You will be contacted as soon as possible.

An artistic illustration featuring a whitefly on the left, perched on a green, segmented plant stem. The whitefly is depicted with a pale, segmented body, long antennae, and a small red eye. To the right of the whitefly, several stylized, green, phloem-based structures are shown, resembling vertical columns with rounded, bulbous tops. The background is a soft, light green gradient. The overall style is illustrative and scientific.

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. ir. P.P.C.C. Verbeek
ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Aula der Universiteit
op vrijdag 1 mei 2026, te 14.00 uur

door Lissy-Anne Maria Denkers
geboren te Haarlemmermeer

Promotiecommissie

The research described in this thesis was performed at the Plant Physiology department of the Swammerdam Institute for Life Sciences at the University of Amsterdam. The research for/publication of this doctoral thesis received financial assistance from NWO (ENPPS.LIFT.019.016) and Enza Zaden.

Table of content

Chapter 1	General introduction	7
Chapter 2	Specialised metabolites in the phloem and their role in plant-insect interactions	19
Chapter 3	A phloem-based defence mechanism linked to elevated riboflavin levels in wild tomato <i>Solanum chmielewskii</i> impedes whitefly nymphal development	43
Chapter 4	PhenoFeatureFinder: a python package for linking developmental phenotypes to omics features	79
Chapter 5	Specialised metabolites in the phloem of wild tomato are linked to impeded <i>Bemisia tabaci</i> nymphal development	115
Chapter 6	General discussion	153
