Acknowledgement

Writing this dissertation has been a challenge and a great learning opportunity to me. Learning from errors represented not only one important research project but turned out to be an intense personal experience throughout the whole process. Besides studying motivation directly there is almost no better way to learn something about motivation than finishing a Ph.D. project.

Many people have supported me in many different ways during this process. Sincerest thanks are given to them all!

First of all, I would like to thank Michael Frese and Sabine Sonnentag for their supervision and their professional support. I have learned immensely through their knowledge and scientific experience.

I would also like to thank the Universiteit van Amsterdam, who hosted me for almost three years as a 'gastmedewerker'. Many thanks go to the Ev. Studienwerk Villigst e.V. from whom I obtained a research grant for two years and to Dieter Lorenz, who let me convert his office at the Fachhochschule (Gießen/Friedberg) to a laboratory where I conducted the training experiment. I am indebted to more than 500 research participants for their time and effort.

All colleagues in Amsterdam and Gießen have been a very much appreciated source of support, inspiration, and fun. Special thanks to Bianca Beersma, Cathy van Dyck, Wendelien van Eerde, Harry Garst, Fieke Harinck, Muriel van der Ploeg, Olga Smit-Voskuil, Annelies van Vianen and Marcel Zandvliet. Without them learning from errors would not have been as successful and pleasant. Their hospitality made Amsterdam a second home for me.

My german colleagues welcomed me very friendly after almost three years of absence and made the transition as easy as possible. My thanks go to Doris Fay, Stefanie Krauss, Sabine Remdisch and Andreas Utsch.
I am grateful to Harry Garst and Doris Fay, who did the most competent job in helping me with my data analyses and in providing me with constructive comments on various stages of the manuscript. I would also like to thank Fieke Harinck and Bianca Beersma, who translated my summary into a 'samenvatting'.

I am very much indebted to my Paranimfen Fieke Harinck and Marcel Zandvliet for their great support while dealing with administrative and organizational requirements.

Continuous support, patience and invaluable encouragement came also from those people who were only indirectly involved in this project. I am grateful to my partner, my brother, my parents and my friends.
