## CONTENTS

**CHAPTER 1. GENERAL INTRODUCTION** ......................................................... 1

1.1 INTRODUCTION ...................................................................................... 3
1.2 AIMS OF THE STUDY ........................................................................... 7
1.3 OUTLINE OF THIS THESIS ................................................................. 7

**CHAPTER 2. LARYNGECTOMY** .................................................................. 11

2.1 INTRODUCTION ..................................................................................... 13
2.2 LARYNGEAL CANCER ........................................................................... 13
  2.2.1 Classification of laryngeal cancer .................................................. 13
  2.2.2 Demographics .............................................................................. 14
  2.2.3 Etiology ...................................................................................... 15
  2.2.4 Symptoms of laryngeal cancer ...................................................... 15
  2.2.5 Treatment of laryngeal cancer ...................................................... 15

2.3 TOTAL LARYNGECTOMY ..................................................................... 16
  2.3.1 Historical review ......................................................................... 16
  2.3.2 Anatomy ..................................................................................... 18
  2.3.3 Reconstructive surgery .................................................................. 22
  2.3.4 Radical neck dissection ................................................................. 23

2.4 VOICE REHABILITATION ...................................................................... 24
  2.4.1 Electrolaryngeal speech ................................................................. 24
  2.4.2 Esophageal speech ....................................................................... 25
  2.4.3 Tracheoesophageal speech ............................................................. 26
    2.4.3.1 Voice rehabilitation and characteristics of tracheoesophageal speech .................................................. 26
    2.4.3.2 Stoma occlusion ..................................................................... 29

2.5 THE NEOGLOSSIS .................................................................................. 30
  2.5.1 Localization and characteristics of the neoglottis ......................... 30
  2.5.2 Techniques to influence the tonicity of the neoglottis ................. 32
  2.5.3 The mechanism of tracheoesophageal voice production ............. 32

2.6 PHYSICAL AND PSYCHOSOCIAL CONSEQUENCES OF TOTAL LARYNGECTOMY ................................................................. 33

**CHAPTER 3. PATIENTS** ........................................................................... 41

3.1 INTRODUCTION ..................................................................................... 43
3.2 PATIENTS .............................................................................................. 43
3.3 SUBGROUPS FOR STATISTICAL ANALYSIS .......................................... 45

**CHAPTER 4. PERCEPTUAL EVALUATIONS** .............................................. 49

4.1 INTRODUCTION ..................................................................................... 51
4.2 PATIENTS AND METHODS .................................................................. 52
  4.2.1 Patients ...................................................................................... 52
  4.2.2 Speech material .......................................................................... 52
  4.2.3 Listening experiment .................................................................... 53
  4.2.4 Raters ......................................................................................... 53
  4.2.5 Rating scales ............................................................................... 54
  4.2.6 Statistical analyses ....................................................................... 56

4.3 RESULTS ............................................................................................... 57
  4.3.1 Reliability .................................................................................... 57
  4.3.2 Ratings ....................................................................................... 59
  4.3.3 Means for both rater groups ......................................................... 62
  4.3.4 Factor analysis ............................................................................. 62
  4.3.5 Reduction of scales ....................................................................... 64
  4.3.6 Scale judgments versus overall judgment .................................... 65
  4.3.7 Discriminant analysis ................................................................... 67
CHAPTER 5. ACOUSTIC ANALYSES AND THEIR RELATIONS TO PERCEPTUAL EVALUATIONS

5.1 INTRODUCTION

5.2 PATIENTS AND METHODS

5.2.1 Patients

5.2.2 Speech material/recording/processing

5.2.3 Acoustic signal typing

5.2.4 Acoustic analyses

5.2.5 Maximum phonation time

5.2.6 Statistical analyses

5.3 RESULTS

5.3.1 Acoustic signal typing

5.3.2 Acoustic measures

5.3.2.1 MDVP versus Praat

5.3.2.2 Acoustic analyses with Praat

5.3.3 Maximum phonation time

5.3.4 Acoustic signal typing versus acoustic measures and maximum phonation time

5.3.5 Acoustic signal typing versus perceptual evaluations

5.3.6 Acoustic measures versus perceptual evaluations

5.3.7 Maximum phonation time versus perceptual evaluations

5.3.8 Acoustic signal typing, acoustic measures and maximum phonation time versus sociodemographic and clinical factors

5.4 DISCUSSION

5.4.1 Acoustic signal typing

5.4.2 Acoustic measures

5.4.3 Maximum phonation time

5.4.4 Acoustic signal types versus acoustic measures and maximum phonation time

5.4.5 Acoustic signal typing versus perceptual evaluations

5.4.6 Acoustic measures versus perceptual evaluations

5.4.7 Maximum phonation time versus perceptual evaluations

5.4.8 Acoustic analyses versus sociodemographic and clinical factors

5.5 CONCLUSIONS

CHAPTER 6. ‘QUANTITATIVE VIDEOFLUOROSCOPY’: A NEW EVALUATION TOOL FOR TRACHEOESOPHAGEAL VOICE PRODUCTION

6.1 INTRODUCTION

6.2 PATIENTS AND METHODS

6.2.1 Patients

6.2.2 Videofluoroscopy

6.2.3 Speech recordings

6.2.4 Visual assessment of anatomical and morphologic characteristics of the neoglottis

6.2.5 Quantitative measurements of the neoglottis

6.2.6 Parameters measured
