You will be contacted as soon as possible.
# Contents

## I Introduction

1 Computer simulations in fluid dynamics
   1.1 Fluid dynamics ........................................... 3
   1.2 Computational fluid dynamics ............................... 5
   1.3 Lattice Gas hydrodynamics ................................ 7
   1.4 Research motivation and outline .......................... 10

## II Theoretical background

2 Theoretical background
   2.1 Lattice-Boltzmann models .................................. 13
   2.2 The general Lattice Boltzmann equation ..................... 14
   2.3 The Lattice-BGK model ..................................... 18
      2.3.1 Single time relaxation approximation ............... 18
      2.3.2 The first-order distribution function ................ 19
      2.3.3 Lattice symmetries .................................... 19
   2.4 The Navier-Stokes equations ................................ 20
   2.5 Regularly used LBGK models ................................ 21
   2.6 Taxonomy of LGA and LBM .................................. 22

## II Computational Methods

3 Boundary Conditions and checkerboard effects in Lattice-BGK models
   3.1 Introduction ............................................... 29
   3.2 The bounce-back boundary condition ........................ 30
   3.3 Comparison between body force and pressure boundaries .... 35
   3.4 Checkerboard effect in the $D_3Q_{14}$ and $D_3Q_{15}$ models 38
   3.5 Conclusions ............................................... 43

4 Iterative Momentum Relaxation for Fast Lattice-Boltzmann Simulations
   4.1 Introduction ............................................... 45
   4.2 The Iterative Momentum Relaxation (IMR) technique ........ 46
   4.3 Simulation results .......................................... 47
   4.4 Conclusions ............................................... 50
5 Load Balancing in Lattice-Boltzmann Simulations
  5.1 Introduction .......................................................... 53
  5.2 Parallel computing in complex flow simulations .............. 54
  5.3 Load balancing in a homogeneous workload distribution .... 55
    5.3.1 Slice and box decomposition .................................. 55
    5.3.2 Performance model and results ................................ 56
  5.4 Load balancing in a heterogeneous workload distribution ... 58
    5.4.1 Domain decomposition .......................................... 59
    5.4.2 Processor dependencies and performance results .......... 60
  5.5 Conclusions .......................................................... 62

III Validation and Applications

6 Lattice-Boltzmann and Finite-Element Simulations of Fluid Flow in a SMRX Mixer
  6.1 Introduction .......................................................... 67
  6.2 The Static Mixer Reactor .......................................... 68
  6.3 The Galerkin Finite-Element method ............................. 70
  6.4 Simulation results .................................................. 73
  6.5 Methodological Comparison ....................................... 81
  6.6 Conclusions .......................................................... 84

7 Hydraulic Permeability of Fibrous Media
  7.1 Introduction .......................................................... 87
  7.2 Permeability of (dis)ordered fibrous media .................... 88
    7.2.1 Background ..................................................... 88
    7.2.2 Description of the fibrous media ............................ 90
    7.2.3 Hydraulic Permeability as a function of the fiber volume fraction ................................................. 93
  7.3 The connection between the hydraulic permeability and the geometry of the media .............................................. 102
    7.3.1 The role of the fiber-fiber distance ......................... 103
    7.3.2 The fiber-fiber distance ..................................... 106
    7.3.3 Results ......................................................... 108
  7.4 The permeability of bounded fibrous media ..................... 110
    7.4.1 A bi-periodic array of cylinders ............................ 111
    7.4.2 Disordered media .............................................. 113
  7.5 Conclusions .......................................................... 115

8 General discussion ..................................................... 119

A Finite-Difference Lattice-BGK Methods on Nested Grids
  A.1 Introduction .......................................................... 121
  A.2 Background .......................................................... 122
  A.3 Numerical Discretization of the Boltzmann Equation .......... 123
