Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Contents

1. General Introduction	7
1.1. Introduction	7
1.2. Outline of this thesis.	9
1.3. Low dimensional systems	11
1.3.1. Graphite based materials	11
1.3.1.1. Graphite intercalation compounds	11
1.3.1.2. Graphite foils	12
1.3.2. Low-dimensional semiconductor structures	12
1.3.2.1. InGaAs heterostructure	13
1.3.2.2. δ -doped materials	14
2. Magnetotransport properties	17
2.1. Classical magnetoresistance	17
2.2. Weak localisation	18
2.3. Strong localisation	19
2.4. Shubnikov-deHaas effect	23
2.5. Quantum Hall effect	25
3. Bandstructure of PdAl₂Cl₈ graphite intercalation compounds	29
3.1. The graphite intercalation compound: a carbon-based material	29
3.2. Synthesis of PdAl ₂ Cl ₈ GIC and experimental methods	32
3.3. Band structure model of acceptor-type graphite intercalation compounds	32
3.3.1. First stage	33
3.3.2. Second stage	34
3.3.3. Third stage	35
3.4. Results	36
3.5. Angle dependent magnetoresistance	41
3.6. Conclusions	46
4. Magnetotransport in carbon foils fabricated from exfoliated graphite	49
4.1. Introduction	49
4.2. Experimental	50
4.2.1. Sample preparation	50
4.2.2. Measuring techniques	51
4.3. Results	52
4.3.1. Structural parameters	52
4.3.2. Hall effect	53
4.3.3. Resistivity and magnetoresistance	54
4.4. Analysis	56

4.4.1. Hall effect	56
4.4.2. Resistivity and magnetoresistance	57
4.5. Discussion	65
4.6. Conclusions	65
5. Scaling in the quantum Hall regime	69
5.1. Introduction	69
5.2. The concept of scaling in the quantum Hall regime	70
5.3. An overview of the experiments on scaling in the quantum Hall regime	75
5.4. Magnetic field induced metal-insulator transition: an overview	78
5.5. Universality of σ_{xx}^* and ρ_{xx}^*	80
5.6. Scaling of the quantum Hall plateau-to-insulator transition in InGaAs	82
5.6.1. Probing the quantum Hall plateau-to-insulator transition	82
5.6.2. Scaling of the conductivities	83
5.6.3. A different approach to the PI transition	86
5.6.4. Origin of the different exponents	89
5.7. Crossover from classical to quantum transport	93
5.8. Conclusions	96
6. Magnetotransport in GaAs δ-doped with tin	101
6.1. Introduction	101
6.2. GaAs δ -doped with tin on singular substrates	103
6.2.1. Samples on singular substrate: experimental	103
6.2.2. Selfconsistent calculation of the subband energies	103
6.2.3. Experiments in perpendicular magnetic field	107
6.2.4. Experiments in parallel magnetic field	113
6.3. GaAs δ -doped with tin on vicinal substrates	116
6.3.1. Introduction	116
6.3.2. Samples on vicinal substrate.	117
6.3.3. Experiments in perpendicular magnetic field.	118
6.3.4. Experiments in parallel magnetic field.	122
6.4. Illumination effects in GaAs (δ -Sn).	124
6.4.1. Introduction	124
6.4.2. The DX centre.	126
6.4.3. Persistent photoconductivity results	128
6.4.4. Explanation of persistent photoconductivity.	132
6.5. Conclusions	137
Summary	143
Samenvatting	145
List of publications	149
Dankwoord	150

Contents

1. General Introduction

1.1 Introduction

1.2 Outline of this thesis

1.3 Low dimensional systems

1.3.1 Chain based materials

1.3.1.1 One-dimensional systems

1.3.1.2 Quasi-one-dimensional systems

1.3.1.3 Two-dimensional systems

1.3.2 Layer based materials

1.3.2.1 Two-dimensional systems

1.3.2.2 Quasi-two-dimensional systems

2. Magneto-optical properties

2.1 General introduction

2.2 Optical activity

2.3 Far- and Voigt effect

2.4 Magneto-optical Kerr effect

2.5 Quantum Hall effect

2.6 Spin Hall of light

2.7 Summary

2.8 Appendix

2.9 Bibliography

2.10 Index

2.11 Acknowledgements

2.12 Conclusions

2.13 Appendix

2.14 Bibliography

2.15 Index

2.16 Acknowledgements

2.17 Conclusions

2.18 Appendix

2.19 Bibliography

2.20 Index

2.21 Acknowledgements

2.22 Conclusions

2.23 Appendix

2.24 Bibliography

2.25 Index

2.26 Acknowledgements

2.27 Conclusions

2.28 Appendix

2.29 Bibliography

2.30 Index

*It is better to be roughly right,
than precisely wrong*
