Contents

1	Introduction	1
1.1	Complex Systems simulation	1
1.2	Computation in Dynamic Complex Systems	5
1.2.1	Universal Computing	5
1.2.2	Cellular Automata	6
1.2.3	Computing and Simulation	11
1.3	Intractability and undecidability in some Physical Systems	15
1.3.1	Optical Beam Tracing	16
1.3.2	N-body Simulation	17
1.3.3	Non Equilibrium Growth Processes	18
1.4	Speculation: Computing at The Edge of Chaos	22
1.4.1	Phase transition in CA	23
1.5	Conclusions	26
1.6	Outline of this thesis	27
2	P-CAM: A Framework For Parallel Complex Systems Simulations	29
2.1	Introduction	29
2.2	A Parallel Complex Systems Simulation Environment	31
2.2.1	Decoupling decompositions, virtual particles and execution models	31
2.2.2	Task interaction graphs and update functions	32
2.2.3	Decomposing task graphs	34
2.2.4	Data structure	34
2.2.5	Cell migration	37
2.2.6	Cell annihilation/creation	37
2.3	Dynamic Load Balancing	37
2.3.1	Load Balancing	39
2.3.2	Cell Selection: Prerequisites	43
2.3.3	Graph Based Selection Methods	45
2.3.4	Center Of Mass Based Selection Methods	47
2.3.5	Edge Smoothing	48
2.3.6	Cell Migration	49
2.3.7	When to Balance?	49
2.4	Conclusions	50

3	On the Complexity of Task Allocation	53
3.1	Introduction	53
3.1.1	Phase transitions in combinatorial optimization	54
3.2	The Task Allocation Problem	55
3.2.1	Random task graphs	56
3.2.2	TAP Hamiltonian	56
3.2.3	Simulated Annealing	57
3.3	TAP phase space structure	60
3.3.1	Configuration space	61
3.3.2	Random walk relaxation	62
3.3.3	Auto correlation function	62
3.3.4	Discussion	66
3.4	Phase transition in Simulated Annealing	66
3.4.1	Information theoretic measures	67
3.4.2	Experimental results	69
3.5	TAP phase transition	71
3.5.1	TAP extremes	71
3.5.2	Locating the transition	72
3.5.3	Critical slowing down	73
3.5.4	Finite size scaling	73
3.5.5	Spatial mutual information	74
3.6	Experimental results	74
3.6.1	Correlation length and statistical quantities	74
3.6.2	TAP phase transition	76
3.6.3	Fully connected task graphs	83
3.7	Experimental validation of the TAP phase transition	85
3.7.1	Meta modeling with P-CAM	86
3.7.2	“Physical” optimization	86
3.7.3	Experimental results	87
3.7.4	Discussion	88
3.8	Conclusions	90
4	Task Allocation by Parallel Evolutionary Computing	93
4.1	Introduction	93
4.2	Genetic Algorithms	94
4.2.1	Selection	96
4.2.2	Recombination	96
4.2.3	Convergence	97
4.3	Parallel Evolutionary Algorithms	97
4.3.1	An Abstract Cellular Genetic Algorithm	98
4.3.2	ACGA instances	98
4.3.3	An ACGA implementation: Parallel MAP	101
4.3.4	Locality in CGA	101
4.3.5	Allocating a Finite Element grid	102
4.3.6	Time complexity	104
4.4	The Task Allocation Problem	105

4.4.1	Sequential and Parallel Optimal Allocation	106
4.5	Problem specific adjustments	107
4.5.1	CGA: cluster crossover	107
4.5.2	CSA and CSD: single task mutation	108
4.6	Experimental results and discussion	108
4.6.1	Uniform vs. Cluster crossover	109
4.6.2	Evolutionary strategies compared	112
4.7	Conclusions	115
5	Dynamic load balancing using P-CAM	117
5.1	Introduction	117
5.2	Dynamic Load Balancing in an Aggregation Process	118
5.2.1	A Particle Approach to Fluid Flow	118
5.2.2	Aggregation	124
5.2.3	Generating task graphs and decompositions	124
5.2.4	Experimental setup and results	124
5.2.5	Discussion	129
5.3	Parallel Finite Element Simulation	131
5.3.1	Cube based partitioning	132
5.3.2	Finite Element Simulation of an Underwater Explosion	132
5.3.3	Results	133
5.3.4	Discussion	139
5.4	Conclusions	141
6	Asynchronous Cellular Automata	143
6.1	Introduction	143
6.2	Cellular Automata Update Schemes	144
6.3	Parallel Update Schemes for Asynchronous CA Models	145
6.3.1	Conservative Parallel Discrete Event Simulation	146
6.3.2	Optimistic Parallel Discrete Event Simulation	147
6.4	Self Organized Criticality	148
6.5	SOC in PDES dynamics: experimental results	150
6.5.1	A first indication of Self Organized Criticality in Time Warp	152
6.5.2	Influence of lattice size	156
6.5.3	Varying the number of processors	158
6.5.4	Different virtual time window sizes	160
6.6	Conclusions	163
7	Discussion	165
	Bibliography	169
	Summary/Samenvatting	181
	Nawoord	189
	Publications	191

4.4.1. Behavioral and Translational Applications of the Model 107

4.4.2. Problem specific adjustments 107

4.4.3. Generalization of the model to other tasks 107

4.4.4. Experimental results and discussion of the model 108

4.4.5. Future work 108

4.5. Evolutionary strategies towards a behavior 110

4.5.1. Behavior vs. Cluster strategy towards a behavior 110

4.5.2. Evolutionary strategies towards a behavior 110

4.5.3. Conclusions 110

5. Dynamic load balancing using B-CAN 111

5.1. Introduction 111

5.2. Dynamic Load Balancing in an Aggregation Process 111

5.2.1. A Particle Aggregation Based Approach 111

5.2.2. Aggregation 111

5.2.3. Learning task graphs and dependencies 111

5.2.4. Experimental setup and results 111

5.2.5. Discussion 111

5.2.6. Conclusions 111

5.3. Particle Swarm Optimization 111

5.3.1. Particle based partitioning 111

5.3.2. Particle based partitioning 111

5.3.3. Particle based partitioning 111

5.3.4. Discussion 111

5.3.5. Conclusions 111

6. Asynchronous Cellular Automata 111

6.1. Introduction 111

6.2. Cellular Automata Update Schemes 111

6.3. Parallel Update Schemes for Asynchronous CA Models 111

6.3.1. Conservative Parallel Update Schemes 111

6.3.2. Optimistic Parallel Update Schemes 111

6.3.3. Asynchronous Criticality 111

6.3.4. BOC in FPGAs: dynamic experimental results 111

6.3.5. A test platform for the proposed CA models 111

6.3.6. Influence of lattice size 111

6.3.7. Varying the number of processors 111

6.3.8. Different virtual time window sizes 111

6.3.9. Conclusions 111

7. Discussion 111

8. Bibliography 111

9. Summary and Conclusions 111

10. Index 111

11. Publications 111
