Energy Conservation and Electricity Sector Liberalisation: towards a Green and Competitive Electricity Supply?

Slingerland, S.

Citation for published version (APA):
Contents

1. Introduction
   1.1 Research Objectives 2
   1.2 Outline of the Thesis 2

2. Method
   2.1 Energy Conservation 3
   2.2 Electricity Sector Liberalisation 5
   2.3 Country Selection 7
   2.4 Data Collection 8
   2.5 Evaluation 11
   2.6 Scope and Limitations 11

3. The Netherlands
   3.1 Dutch Electricity Supply 13
   3.2 Trends in Dutch Electricity Supply 15
   3.3 Energy Conservation 17
   3.4 Case 1: Cogeneration of Heat and Power – Industrial CHP 19
   3.5 Case 2: Renewables - Wind Energy 20
   3.6 Case 3: Demand Management - The MAP Levy 25
   3.7 The Future - Discussion and Conclusions 32

4. Denmark
   4.1 Method of Analysis 39
   4.2 Danish Electricity Supply 40
   4.3 Renewables: Wind Energy 41
   4.4 More Efficient Use of Fossil Fuels: Small-Scale Cogeneration 43
   4.5 Management of End-User Demand: Integrated Resource Planning 46
   4.6 Conclusions and Recommendations for Dutch Electricity Supply 48
### 9. Evaluation

9.1 Evaluation Results 143
9.2 Cogeneration 145
9.3 Wind Energy 151
9.4 Demand-Side Management 156
9.5 Discussion 162

### 10. Conclusions

10.1 Method 169
10.2 The Case Studies 171
10.3 Energy Conservation and Electricity Sector Liberalisation: Towards a Green and Competitive Electricity Supply? 180

### Postscript
