If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
# Contents

## I Introduction

1 Computer simulations in fluid dynamics .............................................. 3
1.1 Fluid dynamics ................................................................. 3
1.2 Computational fluid dynamics .................................................. 5
1.3 Lattice Gas hydrodynamics ..................................................... 7
1.4 Research motivation and outline .............................................. 10

## II Theoretical background

2.1 Lattice-Boltzmann models .................................................. 13
2.2 The general Lattice Boltzmann equation .................................. 14
2.3 The Lattice-BGK model ....................................................... 18
   2.3.1 Single time relaxation approximation .............................. 18
   2.3.2 The first-order distribution function .............................. 19
   2.3.3 Lattice symmetries .................................................... 19
2.4 The Navier-Stokes equations ................................................. 20
2.5 Regularly used LBGK models ................................................. 21
2.6 Taxonomy of LGA and LBM .................................................. 22

## II Computational Methods

3 Boundary Conditions and checkerboard effects in Lattice-BGK models ........ 29
3.1 Introduction ................................................................. 29
3.2 The bounce-back boundary condition ..................................... 30
3.3 Comparison between body force and pressure boundaries ................. 35
3.4 Checkerboard effect in the \( D_3Q_{14} \) and \( D_3Q_{15} \) models .......... 38
3.5 Conclusions .................................................................... 43

4 Iterative Momentum Relaxation for Fast Lattice-Boltzmann Simulations .... 45
4.1 Introduction ................................................................. 45
4.2 The Iterative Momentum Relaxation (IMR) technique ..................... 46
4.3 Simulation results ......................................................... 47
4.4 Conclusions .................................................................. 50
A.4 Nested grids ................................................................. 125
  A.4.1 Algorithm ............................................................... 125
  A.4.2 Grid coupling ......................................................... 126
A.5 Preliminary results ..................................................... 127
A.6 Conclusion and Future Work ......................................... 130

Bibliography ................................................................. 131
Summary ................................................................. 141
Samenvatting ............................................................. 145
Nawoord ................................................................. 149
Publications .............................................................. 153
