overview of acquisition for SLN and signed SC and NL and spoken SC of the deaf and hearing children

Figures
Figure 1.1  Relation between input, uptake and intake
Figure 4.1  The four deaf mothers and their six children in this study
Figure 4.11  Schematic presentation of units of analysis
Figures 5.Ia-f  Language choice of the deaf mothers
Figure 5.IIa-f  Language choice of the deaf and hearing children
Figure 6.I  INPUT: Percentages of signs seen by the deaf and hearing children
Figure 6.II  INPUT: Percentages of words seen by the deaf children
Figure 6.IIIa  INPUT DC: Percentages of explicit strategies over all strategies used by the deaf mothers with the deaf children
Figure 6.IIIb  INPUT HC: Percentages of explicit strategies over all strategies used by the deaf mothers with the hearing children
Figure 6.IVa  INPUT DC and Response: Percentages of positive responses by the deaf children to strategy B (B: sign/speak while child is not looking at mother)
Figure 6.IVb  INPUT HC and Response: Percentages of positive responses by the hearing children to strategy B (B: sign/speak while child is not looking at mother)
Figure 6.Va  OUTPUT DC: Number of spontaneous looks of the deaf children at their mother in 10 minutes of interaction
Figure 6.Vb  OUTPUT HC: Number of spontaneous looks of the hearing children at their mother in 10 minutes of interaction
Figure 6.VIa  OUTPUT DC: Percentages of signs and MOVs seen by the deaf mothers of the deaf children.
Figure 6.VIb  OUTPUT HC: Percentages of signs and MOVs seen by the deaf mothers of the hearing children.
Figure 6.VIIa  OUTPUT DC: Percentages of words and vocalizations seen by the deaf mothers of the deaf children
Figure 6.VIIb  OUTPUT HC: Percentages of words and vocalizations seen by the deaf mothers of the hearing children
Figure 6.VIIIa  OUTPUT DC: Percentages of linguistic utterances made without a check for visual attention by the deaf children
Figure 6.VIIIb  OUTPUT HC: Percentages of linguistic utterances made without a check for visual attention by the hearing children
Figures 6.IXa-f  INPUT: Percentages of different categories of propositional content in the SC input of the deaf mothers
Figures 6.Xa-d  OUTPUT: Percentages of different categories of propositional content in the SC input of one deaf child and the hearing children
Figure 6.XIa-f  Relation (%) between the number of spontaneous looks of the children and the number of linguistic utterances of the deaf mothers
Figure 7.Ia  INPUT DC: Combinations of deictic and representational symbols of the mothers with the deaf children
Figure 7.Ib  INPUT HC: Combinations of deictic and representational symbols of the mothers with the hearing children
Figure 7.IIa  OUTPUT DC: Combinations of deictic and representational symbols of the deaf childrens
Figure 7.IIb  OUTPUT HC: Combinations of deictic and representational symbols of the hearing children
