You will be contacted as soon as possible.

Contents

1 Introduction and Outline	1
1.1 Bounded Rationality	2
1.2 Theory of Nonlinear Dynamics	4
1.2.1 Nonlinear economic dynamics: a historical perspective	4
1.2.2 An example	6
1.3 Outline of the Thesis	11
2 A Tâtonnement Process	15
2.1 Introduction	15
2.2 Price adjustment models	16
2.3 The Model	25
2.3.1 Price normalization	25
2.3.2 Model specifications	27
2.3.3 Some typical numerical simulations	29
2.4 Symmetry	31
2.5 Local bifurcation analysis	35
2.5.1 Symmetry and the Jacobian matrix	35
2.5.2 Rotational symmetry and the Hopf bifurcation	38
2.5.3 Reflection symmetry and the period-doubling bifurcation	39
2.5.4 D_3 symmetry and the Equivariant Branching Lemma	40
2.6 Global dynamics	43
2.6.1 Symmetry-breaking and π -increasing bifurcations	43
2.6.2 Rotational symmetry	46
2.6.3 Reflection symmetry	48
2.7 A price adjustment process close to one with D_3 symmetry	51
2.8 Multiplicity of equilibria	54
2.8.1 Transcritical and saddle-node bifurcations: a case study	54
2.8.2 The continuous tâtonnement process	56

2.9 Summary and conclusions	57
3 Perfect Foresight Cycles in OG Models	59
3.1 The overlapping generations model	59
3.2 Equivalence	64
3.2.1 A cyclical exchange economy	64
3.2.2 An overlapping generations model	67
3.2.3 Equivalence of cycles and asymmetric equilibria	68
3.2.4 A special case: the two generations overlapping generations model and Sarkovskii's theorem	70
3.2.5 Extensions	72
3.3 Examples	76
3.3.1 A three generations overlapping generations model with CES utility functions	76
3.3.2 A two generations overlapping generations model with CARA util- ity functions	77
3.3.3 An example with two generations and capital	80
4 Learning in OG Models	83
4.1 Perfect foresight versus learning	83
4.2 The overlapping generations model	86
4.3 Static expectations	91
4.4 A regression on price levels	95
4.5 A regression on inflation rates – part I	100
4.6 A regression on inflation rates – part II	107
4.7 Summary	113
5 An Evolutionary Model of Cournot Competition	115
5.1 Introduction	115
5.2 The Model	118
5.2.1 Traditional Cournot Duopoly Analysis	118
5.2.2 Quantity Dynamics	120
5.2.3 Population Dynamics	122
5.2.4 Local Instability Results	128
5.3 A Typical Example: Best-Reply versus Rational Players	132
5.4 Local Bifurcation Analysis	133
5.4.1 Discrete Choice Dynamics	134

CONTENTS

5.4.2	Replicator Dynamics	140
5.5	Global Bifurcation Analysis	145
5.5.1	Homoclinic Bifurcation Theory	145
5.6	Another Example: Imitators versus Best-Reply Players	157
5.6.1	Discrete Choice Model	158
5.6.2	Replicator Dynamics	160
5.7	Concluding Remarks	162
5.8	Appendix	164
5.8.1	Derivation of Profit Functions	164
5.8.2	Equivalence of the Cournot and Cobweb Model	165
5.8.3	The Jacobian matrix	166
5.8.4	Some Important Curves	168
5.8.5	Diffeomorphisms	169
6	Price Adjustment in Monopolistic Competition	171
6.1	Introduction	171
6.2A	partial equilibrium model	173
6.2.1	Best-reply dynamics	175
6.2.2	Gradient systems	180
6.3A	short memory learning procedure	182
6.3.1	Examples: convergence	184
6.3.2	Example: nonconvergence	186
6.4A	long memory learning procedure	192
6.5	Concluding remarks	198
7	A Model of Political Business Cycles	201
7.1	Introduction	201
7.2	Minimum wages for high-skilled labour	203
7.2.1	The economic sphere	204
7.2.2	The political sphere	208
7.2.3	An extension to maximum wages for high-skilled labour	216
7.3	Minimum wages for low-skilled labour	218
7.3.1	The economic sphere	218
7.3.2	The political sphere	219
7.4	Discussion	223
	Bibliography	225

Samenvatting (Summary in Dutch)

145	5.2 Global Bifurcation Analysis	240
147	5.2.1 Homoclinic Bifurcation Theory	241
151	5.2.2 Another Example: Limit Cycles versus Hopf Bifurcation	245
153	5.2.3 The Global Bifurcation Diagram	247
155	5.2.4 Bifurcation Dynamics	250
157	5.2.5 Concluding Remarks	253
161	5.3 Appendix	257
161	5.3.1 Derivation of Poincaré Formulation	257
165	5.3.2 Evidence of the Coarse and Global Model	260
165	5.3.3 The Jacobian matrix	263
168	5.3.4 Some Important Curves	267
169	5.3.5 Discussion	270
171	6 Poincaré-Andronnikov in Rotational Systems	271
171	6.1 Introduction	271
173	6.2 A partial equilibrium model for the dynamics	273
175	6.2.1 Rotational dynamics	275
175	6.2.2 Gradient systems	275
179	6.3 A short memory learning procedure	279
181	6.3.1 Example: convergence	281
181	6.3.2 Example: nonconvergence	281
183	6.4 A long memory learning procedure	283
183	6.5 Concluding remarks	283
183	6.6 Acknowledgements	283
183	6.7 References	283
183	6.8 Appendix	283
183	6.8.1 Introduction	283
183	6.8.2 Minimum wages for high-skilled labour	283
183	6.8.3 The economic sphere	283
183	6.8.4 The political sphere	283
183	6.8.5 An extension to the labour market	283
183	6.8.6 Minimum wages for low-skilled labour	283
183	6.8.7 The economic sphere	283
183	6.8.8 The political sphere	283
183	6.8.9 Discussion	283
183	6.8.10 Bibliography	283
