# Contents

## I Introduction

1 Computer simulations in fluid dynamics ........................................... 3  
1.1 Fluid dynamics .............................................................................. 3  
1.2 Computational fluid dynamics ....................................................... 5  
1.3 Lattice Gas hydrodynamics ............................................................. 7  
1.4 Research motivation and outline .................................................... 10  

## II Theoretical background

2.1 Lattice-Boltzmann models .............................................................. 13  
2.2 The general Lattice Boltzmann equation ........................................ 14  
2.3 The Lattice-BGK model .................................................................. 18  
  2.3.1 Single time relaxation approximation ....................................... 18  
  2.3.2 The first-order distribution function ......................................... 19  
  2.3.3 Lattice symmetries .................................................................. 19  
2.4 The Navier-Stokes equations .......................................................... 20  
2.5 Regularly used LBGK models ......................................................... 21  
2.6 Taxonomy of LGA and LBM ........................................................... 22  

## II Computational Methods

3 Boundary Conditions and checkerboard effects in Lattice-BGK models .................. 29  
  3.1 Introduction ................................................................................. 29  
  3.2 The bounce-back boundary condition ......................................... 30  
  3.3 Comparison between body force and pressure boundaries .......... 35  
  3.4 Checkerboard effect in the $D_3Q_{14}$ and $D_3Q_{15}$ models .......... 38  
  3.5 Conclusions ............................................................................... 43  

4 Iterative Momentum Relaxation for Fast Lattice-Boltzmann Simulations .......... 45  
  4.1 Introduction ................................................................................. 45  
  4.2 The Iterative Momentum Relaxation (IMR) technique ................. 46  
  4.3 Simulation results ........................................................................ 47  
  4.4 Conclusions ............................................................................... 50
## Contents

5 Load Balancing in Lattice-Boltzmann Simulations

5.1 Introduction ........................................ 53
5.2 Parallel computing in complex flow simulations ........ 54
5.3 Load balancing in a homogeneous workload distribution .... 55
  5.3.1 Slice and box decomposition ...................... 55
  5.3.2 Performance model and results ................... 56
5.4 Load balancing in a heterogeneous workload distribution .... 58
  5.4.1 Domain decomposition .......................... 59
  5.4.2 Processor dependencies and performance results .... 60
5.5 Conclusions ...................................... 62

III Validation and Applications

6 Lattice-Boltzmann and Finite-Element Simulations of Fluid Flow in a SMRX Mixer

6.1 Introduction .................................... 67
6.2 The Static Mixer Reactor .......................... 68
6.3 The Galerkin Finite-Element method .................. 70
6.4 Simulation results ................................ 73
6.5 Methodological Comparison ........................ 81
6.6 Conclusions ....................................... 84

7 Hydraulic Permeability of Fibrous Media

7.1 Introduction ..................................... 87
7.2 Permeability of (dis)ordered fibrous media ............ 88
  7.2.1 Background .................................... 88
  7.2.2 Description of the fibrous media ................ 90
  7.2.3 Hydraulic Permeability as a function of the fiber volume fraction ...................... 93
7.3 The connection between the hydraulic permeability and the geometry of the media ............ 102
  7.3.1 The role of the fiber-fiber distance .............. 103
  7.3.2 The fiber-fiber distance ....................... 106
  7.3.3 Results ....................................... 108
7.4 The permeability of bounded fibrous media ............. 110
  7.4.1 A bi-periodic array of cylinders ................ 111
  7.4.2 Disordered media ................................ 113
7.5 Conclusions ..................................... 115

8 General discussion .................................. 119

A Finite-Difference Lattice-BGK Methods on Nested Grids

A.1 Introduction ...................................... 121
A.2 Background ........................................ 122
A.3 Numerical Discretization of the Boltzmann Equation .... 123
Contents

A.4 Nested grids ......................................................... 125
  A.4.1 Algorithm .................................................. 125
  A.4.2 Grid coupling ............................................. 126
A.5 Preliminary results ............................................... 127
A.6 Conclusion and Future Work .................................... 130
